SAMRUDHI AGENTIC AI

Enterprise Discovery, Operating Architecture & Transformation Blueprint

Blueprint v1.0

Executive thesis

Build Samrudhi as a predominantly AI-operated healthcare digital marketing enterprise, governed by a lean human Board, with a proprietary Agentic Operating System that continuously measures, evaluates and improves every agent's performance.

The defining difference between Samrudhi and a conventional AI-enabled agency should be that every operational function has five components:

- A clearly accountable agent.
- A defined workflow and measurable output.
- An explicit authority and permission boundary.
- An independent performance evaluation mechanism.
- A structured feedback and improvement cycle.

I would make Agent Performance Intelligence a core architectural layer, not an additional feature. An AI organisation without continuous evaluation risks becoming a network of agents producing activity without accountability. Samrudhi should instead operate like a measurable enterprise where every agent's contribution to revenue, delivery quality, turnaround, efficiency and customer satisfaction can be traced.

Technology environment

Google Workspace

Primary environment · Confirmed

Initial pilot

Content + Social

Production workflow · Confirmed

Confirmed versus proposed assumptions

Dimension	Status	Planning position
Business	Confirmed	Healthcare digital marketing services
Destination	Confirmed	Agentic-native agency with proprietary OS
Transition	Confirmed	Transform existing operations and clients
Governance	Confirmed	Human Board, agent-operated functions
Agent monitoring	Confirmed	Structured feedback

		and continuous efficiency evaluation
Initial pilot size	Proposed	2–3 consenting client accounts
Content workload	Assumed	120–200 deliverables/ month for modelling
Pilot team	Proposed	2–4 human contributors, potentially part-time
Infrastructure	Proposed	Cloud-based, modular, API-first
Initial automation target	Proposed	60–75% of eligible pilot workflow steps
Human review	Proposed	Mandatory for external publication during pilot

Part I — Enterprise operating model

2. Design principle: Agents as accountable digital resources

I propose three classifications of agents, with a fourth independent supervisory category.

Executive Superagents

Enterprise strategy, planning, prioritisation, delegation and performance oversight

Functional Agents

Own specific business functions and their measurable outcomes

Execution Subagents

Perform bounded tasks such as research, writing, checking, scheduling and reporting

Independent Evaluation & Assurance Agents

Observe all tiers, assess performance, detect failures and propose improvements

An important architectural choice: agents should not be allowed to grade their own work as the sole evidence of performance. Evaluators should use objective system records, independent checks, human review samples and downstream outcomes.

3. Complete organisation hierarchy

Level	**Proposed agent or human authority**	**Mandate**

L0	Human Board	Strategy, financial authority, governance, key relationships
L1	AI CEO	Enterprise coordination and executive reporting
L2	AI COO	Delivery, capacity, scheduling, SLAs
L2	AI CGO	Sales, marketing, pipeline and expansion
L2	AI CFO	Financial intelligence and commercial controls
L2	AI CCO	Creative, content and brand delivery
L2	AI CXO	Client experience, account performance and retention
L2	AI CTO	Architecture, infrastructure and AgentOps
L2 independent	AI Chief Assurance Agent	Evaluation, compliance monitoring, performance audits
L3	Functional agents	Department-level execution and accountability
L4	Subagents	Individual tasks and

specialist operations

The Chief Assurance Agent should report directly to the human Board for material risks, even if it shares operational findings with the AI CEO.

Initially, the executive roles should be logical software roles, not separate always-running models. They can be implemented through shared orchestration services and invoked only when needed.

Part II — Process inventory

4. Samrudhi's enterprise process architecture

I recommend mapping approximately 60–80 operational processes during discovery, grouped into ten domains.

The following is a proposed master inventory of 70 processes, not a claim that all are currently performed.

Domain	Processes	Count
Strategy & Management	Business planning, target setting, resource planning, KPI reviews, risk reviews, decision tracking, Board reporting	7
Sales & Growth	Prospect research, qualification, outreach, follow-up, discovery, proposals, pricing, contract coordination	8
Client Management	Onboarding, brief collection, account setup, client communications, review meetings, escalations, renewals, feedback	8
Content & Creative	Research, content strategy, calendar	12

	strategy, calendar, copy, creative brief, design, video scripting, QA, approval, scheduling, publishing, repurposing	
Social Media	Platform strategy, audience analysis, engagement monitoring, moderation, social listening, competitor benchmarking	6
Performance Marketing	Campaign planning, keyword research, audience targeting, setup, budget pacing, optimisation, attribution, reporting	8
SEO & Web	Technical audits, on-page SEO, content optimisation, website updates, conversion review, search performance	6
Data & Analytics	Data ingestion, validation, dashboards, insights, anomaly detection, monthly reporting	6

Finance & Administration	Invoicing, collections, expenses, vendor coordination, profitability reporting	5
Technology & AgentOps	Access management, workflow monitoring, agent evaluation, incident management	4
Total		70

Automation suitability

Not all 70 processes should have the same autonomy level.

High initial suitability

Relative suitability

Research, content drafting, brief generation, reporting, data consolidation

Moderate suitability

Relative suitability

Creative production, client coordination, campaign optimisation

Human-controlled

Relative suitability

Contracts, medical claims, payments, major budget decisions

The bars are qualitative design illustrations, not measured automation percentages.

Each process should be documented using a standard process record: trigger, inputs, owner, agent, tools, expected output, SLA, KPIs, permissions, exceptions, approval gate and feedback mechanism.

Part III — Agent registry and operational architecture

5. Proposed Agent Registry v1.0

We should maintain a central registry where every agent has a unique identity, purpose, capabilities, operating policies, reporting relationship and performance history.

The first release should contain approximately 18 agents, with executive roles introduced progressively.

Agent ID	Agent	Core responsibility	Deployment
EX-001	AI CEO	Executive orchestration and Board reporting	Phase 3

EX-002	AI COO	Delivery planning and resource allocation	Phase 2
EX-003	AI CCO	Content and creative leadership	Pilot
EX-004	AI CXO	Client experience and service oversight	Phase 2
AG-001	Client Context Agent	Read approved client briefs and brand information	Pilot
AG-002	Healthcare Research Agent	Source-backed topic and market research	Pilot
AG-003	Content Strategy Agent	Themes, objectives and campaign strategy	Pilot
AG-004	Content Calendar Agent	Monthly and weekly editorial calendars	Pilot
AG-005	Copywriting Agent	Social copy, captions, scripts and CTAs	Pilot
AG-006	Creative Brief Agent	Design instructions and	Pilot

		creative specifications	
AG-007	Creative Production Agent	Template-based artwork and production assets	Pilot
AG-008	Content QA Agent	Factual, language and brand checks	Pilot
AG-009	Publishing Agent	Schedule and publish authorised content	Pilot
AG-010	Social Analytics Agent	Collect and interpret platform performance	Pilot
AG-011	Client Reporting Agent	Performance reports and recommenda-tions	Phase 2
EV-001	Agent Performance Evaluator	Agent quality and efficiency evaluation	Pilot
EV-002	Workflow Efficiency Agent	Bottlenecks, cost and process analysis	Pilot
EV-003	Compliance & Audit Agent	Policy, security and audit monitoring	Pilot

The initial pilot therefore needs 14 active specialist, executive and evaluation roles, but these do not require 14 independently hosted models. Multiple roles can use the same underlying model with different permissions, tools, instructions and evaluation criteria.

Standard agent identity card

AG-005 · Copywriting Agent

Department: Creative & Content · Reports to: AI CCO

Primary outcome

Accurate, engaging, brand-compliant copy

Autonomy

Draft generation only

Inputs

Approved brief, client context, source material

Outputs

Captions, scripts, headlines, CTAs

Evaluation owner

EV-001 + human QA samples

Failure response

Revision, escalation or quarantine

Proposed performance KPIs

≥90%

First-pass acceptance target

≥95%

Brand compliance target

0

Unapproved clinical claims

Illustrative agent specification. Thresholds require baseline testing before enforcement.

The registry should additionally store the model version, prompt version, available tools, credential scope, owner, activation status, cost limits, evaluation history and rollback configuration.

Part IV — MCP and enterprise technology infrastructure

6. Proposed system architecture

Human Board Command Centre

Approvals · Client portfolio · Enterprise KPIs · Agent scorecards

Samrudhi Agentic OS — Control Plane

Agent registry · Identity · Policies · Task orchestration · Workflow state

Agent Runtime

Models, tool calls, agent delegation

Evaluation Runtime

Quality, efficiency, safety, regression tests

MCP Gateway & Integration Services

Tool discovery · Authentication · Scoped access · Action logging

Google Drive
Google Docs
Google Sheets
Gmail
Analytics
Social APIs
CRM
Design Tools
Accounting
Shared Data, Knowledge & Observability
PostgreSQL · Object storage · Retrieval · Logs · Metrics · Evaluation datasets

Recommended implementation stack

Layer	Initial recommendation	Rationale
Agent orchestration	LangGraph or comparable stateful agent framework	Explicit multi-step execution
Durable workflows	Temporal or managed workflow equivalent	Retries, recovery, approvals
MCP	Controlled MCP servers and gateway	Standardised tool access
Model services	Multi-model abstraction	Avoid dependence on one model
Core database	PostgreSQL	Structured business and workflow records
Knowledge retrieval	PostgreSQL with vector search initially	Client-specific contextual retrieval
File storage	Google Drive plus controlled cloud storage	Existing operating familiarity
Dashboard	Custom web application	Proprietary management experience

Observability	OpenTelemetry-compatible tracing and metrics	End-to-end visibility
Agent evaluation	Custom scorecards plus evaluation framework	Independent, repeatable assessment
Identity & secrets	Managed IAM and secrets service	Scoped access and credential rotation

These are architecture candidates, not procurement decisions. In a 1–10-person organisation, using managed infrastructure and minimising unnecessary components will be essential.

Initial MCP tool catalogue

Tool namespace	Allowed operations	Restrictions
client_context	Retrieve approved client data	Client-specific access
drive	Search and read authorised folders	No unrestricted Drive access
documents	Create and revise drafts	Version-controlled outputs
sheets	Read calendars and update status	Controlled ranges
gmail	Read authorised correspondence, draft replies	No autonomous external sending initially
social	Read metrics, prepare schedules	Publishing requires approval
analytics	Retrieve campaign results	Read-only initially
workflow	Create tasks, update statuses	State-transition rules
evaluation	Record scores and	Append-only audit

	feedback	history
approvals	Request and check human authorisation	Agents cannot self-approve

The OS should use a tool gateway to enforce permissions before any MCP-exposed action executes. Model instructions alone are not a security boundary.

Part V — Continuous Agent Performance Intelligence

7. The defining feature: Every agent is continuously evaluated

I recommend creating a proprietary subsystem named:

Samrudhi Agent Performance Intelligence — SAPI

Its purpose is to make agent performance transparent, measurable and continuously improvable.

SAPI should evaluate five dimensions.

Agent Performance Scorecard

Output quality

30%

Accuracy, completeness, brand alignment

Efficiency

25%

Time, cost and resource consumption

Reliability

20%

Completion, errors and recovery

Business contribution

15%

Acceptance, downstream results

Feedback & adaptability

10%

Correction response and sustained improvement

Proposed default weights. Domain-specific weights should differ for creative, analytical, executive and compliance agents.

Scoring methodology

Each dimension receives a score from 0–100.

\text{APS}=\sum_{i=1}^{5}w_i S_i

Where is the dimension score and is its weight.

However, the weighted score must never override critical safety gates. For example, an agent producing unauthorised medical claims or accessing another client's data must fail the relevant control regardless of its overall score.

Performance monitoring frequencies

Frequency	Evaluation activity	Response
Every execution	Input validity, output	Accept, retry, block or

	schema, tool errors, policy violations, cost and latency	escalate
Daily	Task completion, exceptions, costs, QA trends	Operational corrections
Weekly	Agent scorecards, workflow bottlenecks, human feedback	Improvement backlog
Monthly	Benchmark tests, prompt/model comparisons, business outcomes	Controlled version upgrades
Quarterly	Agent portfolio review, redundancy, ROI and architecture	Retire, redesign or expand agents

Continuous monitoring means collecting execution telemetry on every run, with evaluations triggered by defined events. It does not require every agent to remain running 24 hours a day.

8. Structured feedback architecture

Feedback should be captured from four sources.

Human Feedback

Approval, corrections, client satisfaction, reviewer notes

Independent Agent QA

Rubric scoring, factual checks, policy checks

System Telemetry

Latency, retries, tokens, failures, tool costs

Business Outcomes

Rework, campaign results, client acceptance, SLAs

Unified Feedback Ledger

Agent ID · Run ID · Client · Evaluator · Score · Evidence · Root cause

Agent Improvement Pipeline

Diagnose → Propose → Test → Approve → Deploy → Monitor

Standard feedback record

Each structured feedback event should contain:

Field	Example

Feedback ID	FB-2026-000124
Agent ID	AG-005
Execution ID	RUN-000875
Client ID	CLIENT-003
Evaluation type	Human content review
Dimension	Clinical accuracy
Score	65/100
Finding	Unsupported treatment outcome claim
Severity	High
Evidence	Source text and affected sentence
Root cause	Missing clinical source verification
Corrective action	Add source-validation step
Owner	AI CCO / Human QA
Status	Pending validation
Retest outcome	Not yet tested

This structure creates a reusable operational dataset instead of losing feedback inside emails and chat conversations.

9. Continuous improvement without uncontrolled self-modification

Agents should not independently rewrite their own production instructions, expand permissions or deploy untested changes.

I propose the following improvement lifecycle.

- Observe: Capture failures, scores, costs and reviewer corrections.
- Diagnose: Identify whether the cause is poor context, prompting, model capability, tooling, process design or human ambiguity.
- Propose: Generate a documented improvement request with expected impact.
- Test: Compare the proposed version against a fixed evaluation dataset and recent representative cases.
- Approve: Require human approval for material changes; low-risk changes may follow a preapproved release policy.
- Deploy: Release the new version to a limited percentage of workflows.
- Monitor: Compare quality, cost, latency and failures against the previous version; automatically roll back on defined breaches.

This gives us continuous improvement while preserving reliability and auditability.

Part VI — Pilot implementation: Content & Social Media

10. Pilot objective and scope

Pilot mission: Demonstrate that Samrudhi can manage a healthcare client's monthly content production lifecycle through an orchestrated AI workforce, with human oversight concentrated on approvals, exceptions and client relationships.

Proposed 90-day pilot

3
Client accounts

180-1 200
Monthly deliverables

14
Logical agent roles

90 days
Pilot duration

All quantities above are proposed pilot assumptions, not current Samrudhi production figures.

End-to-end workflow

- Client Context Agent: Retrieves approved brief, service offerings, brand guidelines, previous campaigns and content restrictions.
- Research Agent: Identifies content topics and verifies healthcare information against suitable sources.
- Content Strategy Agent: Proposes content pillars, audiences, messages and objectives.
- Calendar Agent: Produces a monthly editorial calendar with platform, format and deadline.
- Human Approval Gate 1: Account owner approves content direction and calendar.
- Copywriting and Creative Agents: Generate copy, design briefs, artwork and scripts.
- QA and Compliance Agents: Evaluate clinical accuracy, originality, brand fit and platform rules.
- Human Approval Gate 2: Qualified reviewer and authorised client contact approve the final material where required.
- Publishing Agent: Schedules authorised assets and records publication status.
- Analytics and Evaluation Agents: Measure performance, production efficiency, feedback and improvement opportunities.

Pilot exclusions

Initially exclude autonomous clinical advice, unsupervised patient testimonials, publishing without approval, direct handling of identifiable patient records, automatic responses to sensitive medical enquiries and unrestricted paid advertising changes.

For healthcare campaigns, we should prioritise educational content and avoid unsupported clinical outcomes or guarantees.

11. Pilot acceptance gates

The targets below are proposed. They should be calibrated after two weeks of baseline observation.

KPI	Proposed acceptance threshold
End-to-end workflow completion	≥95%

First-pass human acceptance	≥85% initially; ≥90% at pilot exit
Content delivered within SLA	≥95%
Reduction in median production cycle time	≥40%
Reduction in total cost per accepted deliverable	≥25%
Eligible workflow steps automated	≥60%
Complete execution and feedback logging	100%
Unauthorised publishing incidents	0
Critical privacy or clinical compliance incidents	0
Materially incorrect clinical claims reaching publication	0

Quality and safety are mandatory gates. Strong cost savings cannot compensate for a critical compliance failure.

Pilot performance simulator

Use the following illustrative model to see how human review and AI infrastructure costs affect the economics.

Monthly deliverables

160

Existing cost per deliverable

₹90

AI-assisted human review cost

₹30

Variable AI and tool cost per deliverable

₹12

Monthly fixed infrastructure cost

₹20,00

Existing monthly cost

₹14400

Agentic monthly cost

₹8720

Modelled cost reduction

39.4%

Meets the proposed 25% cost-reduction gate.
Reset assumptionsIllustrative steady-state delivery economics, excluding initial development, transition costs and exceptional rework. Replace inputs with actual Samrudhi data before making investment decisions.

Part VII — Governance and accountability

12. Human Board and Agent RACI

An AI agent can be responsible for execution, but legal and corporate accountability remains with humans.

R = Responsible, A = Accountable, C = Consulted, I = Informed.

Activity	Board / Human owner	AI CEO	Functional agent	Assurance agent
Business strategy	A	R	C	C
Monthly operating plan	A	R	R	C
Client onboarding	A	I	R	C
Content production	A	I	R	C
Clinical content approval	A	I	C	R (checks)
Publishing approved assets	A	I	R	C
Perfor-mance monitoring	A			
Agent improve-ment	A			

ment proposals				
Model or prompt deployment	A	I	R	C
Budget and payments	A	C	R (preparation)	C
Security incident response	A	I	R (contain-ment)	R (detection)

Here, the human accountable party may be a delegated manager rather than the entire Board for routine work. The Board should reserve its attention for strategic, material financial and high-risk matters.

Governance cadence

Cadence	Meeting or report	Primary purpose
Continuous	Automated execution monitoring	Detect errors and policy violations
Daily	AI CEO operational brief	Output, delays, costs, escalations
Weekly	Human Operations Review	SLAs, quality, agent scorecards
Monthly	Board Performance Review	Revenue, margins, client health, ROI
Quarterly	Agent Governance Review	Agent retirement, upgrades, permissions, architecture

Part VIII — Implementation resources and costs

13. Lean transformation team

For Samrudhi's current size, a large implementation department would be counterproductive.

Role	Allocation	Responsibility

Executive sponsor	Part-time	Strategy, budgets, critical approvals
Transformation owner / Product owner	0.5–1 FTE	Process discovery, priorities, acceptance
AI / Agent engineer	1 FTE	Agent development and orchestration
Backend / Integration engineer	0.5–1 FTE	MCP, APIs, databases, security
Content operations lead	0.5 FTE	Content workflows, testing, QA
Healthcare content reviewer	Part-time	Clinical content validation
Security / architecture adviser	Periodic	Architecture and access review

FTE means full-time equivalent. Existing employees may cover several responsibilities. The objective is to transform their roles, not duplicate the current organisation.

14. Estimated pilot investment

These are preliminary India-based planning allowances, not vendor quotations or validated procurement prices.

Cost component	**90-day estimate**
Discovery and process architecture	₹1.0–2.0 L
Agent orchestration and core backend	₹2.5–5.0 L
Google Workspace / MCP integration	₹1.0–2.0 L
Evaluation and feedback infrastructure	₹1.0–2.0 L
Board dashboard and approval workflows	₹1.0–2.0 L

Security, QA and testing	₹0.75–1.5 L
Model APIs, cloud and software during pilot	₹0.75–1.5 L
Subtotal	₹8.0–16.0 L
Contingency (approximately 15%)	₹1.2–2.4 L
Total planning envelope	₹9.2–18.4 L

This assumes a lean implementation using existing or contracted talent. The model does not separately include full existing staff salaries, taxes or major custom design/video-generation licensing. If those are incremental, they must be added.

Suggested capital discipline

₹2–3 L

Discovery and proof of concept

₹4–7 L

Controlled pilot build

₹3–8 L

Validation and hardening

Indicative staged funding envelopes, subject to milestone approval and final scope.

I would release the investment in stages. If the first workflows do not meet quality and reliability standards, spending more on additional agents will not fix the underlying problem.

Part IX — Transformation roadmap and acceptance criteria

15. First 90 days

Period	Deliverables	Acceptance gate
Days 1–15	Process mapping, client selection, workflow baselines, data-access inventory	Approved pilot charter
Days 16–30	Agent registry, knowledge model, MCP tool design, evaluation rubrics	Architecture and security approval
Days 31–45	First content agents, orchestration, draft production, feedback ledger	Successful internal test suite

Days 46–60	Full content pipeline, approval workflow, dashboards	Shadow-mode quality and reliability gate
Days 61–75	Limited live client deployment	No critical incidents; SLA targets met
Days 76–90	Broader pilot, cost validation, agent scorecards, improvement cycle	Formal go / revise / stop decision

Mandatory go-live criteria

- Approved client data permissions and documented access controls.
- Tested workflow recovery, audit logs and approval gates.
- No critical unresolved security or privacy findings.
- Satisfactory performance on a representative healthcare-content evaluation dataset.
- Verified human approval before publication.
- Defined rollback and incident response procedures.
- Demonstrated cost and turnaround measurements against baseline.

16. The 12-month destination

Months 1–3

Prove

Content production, agent evaluation and controlled client delivery.

Months 4–6

Expand

Client management, social analytics, reporting, SEO and selected marketing workflows.

Months 7–9

Integrate

AI executive orchestration, finance intelligence, sales support and Board management cockpit.

Months 10–12

Institutionalise

Formal AgentOps, reusable agent templates, comprehensive performance intelligence and stable multi-client operations.

Part X — What makes Samrudhi's OS proprietary?

Simply connecting language models through MCP will not create a defensible technology asset. The long-term value should come from Samrudhi's accumulated, properly licensed and permission-controlled operational capabilities.

I would prioritise ownership of five components:

- Agent Registry & Competency Framework: Standardised digital roles, skills, performance benchmarks and certification requirements.
- Healthcare Marketing Workflow Library: Reusable process definitions, templates,

approvals, compliance controls and orchestration logic.

- Agent Performance Intelligence: Evaluation datasets, scoring methodology, feedback history, root-cause classification and controlled optimisation.
- Multi-client Operations Layer: Tenant isolation, service configurations, commercial rules, SLAs and profitability measurement.
- Enterprise Command Centre: A management interface connecting operational activity to financial and business outcomes.

Over time, the performance intelligence layer could become especially valuable because it answers not just what an agent did, but whether it performed better, at what cost, under which conditions, and why.

17. Proposed enterprise North Star

Samrudhi Agentic Enterprise Index

A proposed composite management index to be validated during implementation.

30%

Client Outcomes

25%

Quality & Compliance

25%

Delivery Economics

20%

Operational Reliability

Critical safety and compliance violations act as separate hard gates; they cannot be offset by a high composite score.

The ultimate measure of success should not be the number of agents or percentage of tasks automated.

It should be whether Samrudhi can serve more clients, achieve better outcomes, improve margins, maintain trust and operate reliably with a lean human governance team.

18. Next document: Detailed Enterprise Discovery & Process Engineering

Before finalising the technical build, I recommend preparing an implementation-ready discovery register covering all 70 proposed processes, with process IDs, existing owners, current software, task volumes, automation suitability, data requirements, KPIs, exception scenarios and agent assignments.

Alongside that, we should build a complete Agent Performance Management Framework, including evaluation rubrics for each agent category, feedback forms, weighted scorecards, continuous monitoring dashboards, escalation thresholds and improvement protocols.

These two assets will provide the operational specification from which the actual Samrudhi Agentic OS can be engineered.

My recommendation is to establish the feedback and evaluation infrastructure before deploying the first production agents. That way, Samrudhi starts collecting meaningful performance evidence from its very first autonomous workflow rather than trying to retrofit accountability after scaling.

SAMRUDHI AGENTIC OS

Document 02 | Enterprise Discovery, Agent Identity & Performance Management Framework

We should now introduce a foundational concept into Samrudhi's architecture:

Every AI agent is a registered digital resource with a unique identity, defined competencies, measurable capacity, delegated authority, and a continuously evaluated performance record.

This is more than an agent registry. We're designing a Digital Workforce Management System (DWMS) within Samrudhi Agentic OS.

The system should be capable of answering six questions about every agent at any moment:

- Who is this agent?
- What is it competent and authorised to do?
- What work is it currently responsible for?
- How much additional work can it reliably handle?
- How well is it performing compared with defined standards?
- What feedback, training, reassignment or improvement does it need?

We should also distinguish a digital resource from a human employee. Agents have operational identities and performance records, but human management remains responsible for their deployment, conduct, permissions and business consequences.

1. The agent identity architecture

I recommend that every agent have a permanent technical ID and a human-friendly name.

For example:

Aarya

AI Chief Creative Officer

SAM-EX-003 · Executive Superagent

Proposed · Pilot leadership

Identity

Aarya

Creative leadership and content orchestration

Reporting

AI CEO

Accountable human: Creative Operations Lead

Core competencies

Strategy, creative direction, QA

Competency certification required

Authority

Delegated, bounded

No independent external publication

Capacity

Not yet benchmarked

Established through load testing

Performance

Awaiting baseline

No production evidence yet

Names make the organisation understandable to humans. Technical IDs provide stable identity even when agents are renamed, upgraded or assigned new models.

An agent's identity must also remain separate from its model version. We may upgrade Aarya's underlying model or instructions without losing her historical performance record.

2. The Digital Workforce Registry

Each registered agent should have eight dimensions.

Dimension	Required information
Identity	ID, name, title, classification, department, version, status
Attributes	Operating style, risk tolerance, communication style, decision boundaries
Competencies	Skills, proficiency, tools, domain knowledge, certifications
Capacity	Throughput, concurrent tasks, time budget, token and financial limits
Responsibilities	KRAs, assigned workflows, deliverables, reporting relationships
Authority	Tool permissions, approval thresholds, client access, escalation rights
Performance	Quality, reliability, efficiency, output, business contribution
Development	Feedback, competency gaps, test results, improvements, release history

I would treat these as the agent's Digital Workforce Record.

Identity versus attributes versus competencies

These three should never be confused.

Identity describes who the agent is within the organisation.

Attributes describe how it is configured to behave. Examples include analytical, creative, cautious, concise, evidence-driven and collaborative. These are operating parameters, not claims of human personality.

Competencies describe what it has demonstrated it can do reliably. A competency should be earned through testing, not merely assigned in an agent's prompt.

For example, an agent can be configured to be medically cautious without having demonstrated competence in healthcare content verification.

Part I — Proposed named agent workforce

3. Executive leadership identities

These are proposed names, not deployed agents.

ID	Name	Role	Dominant attributes
SAM-EX-001	Arjun	AI CEO	Strategic, analytical, decisive within policy
SAM-EX-002	Daksh	AI COO	Structured, systematic, efficiency-oriented
SAM-EX-003	Aarya	AI CCO	Creative, brand-conscious, quality-focused
SAM-EX-004	Mitra	AI CXO	Empathetic communication, responsive, service-oriented
SAM-EX-005	Vikram	AI CGO	Commercial, opportunity-focused, experimental
SAM-EX-006	Niti	AI CFO	Precise, conservative,

			financially disciplined
SAM-EX-007	Sutra	AI CTO	Technical, reliable, security-oriented
SAM-EV-001	Satya	Chief Assurance Agent	Independent, evidence-driven, risk-sensitive

Satya should have a protected escalation path directly to the human Board. Arjun must not be able to suppress assurance findings or alter Satya's evaluations.

4. Specialist and execution identities

ID	Name	Function	Core competencies
SAM-AG-001	Smriti	Client Context	Knowledge retrieval, client requirements
SAM-AG-002	Anvesh	Research	Source discovery, evidence validation
SAM-AG-003	Disha	Content Strategy	Audience segmentation, campaign planning
SAM-AG-004	Kalpana	Editorial Planning	Calendars, content allocation, deadlines
SAM-AG-005	Lekha	Copywriting	Captions,

			scripts, messaging, CTAs
SAM-AG-006	Roop	Creative Briefs	Design direction, visual specifications
SAM-AG-007	Chitra	Creative Production	Template-driven visual asset generation
SAM-AG-008	Shuddhi	Content QA	Accuracy, brand checks, compliance screening
SAM-AG-009	Prakash	Publishing	Scheduling, platform operations
SAM-AG-010	Drishti	Social Analytics	Data analysis, engagement reporting
SAM-AG-011	Varta	Client Reporting	Reports, summaries, recommenda-tions
SAM-EV-002	Manak	Performance Evaluation	Rubric scoring, benchmark testing
SAM-EV-003	Kushal	Efficiency Intelligence	Cost, latency, capacity, bottlenecks

These names form a coherent digital organisation, but each identity must earn its place through

measurable performance.

For the initial pilot, we do not need all executive agents active. Aarya, the content specialists, Satya, Manak and Kushal are the priority.

Part II — Agent competency and capacity engineering

5. Competency framework

I propose a five-level competency system. Every agent should be assessed separately for each competency.

Level	Classification	Demonstrated ability
C0	Unverified	Capability claimed but not tested
C1	Foundation	Completes simple tasks under supervision
C2	Operational	Reliably completes standard tasks
C3	Advanced	Handles complex tasks and routine exceptions
C4	Expert	Handles advanced scenarios and optimises workflows
C5	Orchestrator	Coordinates multiple competencies and agents effectively

A C5 rating is not automatically superior to C4 in every situation. Orchestration and specialist expertise are different capabilities.

Competency matrix for the first pilot

The values below are required proficiency targets, not currently achieved ratings.

Agent	Health-care domain	Coordination			
Aarya	C3	C5	C4	C3	C5

Anvesh	C4	C3	C1	C4	C2
Disha	C3	C4	C3	C3	C3
Lekha	C3	C4	C4	C3	C2
Chitra	C2	C2	C4	C2	C2
Shuddhi	C4	C3	C3	C4	C3
Prakash	C2	C2	C2	C3	C3
Manak	C3	C3	C2	C4	C4

We should certify competencies through task-based tests using representative, appropriately permissioned healthcare marketing scenarios.

A competency record should store the test version, evaluation evidence, pass threshold, evaluator, certification date and expiry or reassessment condition.

6. Agent capacity management

This is a particularly important design decision.

Traditional organisations measure human capacity in hours, headcount and utilisation. AI agents require a different approach.

An agent's capacity is determined by:

- Sustainable completed tasks per hour or day.
- Concurrency permitted by the workflow and infrastructure.
- Average execution latency.
- Model token and tool consumption.
- Budget constraints.
- Quality deterioration under increased workload.
- API limits and external system availability.
- Human approval bottlenecks.

An agent should never be assigned capacity solely because a model can technically process more requests. Its sustainable capacity is the volume it can complete while maintaining required quality, cost and reliability.

Capacity calculation

\text{Capacity Utilisation} =
\frac{\text{Workload Assigned}}{\text{Validated Sustainable Capacity}}\times100

Capacity must be expressed in comparable work units. A research-intensive clinical carousel should carry a different workload weight from a routine appointment reminder graphic.

Interactive capacity model

Agent Capacity Simulator

Illustrative single-task-class capacity, not a measured agent benchmark.

Average task execution time

3 min

Concurrent executions

2

Available execution window
8 hours/day
Successful completion rate
90%
Permitted capacity utilisation
80%
Assigned daily workload
150 tasks
Modelled daily capacity
230
Successful tasks/day
Workload utilisation
65%
Within modelled capacity
Assumes parallel tasks of similar complexity and no additional queueing, human-review or external API constraints. Actual capacity must be established through load testing.

Capacity states

State	Trigger	Action
Available	Capacity and quality within limits	Accept new assignments
Busy	Approaching permitted workload limit	Queue lower-priority tasks
Saturated	Capacity exceeded	Route to another qualified agent
Degraded	Quality or reliability declines	Reduce workload, investigate
Quarantined	Critical safety or security failure	Stop relevant execution
Maintenance	Upgrade or validation in progress	Route work to approved alternative

Capacity should be recalculated after material model changes, prompt upgrades, tool changes and infrastructure modifications.

Part III — Agent Performance Management System

7. Digital workforce scorecard

Every agent should have a performance scorecard with three distinct layers.
Layer A — Universal Performance
Quality · Reliability · Efficiency · Capacity · Policy compliance
Layer B — Role-Specific Performance
Content acceptance · Research accuracy · Publishing reliability · Analytical validity
Layer C — Business Contribution
Client outcomes · Reduced rework · Delivery cost · SLA achievement
This separation is essential. A copywriting agent should not be penalised directly for poor lead conversion if the underlying problem is campaign targeting or a client's landing page.
We should measure what the agent controls, while also tracking downstream business outcomes.

8. Agent performance dashboard prototype

The following is an illustrative dashboard using simulated scores, designed to demonstrate the intended management experience.

Digital Workforce Monitor
Illustrative data only
Demo
7 days30 days90 days
Select agentLekha · Copywriting
Lekha
SAM-AG-005 · Copywriting
90.6/100
Exceeds target
Output quality
92/100
Efficiency
86/100
Reliability
97/100
Business contribution
87/100
Feedback & adaptability
91/100
Modelled capacity utilisation
68%
Suggested management action
Maintain controlled operations and continue scheduled quality sampling.
Changing the period demonstrates the intended filter control; scores remain the same simulated sample because historical observations have not been supplied.

9. Structured feedback and corrective actions

I recommend the following mandatory feedback categories:

Feedback category	Examples	Response

Accuracy	Unsupported claims, factual errors	Correct and retest
Quality	Weak copy, poor visual hierarchy	Revise and improve
Efficiency	High token cost, slow completion	Optimise workflow
Reliability	Timeouts, failed tool calls	Retry or escalate
Collaboration	Poor handoff, incomplete context	Improve task contract
Compliance	Privacy breach, unapproved claims	Block, investigate
Client experience	Rejections, complaints, missed preferences	Correct client context
Capacity	Backlogs, degraded performance	Rebalance assignments

Feedback severity

- S1 — Critical: Privacy, security, unauthorised publication or serious clinical-risk issue. Immediate containment and human escalation.
- S2 — Major: Significant factual error, repeated workflow failure or material client impact. Suspend affected workflow pending review.
- S3 — Moderate: Quality, efficiency or SLA issue. Correct within the defined improvement cycle.
- S4 — Minor: Stylistic preference or low-impact optimisation. Add to improvement backlog.

Every feedback record should be linked to an execution, an agent version, a root-cause category, an owner and a retest result.

10. Agent development and promotion

We can establish a digital workforce lifecycle:

- Registered: Identity and specifications created.
- In Training: Competency testing and workflow validation.
- Certified: Required tests passed for defined task classes.
- Probation: Limited production deployment with enhanced human review.
- Active: Approved autonomy within defined permissions.
- Advanced: Expanded task scope after sustained demonstrated performance.
- Restricted: Reduced authority following degraded performance.

- Retired: Replaced or discontinued, with historical records preserved.

Promotion must be based on evidence across enough representative tasks, not a single high score. Greater autonomy should require explicit approval and new risk testing.

Part IV — Enterprise Discovery & Process Engineering

11. Standard process register

Every business process should have a structured record linked to the agents responsible for its execution.

Field	Description
Process ID	Unique process identifier
Process name	Business activity
Department	Owning function
Trigger	Event initiating the process
Inputs	Required data and documents
Outputs	Expected deliverables
Human accountable owner	Person responsible for business outcome
Primary agent	Agent executing the workflow
Supporting agents	Specialists and subagents
Tools	MCP-accessible applications
Capacity requirement	Expected volume and workload units
SLA	Expected turnaround
Quality standard	Acceptance rubric
Autonomy level	Permitted actions
Evaluation mechanism	Performance measurement
Exception protocol	Failure and escalation response

12. First 15 processes to engineer

These are the proposed priority processes for the content and social media pilot.

Process ID	Process	Primary agent	Initial autonomy
CON-001	Client brief	Smriti	Autonomous

	retrieval		read
CON-002	Brand guideline extraction	Smriti	Draft + review
CON-003	Healthcare topic research	Anvesh	Draft + QA
CON-004	Competitor content analysis	Anvesh	Autonomous analysis
CON-005	Content pillar planning	Disha	Human-approved
CON-006	Monthly calendar creation	Kalpana	Human-approved
CON-007	Social media copywriting	Lekha	Draft + QA
CON-008	Creative brief generation	Roop	Draft + QA
CON-009	Template-based artwork production	Chitra	Draft + QA
CON-010	Clinical and brand content QA	Shuddhi	Screening only
CON-011	Client approval coordination	Mitra	Draft communications
CON-012	Social media scheduling	Prakash	Approved assets only
CON-013	Publication verification	Prakash	Autonomous read
CON-014	Social	Drishti	Autonomous

	performance analysis		analysis
CON-015	Monthly performance report	Varta	Draft + review

Each process must have its own acceptance test before being authorised for production.

The remaining enterprise processes can be mapped in subsequent workstreams covering sales, performance marketing, SEO, finance, account management and AgentOps.

13. Performance accountability RACI

For the Digital Workforce Management System, I propose the following accountability structure.

Activity	**Human Board / Owner**	**AI CEO**	**Functional Agent**	**Evaluator**
Agent role creation	A	R	C	C
Competency definition	A	C	R	R
Agent task assignment	A (delegated)	R	R	I
Capacity allocation	A (delegated)	R	R	C
Perfor-mance measure-ment	A (oversight)			
Feedback recording	A (oversight)	I	C	R
Improve-ment proposal	A (approval)			
Model/ prompt	A	C	R	C

prompt upgrade				
Autonomy expansion	A	R	C	C
Agent restriction or retirement	A	R	C	R

R = Responsible; A = Accountable; C = Consulted; I = Informed.

For safety-critical failures, the assurance system should be able to automatically block a defined tool or workflow while immediately escalating to the authorised human owner.

Part V — Digital Workforce Data Model

14. Core database structure

To support a genuinely proprietary operating system, I recommend separating identity, execution, performance and development data.

Core entity	Purpose
agents	Permanent identity, name, role, department
agent_versions	Model, prompts, configurations and release history
agent_attributes	Operating behaviours and decision policies
competencies	Standard competency catalogue
agent_competencies	Tested proficiency and certification evidence
agent_permissions	Tool, client and action-level authority
agent_capacity	Benchmarked throughput and limits
workflows	Standardised business processes
workflow_runs	Individual executions and status
agent_assignments	Workload ownership and

	delegation
evaluations	Scores, rubrics, evidence and evaluator versions
feedback	Human, system and independent QA feedback
improvement_actions	Corrective actions and improvement requests
release_tests	Benchmark and regression test outcomes
incidents	Failures, severity, containment and resolution
agent_performance_daily	Aggregated daily metrics
clients	Client-specific operational configuration
approvals	Human decisions and audit evidence

All client-related records must be tenant-scoped, with explicit access controls and retention policies.

The design should also support tracing a deliverable backward through the entire chain: client brief → agent assignments → model versions → source material → outputs → QA → human approval → publication → business result.

15. Board dashboard requirements

The Digital Workforce section of the Board Command Centre should include:

Agent Directory

Names, identities, departments, reporting

Competency Matrix

Certified skills, gaps and readiness

Capacity Monitor

Workload, queues, utilisation, saturation

Performance Scorecards

Quality, efficiency, reliability, trends

Feedback Centre

Reviews, corrections, complaints, observations

Improvement Pipeline

Proposals, tests, approvals, upgrades
Risk & Compliance
Policy violations, incidents, blocked actions
Agent Economics
Cost per task, cost per client, contribution
The dashboard should support drill-down from enterprise performance to department, agent, workflow, execution and feedback evidence.

Part VI — Implementation priorities

16. First 30-day build sequence

Week	Workstream	Deliverable
1	Enterprise discovery	Current process inventory, client segmentation, workload baselines
2	Agent identity engineering	Named registry, attributes, competencies, KRAs, authority definitions
3	Performance infrastructure	Feedback schema, evaluator rubrics, monitoring and capacity model
4	First workflow prototype	Client brief → research → content draft → QA → approval

Acceptance requirements for the first agent

Before Lekha, the Copywriting Agent, is considered production-ready, we should demonstrate:

- Stable identity and version history.
- Verified access only to authorised client information.
- Successful completion of a representative content test set.
- Measurable cost and execution latency.
- Structured feedback on every evaluated output.
- Traceable human review and correction.
- Defined sustainable workload capacity.
- Passing results on healthcare claim and brand-compliance tests.

- A documented rollback mechanism.

Once that works reliably, we can replicate the framework across other agents.

17. Strategic decisions to lock

I propose formally adopting the following as Samrudhi Agentic OS design standards.

Decision	Proposed standard
Identity	Every agent has a unique ID and human-friendly name
Attributes	Explicit operating configuration, not personality claims
Competencies	Evidence-based proficiency certification
Capacity	Benchmarked sustainable throughput
Performance	Universal + role-specific + business-outcome scorecards
Feedback	Structured, evidence-linked, continuously collected
Improvement	Controlled test-and-release lifecycle
Authority	Least privilege with human accountability
Monitoring	Execution-level telemetry and scheduled evaluations
Governance	Independent assurance with direct Board escalation

The larger opportunity

The Digital Workforce Management System could eventually become one of Samrudhi's most differentiated proprietary assets.

Most agent platforms focus on building and executing agents. Our proposed approach extends into managing an entire digital workforce as an accountable organisation, including competency certification, capacity planning, performance appraisals, structured feedback, improvement and governance.

That is the architecture I would build around.

This would give us an implementation-ready reference design that can be replicated across the entire Samrudhi agentic organisation.

We will first establish the complete organisation, then develop every agent's role clarity document, competency framework, capacity standards and performance management system — one agent at a time.

SAMRUDHI AGENTIC AI

Digital Workforce Organisation Development Programme | Document 01

1. Proposed organisation structure

I recommend a functional hierarchy with four operational levels and an independent assurance function.

Human Board

Founders · Governance · Strategy · Approvals

Arjun — AI CEO

Enterprise Management & Executive Orchestration

Daksh

AI COO

Vikram

AI CGO

Aarya

AI CCO

Mitra

AI CXO

Niti

AI CFO

Sutra

AI CTO

Departmental Managers & Specialist Agents

Functional ownership · Client workflows · Quality and delivery

Execution Subagents

Task-specific production, research, validation and automation

Satya — Independent AI Assurance

Direct escalation to the Human Board

2. Initial organisation — Proposed master headcount

We should identify the full target organisation before deciding which agents to deploy first.

Organisational level	Proposed digital positions
AI CEO	1
Executive functional agents	6
Independent assurance leadership	1
Department managers / leads	10

Specialist agents	28
Execution subagents	20
Independent evaluation agents	4
Total proposed agent roles	70

These are 70 proposed logical roles, not 70 simultaneously running models or an approved implementation headcount. The final number will be refined during organisational design.

3. Departmental structure

I recommend eight functional departments plus an independent assurance office.

Department	Executive owner	Scope
Office of AI CEO	Arjun	Strategy, planning, enterprise performance
Operations & Delivery	Daksh	Project management, capacity, workflows, SLAs
Growth & Business Development	Vikram	Lead generation, sales, proposals, expansion
Creative & Content	Aarya	Content strategy, creative production, brand
Client Experience	Mitra	Onboarding, account management, retention
Finance & Administration	Niti	Financial intelligence, invoicing, profitability
Technology & AgentOps	Sutra	MCP, infrastructure, agent management, security
Performance	Under COO initially	SEO, paid media,

Marketing & Intelligence		analytics, optimisation
Independent Assurance Office	Satya	Quality, compliance, agent evaluation, audit

I would consider introducing an AI Chief Marketing & Performance Officer later if the paid media, SEO and analytics divisions become large enough to justify a separate executive function.

4. The document development programme

For each agent, we will produce three linked documents and one registry record.

Document A — Agent Role Clarity & Accountability

Equivalent to the detailed ERC role clarity and job description framework, adapted for digital resources.

Includes identity, designation, reporting, mission, responsibilities, KRAs, decision rights, interfaces, escalation, expected deliverables and accountability.

Document B — Competency & Capacity Framework

Required domain knowledge, functional skills, technical capabilities, tool permissions, proficiency levels, certification tests, workload capacity and resource limits.

Document C — Performance Management & Evaluation

KPIs, definitions, targets, measurement sources, scorecards, feedback frequency, evaluation rubrics, failure thresholds, corrective actions and improvement lifecycle.

Document D — Digital Workforce Registry Record

Structured machine-readable identity, agent version, competencies, permissions, status, capacity, performance history and reporting hierarchy.

5. Standard format for every agent

We should lock one consistent format before beginning individual role development.

Section	Contents
01. Document control	Agent ID, version, effective date, owner
02. Identity	Name, designation, department, level
03. Role purpose	Why this agent exists
04. Reporting relationships	Reports to, supervises, collaborates with
05. Attributes	Behavioural and operating characteristics

06. Key result areas	Outcomes for which the agent is responsible
07. Responsibilities	Specific recurring duties
08. Workflows	Assigned processes and task triggers
09. Deliverables	Required outputs and quality standards
10. Decision authority	Autonomous, restricted and approval-required actions
11. Competencies	Required skills and proficiency
12. Capacity	Task throughput, concurrency, resource budgets
13. KPIs	Metrics, targets, calculation and data source
14. Feedback	Evaluation sources and frequency
15. Exceptions	Failure handling and escalation
16. Improvement	Retraining, testing, upgrades and reassessment
17. Interfaces	Upstream/downstream agents and systems
18. Acceptance criteria	Certification and production-readiness requirements

Each agent should also have a one-page operational role card for quick reference, while retaining the detailed master specification for engineering and governance.

6. Recommended sequence

I suggest developing the programme in five stages.

- Organisation Master List
  Finalise every executive, manager, specialist, subagent and evaluator position. Assign names, unique IDs, departments, reporting relationships and initial deployment priority.

- Agent Role Clarity Documents
  Start with Arjun (AI CEO), then executive leadership, departmental managers, specialists and subagents.

- Competency and Capacity Architecture
  Establish role-specific competency requirements, certification standards, sustainable capacity and resource budgets.

- Performance Management Framework
  Define KRAs, KPIs, scorecards, structured feedback, appraisal cycles and continuous improvement rules for every role.

- Operating SOPs and Inter-Agent Protocols
  Document workflows, handoffs, delegation, approvals, escalation and monitoring so the entire organisation operates consistently.

7. One structural recommendation before we lock the organisation

I would keep the full 70-role structure as a design hypothesis, not immediately establish all 70 agents.

Some execution subagents may be better implemented as deterministic software functions, reusable skills or workflow steps. Creating a separate AI identity for every minor task can increase cost, coordination failures and management complexity.

We should distinguish three types of digital resources:

Resource type	Identity requirement	Example
Autonomous agent	Full identity, role clarity, competencies, KPIs	Lekha — Copywriting Agent
Reusable specialist subagent	Registered identity and bounded performance standards	Medical Source Verification Agent
Deterministic tool / workflow	Service ID, ownership, reliability metrics	Resize an image, update a spreadsheet cell

This will help us build an efficient organisation rather than an unnecessarily complicated one.

The guiding principle throughout will be:

Every agent must have an identity. Every identity must have a purpose. Every purpose must have measurable outcomes. Every outcome must have accountability, and every performance gap must trigger structured improvement.

1. Proposed organisation — Department master

Code	Department	Executive ownership
CEO	CEO Office & Enterprise Strategy	Arjun — AI CEO
SAL	Sales & Business Development	Vikram — AI CGO
MKT	Samrudhi Brand & Marketing	Vikram — AI CGO
CEX	Client Experience & Account Management	Mitra — AI CXO
OPS	Operations & Delivery Management	Daksh — AI COO
CRT	Creative, Content & Social Media	Aarya — AI CCO
PMG	Paid Media, SEO & Growth Marketing	Proposed AI Performance Marketing Lead
DAT	Analytics, Intelligence & Reporting	Daksh / designated Intelligence Lead
FIN	Finance & Administration	Niti — AI CFO
TEC	Technology, MCP & AgentOps	Sutra — AI CTO
GOV	Assurance, Compliance & Agent Performance	Satya — Chief Assurance Agent

11 functional departments form the proposed initial target organisation. The final agent count

should be established from actual workflows and delivery requirements, rather than fixing the previously discussed 70 roles in advance.

2. Development order

I suggest proceeding in the following sequence:

- CEO Office & Enterprise Strategy
- Sales & Business Development
- Samrudhi Brand & Marketing
- Client Experience & Account Management
- Operations & Delivery Management
- Creative, Content & Social Media
- Paid Media, SEO & Growth Marketing
- Analytics, Intelligence & Reporting
- Finance & Administration
- Technology, MCP & AgentOps
- Independent Assurance & Performance Management

Department 01 — CEO Office & Enterprise Strategy

Master Agent Register · CEO-001 to CEO-006

3. Department mandate

The CEO Office will operate as Samrudhi's central intelligence and orchestration function.

It will translate human Board objectives into operating plans, coordinate executive agents, monitor enterprise performance, identify risks, recommend corrective measures and ensure that every department remains aligned with business objectives.

It should not directly execute routine content production, sales outreach or finance transactions. Those responsibilities belong to specialist departments.

4. Initial agent hierarchy

Human Board

Arjun

AI Chief Executive Officer

CEO-001

Sankalp

Strategic Planning

CEO-002

Lakshya

Enterprise KPI Intelligence

CEO-003

Samanvay

Executive Coordination

CEO-004

Nirnay

Decision Intelligence

CEO-005

Pragati

Initiative & Milestone Tracking
CEO-006

5. CEO Office Agent Master Register

ID / Name	Designation	Primary responsibility	Deployment priority
CEO-001 Arjun	AI CEO	Enterprise orchestration, executive alignment and Board reporting	P1
CEO-002 Sankalp	Strategic Planning Agent	Annual, quarterly and monthly operating plans	P2
CEO-003 Lakshya	Enterprise KPI Intelligence Agent	Enterprise scorecards, targets, variances and trends	P1
CEO-004 Samanvay	Executive Coordination Agent	Cross-department task assignment, handoffs and follow-ups	P1
CEO-005 Nirnay	Decision Intelligence Agent	Scenario analysis, decision briefs and recommenda-tions	P2
CEO-006	Initiative	Strategic	P2

Pragati	Tracking Agent	milestones, ownership, delays and dependencies	

P1 indicates foundational deployment; P2 indicates deployment after the initial operating infrastructure is stable.

These are proposed logical agent identities. Some may initially share the same runtime and orchestration infrastructure.

6. Initial identity, attributes and competency requirements

Agent	Core attributes	Priority competencies
Arjun	Strategic, disciplined, evidence-driven, accountable	Enterprise orchestration, business management, prioritisation
Sankalp	Analytical, forward-looking, structured	Strategic planning, scenario modelling, resource planning
Lakshya	Precise, objective, detail-oriented	KPI architecture, variance analysis, dashboard intelligence
Samanvay	Coordinated, systematic, responsive	Task delegation, workflow dependencies, SLA monitoring
Nirnay	Critical, balanced, risk-sensitive	Decision analysis, evidence synthesis, risk evaluation
Pragati	Persistent, organised,	Milestone tracking,

	deadline-focused	project controls, exception reporting

These are intended operating characteristics, not verified competencies. Each agent will require task-based certification before production deployment.

7. Key result areas and performance metrics

Agent	Key result area	Proposed primary KPIs
Arjun	Enterprise execution	Operating-plan adherence, executive reporting accuracy, unresolved escalations
Sankalp	Planning effectiveness	Plan completeness, forecast accuracy, approved-plan delivery
Lakshya	Performance intelligence	Data accuracy, reporting timeliness, variance detection
Samanvay	Executive coordination	Assignment accuracy, handoff completion, overdue task escalation
Nirnay	Decision support	Evidence completeness, recommendation usefulness, decision turnaround
Pragati	Initiative execution	Milestone visibility, status accuracy, delay detection

Proposed departmental targets

Metric	Initial target
Daily enterprise brief delivered on schedule	≥99%
KPI reporting accuracy	≥99%
Critical escalation routing	100%
Cross-functional task traceability	100%
Material decisions with documented evidence	100%
Strategic milestone status updates within SLA	≥95%

These are design targets, not observed performance.

8. Capacity management

For the CEO Office, capacity should be measured through the number and complexity of business units, workflows, decisions and escalations handled—not by the number of messages generated.

Agent	Primary capacity unit
Arjun	Executive coordination cycles and active department portfolios
Sankalp	Planning scenarios and operating plans
Lakshya	KPI datasets, dashboards and monitoring jobs
Samanvay	Active workflow dependencies and task handoffs
Nirnay	Decision briefs and scenario analyses
Pragati	Active initiatives and milestones

Actual throughput, concurrency, latency and operating costs will be established through benchmarking.

9. Governance boundaries

Arjun and the CEO Office may autonomously coordinate approved work, generate analysis,

monitor KPIs, issue internal reminders and propose corrective actions.
They must not independently approve budgets outside delegated limits, sign agreements, alter strategic objectives, expand agent permissions, suppress assurance findings or make legally binding commitments.
The independent Assurance Office, led by Satya, retains direct escalation access to the human Board.

Department 01 summary

6
Proposed agents

3
P1 priorities

3
P2 priorities

Status: Proposed for organisation design approval. Detailed role clarity documents, competency certification standards and KPI scorecards will follow once the master organisation is finalised.

Department 02 — Sales & Business Development

Department code: SAL Executive Head: Vikram — AI Chief Growth Officer Reports to: Arjun — AI CEO Human accountability: Founder / Designated Sales & Commercial Owner Status: Proposed organisation structure, pending approval

1. Department mandate

Build a predominantly AI-operated revenue acquisition engine that systematically identifies healthcare businesses, creates qualified sales opportunities, manages outreach and follow-ups, supports consultations and proposals, and converts opportunities into profitable, long-term Samrudhi clients.
The department will own the entire sales funnel, from market identification to signed commercial agreements and handover to Client Experience.
It will work closely with Samrudhi's own Marketing Department, but the two functions will have distinct accountability:

- Marketing: Demand generation, positioning, brand visibility and inbound lead creation.
- Sales: Prospect qualification, outreach, meetings, solution development, proposals, negotiation support and conversion.

Important operating principle: AI agents can independently research, score, prepare, analyse and coordinate within approved boundaries. External prospect communications, pricing commitments and contract decisions require defined human authority. We can progressively automate low-risk communications after consent, deliverability and compliance controls are validated.

2. Proposed sales organisation

Arjun — AI CEO
Vikram

AI Chief Growth Officer
SAL-001 · Executive Growth Leadership
Aarav
Sales Operations Lead
SAL-002
Tara
Revenue Intelligence Lead
SAL-003
Sales Execution Specialists
Khoj
Prospect Intelligence
Lakshit
Lead Qualification
Sampark
Outbound Outreach
Amantran
Meeting Scheduling
Samvaad
Discovery Preparation
Prastav
Proposals & Solutions
Anubandh
Commercial Coordination
Anugrah
Sales Follow-up
Vistaar
Account Expansion
Setu
Sales-to-Delivery Handover

3. Sales Agent Master Register

I propose 13 named agent roles for the Sales & Business Development Department.

ID	Agent identity	Designation	Priority
SAL-001	Vikram	AI Chief Growth Officer	P1
SAL-002	Aarav	Sales Operations & Pipeline Lead	P1
SAL-003	Tara	Revenue Intelligence &	P2

		Intelligence & Forecasting Lead	
SAL-004	Khoj	Prospect Research & Market Intelligence Agent	P1
SAL-005	Lakshit	Lead Qualification & Scoring Agent	P1
SAL-006	Sampark	Outbound Prospecting & Outreach Agent	P1
SAL-007	Amantran	Meeting & Appointment Coordination Agent	P1
SAL-008	Samvaad	Sales Discovery & Needs Assessment Agent	P2
SAL-009	Prastav	Solution Design & Proposal Agent	P1
SAL-010	Anubandh	Commercial & Contract Coordination Agent	P2
SAL-011	Anugrah	Sales Follow-up & Nurturing	P1

		Agent	
SAL-012	Vistaar	Upselling & Cross-selling Intelligence Agent	P2
SAL-013	Setu	Sales-to-Client Onboarding Handover Agent	P1

P1 = foundational implementation priority; P2 = subsequent implementation. These are logical positions, not necessarily separate model instances.

4. Initial role clarity and competencies

Agent	Core responsibility	Essential competencies
Vikram	Revenue strategy, sales targets, executive coordination	Growth strategy, pipeline management, commercial judgement
Aarav	CRM hygiene, task assignment, sales process compliance	CRM operations, workflow management, SLA tracking
Tara	Revenue forecasts, conversion intelligence, sales analytics	Funnel analytics, forecasting, attribution
Khoj	Identify healthcare organisations and decision-makers	Market research, healthcare segmentation, data verification
Lakshit	Evaluate lead fit, intent, urgency and	ICP scoring, qualification

	buying readiness	frameworks, data interpretation
Sampark	Prepare personalised outbound campaigns	B2B outreach, messaging, personalisation, deliverability
Amantran	Coordinate meetings and calendar availability	Scheduling, calendar integration, communication
Samvaad	Prepare discovery questions and summarise client needs	Consultative selling, needs analysis, structured documentation
Prastav	Build service recommendations and commercial proposals	Solution architecture, proposal writing, pricing logic
Anubandh	Coordinate quotations, agreements and commercial approvals	Contract workflow, commercial documentation, risk detection
Anugrah	Track prospect follow-ups and nurturing sequences	CRM sequencing, lead nurturing, response analysis
Vistaar	Identify opportunities to grow existing accounts	Account intelligence, service mapping, opportunity analysis
Setu	Transfer signed-client information into onboarding	Data completeness, handoff management, workflow validation

The individual role documents will specify required proficiency levels, assessment methods,

tools, task contracts and decision authority.

5. Sales process architecture

The department should own 18 standard operating processes.

Process ID	Sales process	Primary agent
SAL-P01	Ideal Customer Profile development	Vikram
SAL-P02	Healthcare market segmentation	Khoj
SAL-P03	Target account identification	Khoj
SAL-P04	Prospect and decision-maker research	Khoj
SAL-P05	Lead enrichment and validation	Lakshit
SAL-P06	Lead scoring and prioritisation	Lakshit
SAL-P07	Outbound campaign preparation	Sampark
SAL-P08	Prospect outreach and response tracking	Sampark
SAL-P09	Inbound lead qualification	Lakshit
SAL-P10	Appointment booking and reminders	Amantran
SAL-P11	Discovery preparation and needs assessment	Samvaad
SAL-P12	Solution and service package design	Prastav

SAL-P13	Proposal and quotation preparation	Prastav
SAL-P14	Follow-up and opportunity nurturing	Anugrah
SAL-P15	Commercial review and negotiation support	Anubandh
SAL-P16	Contract execution coordination	Anubandh
SAL-P17	Sales-to-delivery handover	Setu
SAL-P18	Revenue forecasting and expansion review	Tara / Vistaar

Every process will later receive an SOP, defined triggers, SLAs, exception handling and performance evaluation rules.

6. Sales funnel architecture

Target Market

Khoj · Prospect intelligence

Qualified Leads

Lakshit · ICP and intent scoring

Engaged Prospects

Sampark · Outreach and response

Discovery Meetings

Amantran + Samvaad

Proposals

Prastav · Solution design

Commercial Closure

Anubandh · Human-authorised

Client Onboarding

Setu · Handover to CX

The funnel widths illustrate stage progression, not forecast conversion rates.

7. Sales KRAs and KPIs

Each sales agent needs role-specific accountability, alongside universal metrics such as reliability, cost, accuracy and policy compliance.

Agent	Key result area	Proposed

		performance metrics
Vikram	Revenue acquisition	New MRR, pipeline coverage, acquisition contribution margin
Aarav	Pipeline discipline	CRM completeness, overdue opportunities, task SLA compliance
Tara	Revenue predictability	Forecast error, data freshness, funnel reporting accuracy
Khoj	Prospect quality	Verified accounts, ICP fit rate, research cost per accepted account
Lakshit	Qualification accuracy	Human agreement rate, lead-to-meeting conversion, false-positive rate
Sampark	Outreach effectiveness	Positive response rate, qualified meeting rate, complaint rate
Amantran	Meeting coordination	Booking accuracy, meeting attendance, scheduling turnaround
Samvaad	Discovery effectiveness	Brief completeness, qualification gaps, human acceptance
Prastav	Proposal effectiveness	Proposal acceptance, turnaround, scope accuracy
Anubandh	Commercial	Documentation

	compliance	accuracy, approval adherence, contract cycle time
Anugrah	Opportunity progression	Follow-up SLA, reactivation rate, qualified pipeline progression
Vistaar	Account expansion	Qualified expansion opportunities, accepted expansion proposals
Setu	Onboarding readiness	Handoff completeness, missing-information incidents, turnaround

Important: Revenue conversion is a shared business outcome. An individual research or outreach agent should primarily be evaluated on what it controls, rather than receiving full credit or blame for eventual sales closure.

8. Initial capacity framework

We should measure capacity in sustainable, quality-adjusted output units.

Agent	**Capacity measurement unit**
Khoj	Verified target accounts per day
Lakshit	Leads assessed per hour
Sampark	Approved personalised outreach packages per day
Amantran	Scheduling requests handled per day
Samvaad	Discovery briefs per day
Prastav	Approved proposals per week
Anugrah	Active opportunities managed
Anubandh	Commercial documents

	processed per week
Setu	Complete client handovers per week
Tara	Active pipeline records and forecasting cycles

For each agent, capacity must include concurrency, execution cost, latency, failure rate, human review burden and performance deterioration under load.

9. Sales agent autonomy and governance

Activity	AI autonomy	Human control
Public business research	Autonomous within policy	Periodic audit
Lead qualification	Autonomous scoring	Review low-confidence or high-value cases
Prospect segmentation	Autonomous	Approve ICP and targeting rules
Outbound message drafting	Autonomous	Approve campaigns and templates
External outreach sending	Controlled only	Authorise channels, recipients, limits and compliance
Appointment scheduling	Bounded	Approved calendar rules
Discovery call support	Assistive	Human sales owner leads material negotiations
Proposal generation	Autonomous drafting	Human validates scope and pricing
Pricing and discounts	Recommendations only	Human approval

Contract execution	No autonomous signature	Human authority
Client onboarding handover	Autonomous after verified closure	Human account owner accountable

Samrudhi should implement suppression lists, opt-out handling, outreach frequency limits, sender authentication and privacy safeguards before activating outbound communication agents.

10. Sales performance intelligence

Every sales agent should produce structured execution data that feeds the Digital Workforce Management System.

Sales Agent Monitoring Framework

Productivity

Qualified outputs per period

Quality

Acceptance and accuracy

Efficiency

Cost and time per accepted output

Reliability

SLA and successful execution

Commercial Impact

Pipeline and revenue contribution

Compliance

Permission, outreach and privacy controls

Each agent will receive execution-level feedback, daily monitoring, weekly performance review and monthly competency reassessment where appropriate. High-severity incidents trigger immediate containment rather than waiting for scheduled review.

11. Proposed implementation priorities

For the first sales deployment, I recommend activating the following as a coordinated pod:

Sales Pod — Release 1

Vikram

Growth orchestration

Aarav

CRM & pipeline

Khoj

Prospect research

Lakshit

Lead qualification

Sampark

Outreach preparation

Amantran

Meeting coordination
Prastav
Proposal generation
Anugrah
Follow-up management
Setu
Client handover
Nine logical roles, implemented progressively. The existing Content & Social Media pilot remains the first live transformation priority; the sales pod is a subsequent rollout.

Priority P1 roles
Department 02 is now proposed for inclusion in Samrudhi's Master Organisation Register. Names, reporting relationships, role boundaries and priorities can be refined before final approval.

SAMRUDHI AGENTIC AI
Document 01A.03 | Digital Workforce Master Organisation Register
Department 03 — Samrudhi Brand, Marketing & Demand Generation
Department code: MKT Executive head: Vikram — AI Chief Growth Officer (SAL-001) Reports to: Arjun — AI CEO Human accountability: Founder / Designated Marketing & Growth Owner Status: Proposed organisation structure
1. Department mandate
Establish Samrudhi as a recognised, trusted and differentiated healthcare marketing brand, with an AI-operated demand-generation engine that consistently creates qualified inbound opportunities for the Sales & Business Development Department.
This department is responsible for marketing Samrudhi itself, rather than delivering marketing services to Samrudhi's clients.
Its core objectives are to:

- Build Samrudhi's brand positioning and authority in healthcare marketing.
- Generate predictable, measurable demand from healthcare organisations.
- Manage Samrudhi's website, content, social channels, campaigns and digital presence.
- Develop partnerships, events, webinars and other market-development initiatives.
- Convert anonymous interest into identified, qualified leads for Sales.
- Continuously optimise marketing effectiveness, acquisition costs and return on investment.

The department should own marketing-generated pipeline, while Sales owns opportunity progression and commercial closure. Both share accountability for revenue growth.
2. Proposed departmental hierarchy
Arjun — AI CEO
Enterprise strategy and Board reporting
Vikram — AI Chief Growth Officer
Shared executive owner: Sales + Samrudhi Marketing

Prerna
AI Head of Brand & Marketing
MKT-001 · Department leader
Aditi
Brand & Communications
Uday
Demand Generation
Vaani
Content & Thought Leadership
Nayan
Digital Channels & Website
Specialist Marketing Agents
Research · SEO · Social · Campaigns · Partnerships · Automation · Analytics

3. Departmental agent master register

I propose 16 named agent roles for the Marketing Department, including its department head and four functional leads.

Agent ID	Identity	Designation	Priority
MKT-001	Prerna	AI Head of Brand & Marketing	P1
MKT-002	Aditi	Brand Strategy & Communica-tions Lead	P1
MKT-003	Uday	Demand Generation Lead	P1
MKT-004	Vaani	Content & Thought Leadership Lead	P1
MKT-005	Nayan	Digital Channels & Website Lead	P2
MKT-006	Spandan	Healthcare Market Intelligence Agent	P1

		Agent	
MKT-007	Akriti	Brand Identity & Creative Direction Agent	P2
MKT-008	Katha	Content Marketing & Editorial Agent	P1
MKT-009	Tarang	Social Media & Community Agent	P1
MKT-010	Drishya	Marketing Creative Production Agent	P2
MKT-011	Shikhar	SEO & Organic Growth Agent	P2
MKT-012	Abhiyan	Campaign Planning & Paid Acquisition Agent	P2
MKT-013	Sahyog	Partnerships, Events & Webinar Agent	P2
MKT-014	Pravah	Marketing Automation & Lead Nurturing Agent	P1
MKT-015	Maanak	Marketing Analytics & Attribution Agent	P1

MKT-016	Pratidhwani	PR, Reputation & Social Listening Agent	P2

Vikram is already registered as SAL-001 and is not counted again. Names and priorities are proposed, not deployed.

16

Proposed agent roles

9

P1 priority roles

7

P2 expansion roles

4. Functional groups and reporting relationships

A. Marketing Leadership

Prerna — AI Head of Brand & Marketing

Owns the marketing strategy, annual and monthly marketing plans, budget recommendations, department coordination and marketing-generated pipeline.

Reports to Vikram. Directly supervises the four functional leads.

B. Brand & Communications

Lead: Aditi (MKT-002)

Agent	Responsibilities
Aditi	Brand positioning, messaging architecture, brand guidelines
Akriti	Brand identity, creative standards and visual direction
Pratidhwani	Reputation monitoring, PR intelligence and social listening

This function ensures that Samrudhi communicates a consistent value proposition and builds credibility among healthcare founders, doctors, hospitals, clinics and healthcare enterprises.

C. Demand Generation

Lead: Uday (MKT-003)

Agent	Responsibilities
Uday	Demand-generation strategy, campaigns, lead targets
Spandan	Healthcare market segmentation,

	competitor intelligence
Abhiyan	Paid acquisition planning and campaign optimisation
Pravah	Lead nurturing, marketing automation and CRM integration
Maanak	Marketing performance, attribution and acquisition economics

This function generates and measures market demand, then transfers qualified leads to Sales.

D. Content & Thought Leadership

Lead: Vaani (MKT-004)

Agent	Responsibilities
Vaani	Thought-leadership strategy, editorial priorities
Katha	Articles, case studies, newsletters and educational content
Tarang	Social content distribution and community engagement
Drishya	Marketing creative assets and visual production

This function should establish Samrudhi's expertise in healthcare growth, patient acquisition, branding and digital transformation.

E. Digital Channels & Website

Lead: Nayan (MKT-005)

Agent	Responsibilities
Nayan	Website experience, landing pages, conversion pathways
Shikhar	Organic search visibility and technical SEO
Sahyog	Partnerships, webinars, conferences and collaborative

campaigns

Nayan also coordinates with Uday and Vaani on landing pages, lead capture and content distribution.

These are primary reporting assignments. Individual agents can support multiple workflows through controlled cross-functional task contracts.

5. Marketing process architecture

I recommend a master inventory of 24 marketing processes.

Process ID	Process	Primary agent
MKT-P01	Annual marketing strategy	Prerna
MKT-P02	Quarterly marketing planning	Prerna
MKT-P03	Healthcare market segmentation	Spandan
MKT-P04	Competitor and category intelligence	Spandan
MKT-P05	Brand positioning and messaging	Aditi
MKT-P06	Brand identity governance	Akriti
MKT-P07	Monthly editorial calendar	Vaani
MKT-P08	Thought-leadership content development	Katha
MKT-P09	Case studies and success stories	Katha
MKT-P10	Social media planning and publishing	Tarang
MKT-P11	Social engagement and community monitoring	Tarang

MKT-P12	Marketing creative production	Drishya
MKT-P13	Website content management	Nayan
MKT-P14	Landing-page development and optimisation	Nayan
MKT-P15	SEO research and optimisation	Shikhar
MKT-P16	Demand-generation campaign planning	Uday
MKT-P17	Paid acquisition management	Abhiyan
MKT-P18	Lead capture and marketing qualification	Pravah
MKT-P19	Lead nurturing and automation	Pravah
MKT-P20	Marketing-to-sales lead handover	Pravah
MKT-P21	Partnerships and event marketing	Sahyog
MKT-P22	PR and reputation monitoring	Pratidhwani
MKT-P23	Marketing analytics and attribution	Maanak
MKT-P24	Marketing performance review and optimisation	Prerna

6. Marketing-to-sales operating workflow

Market Intelligence
Spandan · Identify audiences, needs and opportunities
Brand & Demand Strategy
Prerna + Aditi + Uday
Content
Vaani
Campaigns
Abhiyan
Organic
Shikhar
Lead Capture & Nurturing
Pravah · Record consent, source, engagement and lead status
Sales Handover
Lakshit (SAL-005) · Qualification and opportunity creation
Revenue Feedback Loop
Maanak + Tara · Attribution, conversion and acquisition economics

Interdepartmental handoff

Marketing should not simply forward every captured contact to Sales.

A lead should enter the sales pipeline only after meeting agreed qualification criteria. Marketing must retain responsibility for nurturing leads that are not yet sales-ready.

The handoff record should contain lead identity, organisation, segment, source, consent or lawful contact basis, engagement history, fit score, stated interest and the reason for transfer.

7. Marketing competencies and role-specific KRAs

Agent	Essential competencies	Primary KRAs
Prerna	Marketing strategy, budget planning, orchestration	Marketing plan, qualified pipeline contribution
Aditi	Positioning, brand architecture, communications	Brand consistency, messaging effectiveness
Uday	Demand generation, funnel strategy, campaign economics	Qualified leads, acquisition efficiency
Vaani	Editorial strategy, healthcare thought leadership	Content relevance, editorial quality

	leadership	
Nayan	Website management, UX, conversion optimisation	Website performance, lead conversion
Spandan	Research, market segmentation, competitive intelligence	Research accuracy, actionable insights
Akriti	Visual identity, brand standards, design review	Brand-compliant creative quality
Katha	Long-form writing, case studies, storytelling	Content acceptance, factual accuracy
Tarang	Social media, community management, analytics	Qualified engagement, audience growth
Drishya	Visual production, templates, creative optimisation	Accepted assets, production efficiency
Shikhar	SEO, keyword strategy, technical audits	Qualified organic traffic, SEO health
Abhiyan	Paid media, targeting, experimentation	Cost per qualified lead, campaign quality
Sahyog	Partnerships, events, webinar operations	Qualified partner leads, event outcomes
Pravah	Marketing automation, CRM, nurturing	Nurture progression, lead-data

		completeness
Maanak	Analytics, attribution, measurement	Reporting accuracy, funnel visibility
Pratidhwani	Reputation analysis, media intelligence	Issue detection, monitoring coverage

Each role's competency levels, assessment tests and KPI targets will be developed in its individual role clarity and performance documents.

8. Departmental KPIs and scorecard

I propose six outcome areas.

Performance area	Primary metrics	Owner
Brand development	Branded search, qualified mentions, target audience engagement	Aditi
Demand creation	Marketing-qualified leads, accepted leads, qualified pipeline	Uday
Content effectiveness	Content acceptance, qualified engagement, content-assisted leads	Vaani
Digital conversion	Website conversion, qualified organic traffic, landing-page results	Nayan
Marketing efficiency	Cost per accepted lead, acquisition spend, campaign contribution	Maanak
Marketing reliability	Delivery SLAs, data accuracy, policy	Prerna

adherence	

Proposed operating targets

KPI	Initial design target
Approved marketing calendar adherence	≥95%
Content first-pass acceptance	≥90%
Marketing-to-sales data completeness	≥98%
Qualified lead handoff within agreed SLA	≥95%
Critical marketing data or privacy incidents	0
Unauthorised external publishing	0
Traceable campaign expenditure	100%

We should set lead-volume, conversion, CAC and pipeline targets only after confirming Samrudhi's revenue objective, current marketing spend, acquisition history and sales cycle.

9. Capacity measurement

Agent group	Primary capacity unit
Marketing leadership	Active campaigns, plans and initiatives
Brand and creative	Accepted brand assets and review cycles
Content	Accepted articles, posts, newsletters and case studies
Social	Managed channels, approved posts, engagement cases
SEO and website	Audits, optimisations and published changes
Demand generation	Active campaigns and qualified lead volume

Automation	Active nurturing workflows and processed lead events
Analytics	Data pipelines, reports and monitoring jobs
Partnerships	Active partners, events and qualified opportunities

As established in our Digital Workforce framework, capacity will be benchmarked against quality, latency, concurrency, operating cost and system limits.

10. Governance and agent authority

Activity	**Autonomous agent execution**	**Human approval**
Market and competitor research	Yes	Periodic validation
Brand positioning proposals	Drafting and analysis	Final positioning
Editorial planning	Yes	Calendar approval
Content creation	Yes	External publication
Website changes	Drafts and tested staging changes	Production changes initially
Paid campaign planning	Yes	Budgets, launch and material changes
Lead scoring	Yes	Review exceptions
Marketing automation	Within approved sequences	New external campaigns
Partnerships and sponsorships	Research and recommendations	Commercial commitments
Public statements and reputation response	Monitoring and drafting	Sensitive responses
Analytics and reporting	Yes	External reports initially

For Samrudhi's own healthcare marketing content, factual accuracy and advertising compliance remain essential. Agents must not invent client outcomes, fabricate case studies or publish unverified performance claims.

11. Initial implementation priorities

The department should be engineered in two releases.

Release 1 — Marketing Foundation

P1

Priority roles

Prerna

Aditi

Uday

Vaani

Spandan

Katha

Tarang

Pravah

Maanak

Focus: positioning, market research, content, social presence, lead capture, nurturing and reporting.

Release 2 — Growth Expansion

P2

Nayan

Akriti

Drishya

Shikhar

Abhiyan

Sahyog

Pratidhwani

Focus: website conversion, SEO, paid campaigns, partnerships, visual production and reputation intelligence.

The existing client content-production pilot remains the first technical deployment. Samrudhi's own marketing workflows can subsequently reuse its tested content, QA and publishing infrastructure rather than duplicating agents unnecessarily.

SAMRUDHI AGENTIC AI

Document 01A.04 | Digital Workforce Master Organisation Register

Department 04 — Client Experience & Account Management

Department Code: CEX Executive Head: Mitra — AI Chief Experience Officer Reports To: Arjun — AI CEO Human Accountability: Founder / Designated Client Success & Account Management Lead Status: Proposed organisational structure

1. Department mandate

Build an AI-operated, human-governed client experience and account management function that ensures every Samrudhi client receives consistent communication, proactive service, timely delivery coordination, transparent reporting and measurable business value.
The department should function as the single point of accountability for each client relationship, coordinating internally with Creative, Performance Marketing, Operations, Analytics, Sales and Finance.
Its responsibility begins when Sales closes an opportunity and continues through onboarding, ongoing account management, renewals, retention and relationship expansion.

Core objectives

- Ensure every client is onboarded with complete documentation, expectations and service commitments.
- Maintain an accurate, continuously updated understanding of each client's business.
- Coordinate client requirements and translate them into actionable internal work.
- Deliver proactive, structured communication instead of reactive follow-ups.
- Monitor client satisfaction, service quality, account health and potential churn.
- Facilitate client approvals, review meetings, feedback and escalations.
- Improve retention, renewals and lifetime client value.
- Ensure all client interactions, commitments and outcomes are traceable.

2. Proposed departmental hierarchy

Arjun — AI CEO

Mitra

AI Chief Experience Officer

CEX-001 · Executive Client Experience Leadership

Sneha

Client Success & Relationships

Saarthi

Client Operations & Coordination

Sparsh

Client Experience & Quality

Samriddhi

Retention & Account Growth

Specialist Client Experience Agents

Onboarding · Client Intelligence · Briefs · Communications · Approvals · Reviews · Escalations · Retention

3. Departmental agent master register

I propose 16 named agent roles, including the executive head and four functional leads.

Agent ID	Identity	Designation	Priority
CEX-001	Mitra	AI Chief Experience Officer	P1

CEX-002	Sneha	Client Success & Relationship Lead	P1
CEX-003	Saarthi	Client Operations & Coordination Lead	P1
CEX-004	Sparsh	Client Experience & Service Quality Lead	P2
CEX-005	Samriddhi	Retention & Account Growth Lead	P2
CEX-006	Swagat	Client Onboarding Agent	P1
CEX-007	Smriti	Client Knowledge & Context Agent	P1
CEX-008	Shruti	Client Brief & Requirements Agent	P1
CEX-009	Sandesh	Client Communication Agent	P1
CEX-010	Sweekriti	Client Approval & Sign-off Agent	P1
CEX-011	Samiksha	Client Review &	P1

		Meeting Intelligence Agent	
CEX-012	Sahay	Client Support & Query Resolution Agent	P2
CEX-013	Samadhan	Client Escalation & Complaint Resolution Agent	P1
CEX-014	Nabz	Client Health & Satisfaction Intelligence Agent	P2
CEX-015	Navikaran	Contract Renewal & Retention Agent	P2
CEX-016	Vardhan	Account Expansion & Opportunity Intelligence Agent	P2

P1 = foundational role; P2 = subsequent expansion. These are proposed logical agent identities, not separately deployed models.

Registry note: Smriti was previously introduced as the Client Context Agent in the content pilot. We will retain that identity and assign it permanently to CEX-007, avoiding a duplicate digital workforce record. Vardhan identifies expansion opportunities for existing clients; Vistaar in Sales owns their commercial progression.

16

Proposed agent roles

10

P1 priority roles

6

P2 expansion roles

4. Functional groups and reporting relationships

A. Client Experience Leadership

Mitra — CEX-001

Owns the overall client experience strategy, account health, relationship governance, retention performance and coordination with other executive agents.

Mitra will supervise four functional leads and report client experience performance to Arjun.

B. Client Success & Relationships

Lead: Sneha — CEX-002

Agent	Primary responsibility
Sneha	Client relationship ownership, account plans, stakeholder coordination
Swagat	New-client onboarding, document collection, kickoff readiness
Smriti	Client business knowledge, brand guidelines, historical context
Samiksha	Review meetings, minutes, action items, follow-up intelligence

This group is responsible for knowing the client, maintaining continuity and ensuring the relationship progresses according to agreed objectives.

C. Client Operations & Coordination

Lead: Saarthi — CEX-003

Agent	Primary responsibility
Saarthi	Client requests, delivery coordination, SLA monitoring
Shruti	Requirement gathering, briefs, scope clarification
Sandesh	Client updates, approved messages, reminders
Sweekriti	Approval workflows, version tracking, sign-off evidence

This group translates client expectations into actionable internal assignments.

D. Client Experience & Service Quality

Lead: Sparsh — CEX-004

Agent	Primary responsibility
Sparsh	Service standards, experience monitoring, corrective actions
Sahay	Client queries, support tickets, resolution coordination
Samadhan	Complaints, escalations, root-cause coordination
Nabz	Client satisfaction, sentiment, relationship-risk intelligence

This group ensures that unresolved service issues do not remain invisible until a client decides to leave.

E. Retention & Account Growth

Lead: Samriddhi — CEX-005

Agent	Primary responsibility
Samriddhi	Retention strategy, account value, renewal readiness
Navikaran	Renewal tracking, contract timelines, renewal preparation
Vardhan	Identification of new client needs and service opportunities

Commercial proposals, pricing and contract closure remain with the Sales Department and authorised human commercial owners.

5. Client lifecycle architecture

01 · Sales Handover

Setu → Swagat

Signed scope, commitments and client information

02 · Client Onboarding

Swagat + Smriti

Client profile, brand assets, access, kickoff

03 · Requirements & Planning

Shruti + Saarthi

Briefs, deliverables, SLAs and priorities
04 · Delivery Coordination
Saarthi + Sandesh
Progress, communication and exceptions
05 · Approval & Publication
Sweekriti
Client sign-offs and approved releases
06 · Performance Reviews
Samiksha + Sneha
Reports, meetings, actions and feedback
07 · Client Health & Retention
Nabz + Samriddhi
Satisfaction, risks, renewals and expansion
Feedback and exception management operate continuously across every stage.

6. Client Experience Process Master

I recommend 26 standard operating processes.

Process ID	Process	Primary agent
CEX-P01	Sales-to-client handover validation	Swagat
CEX-P02	Client onboarding checklist	Swagat
CEX-P03	Client master profile creation	Smriti
CEX-P04	Brand and business knowledge collection	Smriti
CEX-P05	Access and asset collection coordination	Swagat
CEX-P06	Client kickoff meeting preparation	Sneha
CEX-P07	Monthly requirement and brief collection	Shruti
CEX-P08	Scope validation and change request	Saarthi

	routing	
CEX-P09	Client request registration	Saarthi
CEX-P10	Client request prioritisation	Saarthi
CEX-P11	Internal delivery assignment coordination	Saarthi
CEX-P12	Delivery progress communication	Sandesh
CEX-P13	Client approval and sign-off tracking	Sweekriti
CEX-P14	Content revision and feedback routing	Sweekriti
CEX-P15	Client query and support management	Sahay
CEX-P16	Complaint registration and escalation	Samadhan
CEX-P17	Service recovery and corrective action tracking	Samadhan
CEX-P18	Weekly client status reporting	Sandesh
CEX-P19	Monthly business review preparation	Samiksha
CEX-P20	Meeting minutes and action tracking	Samiksha
CEX-P21	Client satisfaction feedback collection	Nabz

CEX-P22	Account health and churn-risk monitoring	Nabz
CEX-P23	Contract renewal readiness	Navikaran
CEX-P24	Client retention planning	Samriddhi
CEX-P25	Upselling and cross-selling opportunity identification	Vardhan
CEX-P26	Client account closure and knowledge handover	Sneha

Each process will receive a standard SOP and workflow contract during the subsequent operating-process development stage.

7. Initial role clarity and competencies

Agent	**Essential competencies**	**Key result areas**
Mitra	Client strategy, orchestration, service governance	Client experience, retention, escalations
Sneha	Account management, stakeholder communication	Relationship continuity, account planning
Saarthi	Workflow coordination, SLA management	Request resolution, delivery coordination
Sparsh	Service quality, customer experience analysis	Experience standards, corrective measures
Samriddhi	Retention strategy,	Renewals, retained

	account economics	revenue
Swagat	Onboarding, document validation	Onboarding completeness, time to readiness
Smriti	Knowledge management, retrieval accuracy	Client context accuracy, freshness
Shruti	Requirements analysis, brief structuring	Brief completeness, rework prevention
Sandesh	Business communication, status reporting	Timeliness, communication accuracy
Sweekriti	Approval workflow, version control	Approval traceability, turnaround
Samiksha	Meeting intelligence, action extraction	Review quality, action follow-through
Sahay	Support classification, knowledge retrieval	Query resolution, support SLA
Samadhan	Escalation management, root-cause analysis	Incident resolution, recurrence prevention
Nabz	Sentiment analysis, churn-risk detection	Account health accuracy, early warnings
Navikaran	Renewal tracking, contract intelligence	Renewal readiness, deadline adherence
Vardhan	Account intelligence, opportunity identification	Qualified expansion opportunities

Required proficiency levels and formal competency certification tests will be defined in the individual role documents.

8. KRAs and performance metrics

Every agent will have its own scorecard. The following are the initial measurement definitions.

Agent	Primary KPIs
Mitra	Gross revenue retention, client satisfaction, critical escalations
Sneha	Account-plan completion, review adherence, stakeholder responsiveness
Saarthi	Client request SLA, handoff accuracy, unresolved coordination issues
Sparsh	Service quality score, recurring complaints, corrective-action closure
Samriddhi	Renewal rate, retained MRR, preventable churn
Swagat	Onboarding turnaround, checklist completeness, onboarding rework
Smriti	Retrieval accuracy, context freshness, unsupported-information rate
Shruti	Brief first-pass acceptance, requirement completeness, rework rate
Sandesh	Communication SLA, message accuracy, unapproved-send incidents
Sweekriti	Approval turnaround, version

	accuracy, unauthorised-release incidents
Samiksha	Meeting-summary accuracy, action capture, follow-up closure
Sahay	First-response time, resolution time, reopened tickets
Samadhan	Escalation response, resolution SLA, repeat-incident rate
Nabz	Health-score calibration, at-risk account detection, alert usefulness
Navikaran	Renewal notice timeliness, renewal readiness, missed deadlines
Vardhan	Qualified opportunities identified, Sales acceptance, opportunity relevance

Revenue retention and satisfaction are shared departmental outcomes. They should not be used as the sole basis for judging individual specialist agents.

9. Departmental performance dashboard

Client Experience Command Centre

Proposed KPI architecture — no live client data connected

Account Health

Healthy · Watchlist · At Risk

Client Satisfaction

CSAT and structured feedback

Request SLA

On-time completion and backlog

Approval Pipeline

Pending, overdue, approved

Retention & Renewals

Renewal dates and retained MRR

Escalations

Open, critical, ageing and resolved

Proposed initial service standards

KPI	Proposed target
Onboarding checklist completeness	100%
Client request registration	100%
Client communication within agreed SLA	≥95%
Approval and sign-off traceability	100%
Monthly review completion for eligible accounts	≥95%
Critical complaint escalation within defined SLA	100%
Unauthorised client communications	0
Unauthorised content publication	0

These are proposed standards, not current performance results. Actual response times and account health thresholds will be set after examining client contracts and historical service patterns.

10. Agent capacity management

The capacity of Client Experience agents should be measured using account complexity, activity volume and quality-adjusted workloads.

Agent	Capacity unit
Mitra	Active account portfolios and critical escalations
Sneha	Weighted active client accounts
Saarthi	Open client requests and delivery dependencies
Swagat	Concurrent onboarding projects
Smriti	Active client knowledge bases and retrieval volume
Shruti	Client briefs processed per period

Sandesh	Approved communications and status updates
Sweekriti	Active approval requests and revisions
Samiksha	Client reviews and action items
Sahay	Active support tickets
Samadhan	Escalation cases and investigations
Nabz	Monitored accounts and health signals
Navikaran	Active renewal cycles
Vardhan	Accounts analysed and accepted opportunities

Account complexity weighting

Not all Samrudhi clients require the same level of management.

I recommend introducing a weighted account model:

Account classification	Illustrative workload weight
Standard	1.0
Growth	1.5
Enterprise / high complexity	2.5

For example, an agent coordinating four standard accounts, two growth accounts and one enterprise account would carry 9.5 weighted account units.

These weights are initial modelling assumptions. We should calibrate them against actual requests, meetings, deliverables, revision cycles and escalation volumes.

11. Interdepartmental accountability

Client Experience should own client communication and relationship coordination, but should not become a bottleneck or take over technical delivery responsibilities.

Interface	Client Experience responsibility	Partner department responsibility
Sales	Validate handover, initiate onboarding	Provide signed scope and commitments
Creative & Content	Collect briefs,	Produce and quality-

	coordinate approvals	check content
Operations	Communicate priorities and client constraints	Assign resources, manage delivery
Paid Media & SEO	Communicate objectives, review outcomes	Manage technical execution
Analytics	Validate client reporting requirements	Produce accurate performance data
Finance	Coordinate client billing queries	Issue invoices, reconcile payments
Technology	Report access issues and system failures	Resolve technical incidents
Assurance	Escalate quality and compliance risks	Independently investigate and evaluate

One critical rule: No delivery agent should independently promise additional scope, altered timelines, discounts or performance guarantees to clients.

All such commitments must pass through defined commercial and operational approval rules.

12. Client communication and privacy controls

Because Samrudhi works with healthcare organisations, Client Experience may encounter sensitive information, including patient-related material.

The initial operating policy should include:

- Separate client knowledge and access boundaries.
- No patient-identifiable information in general marketing workflows without a specifically approved lawful process.
- Restricted use of clinical records, patient testimonials and medical imagery.
- Human approval for sensitive external communications and material commitments.
- Approved communication channels and contact preferences.
- Audit trails for messages, approvals, revisions and escalations.
- Retention and deletion policies for client documents and communications.

An agent should not be allowed to retrieve information from another client's account simply because it has technical access to the same Google Workspace environment.

13. Structured performance feedback

Each client-facing agent must receive feedback from four sources.
Human Account Owner Feedback
Accuracy, responsiveness, judgement, communication quality and escalation appropriateness.
Independent Agent Evaluation
Brief quality, completeness, policy compliance, factual consistency and handoff correctness.
System Performance Evidence
SLA adherence, latency, retries, workflow completion, cost and capacity utilisation.
Client Outcome Feedback
Client satisfaction, accepted deliverables, complaints, renewal outcomes and relationship health.
Negative feedback should trigger an evidence-based corrective action, not an uncontrolled change to the agent's instructions.

14. Deployment plan

Release 1 — Client Experience Foundation
P1
Mitra
Sneha
Saarthi
Swagat
Smriti
Shruti
Sandesh
Sweekriti
Samiksha
Samadhan
Focus on onboarding, client context, requirement collection, delivery coordination, communication, approvals and escalation handling.
Release 2 — Experience Intelligence & Retention
P2
Sparsh
Samriddhi
Sahay
Nabz
Navikaran
Vardhan
Focus on proactive account health, service quality, support automation, renewals, retention and account expansion.
For Samrudhi's existing client base, we should pilot the CEX workflows with a small number of consenting accounts and validate knowledge isolation, communication quality and approval reliability before extending them to every client.

15. Consolidated organisation register — Progress

Department	Proposed agent roles	Status

01. CEO Office & Enterprise Strategy	6	Drafted
02. Sales & Business Development	13	Drafted
03. Samrudhi Brand & Marketing	16	Drafted
04. Client Experience & Account Management	16	Drafted
Total proposed logical roles	51	4 departments mapped

The count includes named roles once within these four departmental registers. Cross-department executive responsibilities and pre-existing pilot identities will be reconciled in the final enterprise registry.

SAMRUDHI AGENTIC AI

Document 01A.05 | Digital Workforce Master Organisation Register

Department 05 — Operations & Delivery Management

Department Code: OPS Executive Head: Daksh — AI Chief Operating Officer Reports To: Arjun — AI CEO Human Accountability: Founder / Designated Head of Operations Status: Proposed organisational structure

1. Department mandate

Build a centralised, AI-operated delivery management function responsible for ensuring that every commitment made to a Samrudhi client is translated into a structured workflow, assigned to the right resource, completed within agreed timelines, quality-checked, approved and delivered efficiently.

The Operations Department will serve as the execution control centre of Samrudhi Agentic OS. Its primary responsibility is not to create content, run advertising campaigns or communicate independently with clients. Its responsibility is to orchestrate the resources and workflows that make these services happen.

Core objectives

- Convert approved client scopes into operational delivery plans.
- Allocate work across AI agents and human specialists based on competency, capacity and priority.
- Manage daily, weekly and monthly production schedules.
- Track task status, dependencies, deadlines and service-level agreements.
- Detect delivery bottlenecks, agent overload and workflow failures early.
- Coordinate quality checks, approvals, rework and release readiness.

- Monitor delivery productivity, resource utilisation and cost per accepted deliverable.
- Continuously improve operational efficiency without compromising quality.
- Maintain complete execution traceability across clients, departments and agents.
- Provide reliable operational intelligence to the AI CEO and human management.

2. Proposed departmental hierarchy

P1 roles
5
P2 roles
4. Functional groups and reporting relationships
A. Executive Operations Leadership
Daksh — OPS-001
Owns enterprise delivery performance, cross-department coordination, resource planning, SLA achievement, operational efficiency and escalation management.
Daksh reports to Arjun and coordinates closely with Aarya (Creative), Mitra (Client Experience), Sutra (Technology), Niti (Finance) and the Performance Marketing function.
B. Delivery Planning & Project Management
Lead: Yojana — OPS-002

Agent	Primary responsibility
Yojana	Project planning, delivery governance, workstream coordination
Sankalan	Convert signed scope and client briefs into delivery requirements
Samay	Build production calendars, timelines and deadline schedules

This group translates commercial commitments into measurable work packages.
C. Resource & Capacity Management
Lead: Niyojan — OPS-003

Agent	Primary responsibility
Niyojan	Capacity strategy, allocation policies and utilisation governance
Vitaran	Assign work to qualified, authorised and available agents
Kshamata	Monitor sustainable throughput, concurrency and overload

This group is central to the Digital Workforce Management System.
It must distinguish between an agent's theoretical processing capability and its validated

sustainable capacity at the required quality standard.

D. Workflow Execution & Automation

Lead: Pravartan — OPS-004

Agent	Primary responsibility
Pravartan	Coordinate multi-agent workflows and execution contracts
Kram	Monitor workflow dependencies and prerequisite completion
Gati	Track progress, execution status and SLA adherence

The actual execution engine should use durable software orchestration. AI agents make bounded planning and exception decisions; deterministic infrastructure maintains task state, retries, timeouts and audit logs.

E. Delivery Control & Quality Coordination

Lead: Nirikshan — OPS-005

Agent	Primary responsibility
Nirikshan	Coordinate delivery readiness and required quality gates
Suchak	Detect delivery exceptions, missed milestones and risks
Punargathan	Coordinate revisions, rework and corrective assignments
Pramaan	Verify that required approvals and acceptance conditions are complete

Nirikshan coordinates quality processes but does not replace the independent Assurance Department or specialist healthcare content reviewers.

F. Operational Excellence

Lead: Unnati — OPS-006

Agent	Primary responsibility
Unnati	Continuous operational improvement and process

	governance
Dakshata	Productivity, throughput and efficiency intelligence
Vyaya	Delivery cost, agent expenditure and contribution analysis
Sudhaar	Root-cause analysis and corrective-action coordination

This group identifies opportunities to reduce rework, shorten turnaround and improve delivery economics.

5. Operations workflow architecture

01 · Approved Client Scope
Client Experience + Sales
Contract, deliverables, deadlines, requirements
02 · Delivery Planning
Sankalan + Yojana
Work packages, milestones, dependencies
03 · Resource Allocation
Niyojan + Vitaran + Kshamata
Competency, availability, cost and priority
04 · Workflow Execution
Pravartan + Functional Delivery Agents
Production, progress tracking, exception handling
05 · Quality & Acceptance
Nirikshan + Pramaan
Quality gates, clinical review, required approvals
06 · Client Delivery
Saarthi + Sweekriti (CEX)
Approved deliverables and sign-off evidence
07 · Operational Intelligence
Dakshata + Vyaya + Sudhaar
Efficiency, rework, cost and improvement feedback

Exception monitoring, capacity control and audit logging operate throughout the workflow, not only at the final stage.

6. Operations Process Master

I recommend 30 standard operating processes.

Process ID	Process	Primary agent
OPS-P01	Approved scope intake and validation	Sankalan

	intake and validation	
OPS-P02	Scope-to-deliverable mapping	Sankalan
OPS-P03	Project and campaign work breakdown	Yojana
OPS-P04	Monthly production planning	Yojana
OPS-P05	Weekly delivery scheduling	Samay
OPS-P06	Daily task scheduling	Samay
OPS-P07	Agent competency matching	Vitaran
OPS-P08	Agent capacity verification	Kshamata
OPS-P09	Work allocation and assignment	Vitaran
OPS-P10	Task priority and queue management	Niyojan
OPS-P11	Workflow initiation and orchestration	Pravartan
OPS-P12	Workflow dependency validation	Kram
OPS-P13	Workflow progress tracking	Gati
OPS-P14	SLA monitoring and early warning	Gati
OPS-P15	Delayed task escalation	Suchak
OPS-P16	Agent overload and saturation response	Kshamata

OPS-P17	Failed execution and retry coordination	Pravartan
OPS-P18	Cross-department dependency coordination	Kram
OPS-P19	Quality gate coordination	Nirikshan
OPS-P20	Revision and rework assignment	Punargathan
OPS-P21	Deliverable acceptance verification	Pramaan
OPS-P22	Release readiness confirmation	Pramaan
OPS-P23	Daily operational reporting	Daksh
OPS-P24	Weekly delivery performance review	Yojana
OPS-P25	Monthly capacity and utilisation review	Niyojan
OPS-P26	Cost per accepted deliverable analysis	Vyaya
OPS-P27	Agent productivity benchmarking	Dakshata
OPS-P28	Bottleneck and process waste analysis	Unnati
OPS-P29	Root-cause analysis and CAPA tracking	Sudhaar

OPS-P30	Operational improvement validation	Unnati

Each process will later be developed into a standard workflow/SOP with triggers, inputs, outputs, SLAs, controls, KPIs, exceptions and feedback requirements.

7. Initial role clarity and competencies

Agent	Essential competencies	Key result areas
Daksh	Operations strategy, orchestration, resource economics	Delivery performance, efficiency, governance
Yojana	Project planning, work breakdown, milestone management	Plan accuracy, schedule adherence
Niyojan	Capacity planning, workload balancing	Sustainable utilisation, resource availability
Pravartan	Workflow orchestration, task contracts, exception handling	Execution reliability, workflow completion
Nirikshan	Quality gate design, acceptance coordination	Delivery readiness, defect prevention
Unnati	Lean process improvement, root-cause analysis	Process efficiency, improvement outcomes
Sankalan	Scope analysis, requirement decomposition	Work-package completeness
Samay	Scheduling, deadline	Scheduling accuracy,

	management	on-time planning
Vitaran	Competency matching, allocation optimisation	Assignment accuracy, workload balance
Kshamata	Capacity modelling, telemetry analysis	Capacity accuracy, overload prevention
Gati	SLA monitoring, progress intelligence	Early warning, timely escalation
Kram	Dependency analysis, workflow sequencing	Dependency accuracy, blocked-work reduction
Suchak	Anomaly detection, risk classification	Exception detection, escalation quality
Punargathan	Rework management, version coordination	Revision turnaround, rework traceability
Pramaan	Acceptance criteria, approval validation	Release readiness, unauthorised-release prevention
Dakshata	Productivity analytics, benchmarking	Throughput and efficiency intelligence
Vyaya	Unit economics, cost allocation	Cost visibility, delivery margin intelligence
Sudhaar	Root-cause analysis, CAPA management	Corrective-action effectiveness

All competencies require evidence-based validation rather than relying on prompt instructions alone.

8. Operations KRAs and KPIs

A. Department-level KPIs

KRA	**Primary KPI**	**Proposed target**
Delivery reliability	Deliverables completed within	≥95%

	agreed SLA	
Workflow reliability	Eligible workflows completed successfully	≥95%
Quality	First-pass accepted deliverables	≥90%
Capacity	Workload within validated capacity limits	100% of assignments
Traceability	Deliverables with complete execution history	100%
Efficiency	Cost per accepted deliverable	Baseline, then improve
Responsiveness	Critical delivery exceptions escalated within policy SLA	100%
Governance	Unauthorised releases	0
Improvement	Corrective actions validated before closure	100%

These are initial design targets, not validated operational benchmarks.

B. Agent-specific performance metrics

Agent	**Primary KPIs**
Daksh	Enterprise delivery SLA, operating cost variance, critical escalation ageing
Yojana	Plan completeness, schedule accuracy, milestone adherence
Niyojan	Capacity forecast accuracy,

	allocation efficiency, overload incidents
Pravartan	Workflow success rate, retry rate, orchestration latency
Nirikshan	Quality-gate completion, escaped defects, acceptance compliance
Unnati	Verified cycle-time reduction, improvement success rate
Sankalan	Scope mapping accuracy, missing requirements, downstream rework
Samay	Scheduling accuracy, deadline conflicts, planning turnaround
Vitaran	Competency-match accuracy, reassignment rate, assignment latency
Kshamata	Capacity prediction error, saturation detection, overload prevention
Gati	SLA breach detection, alert timeliness, false-alert rate
Kram	Dependency completeness, blocked-work detection, sequencing errors
Suchak	Critical exception recall, false-positive rate, escalation latency
Punargathan	Rework turnaround, revision traceability, repeat revisions
Pramaan	Acceptance verification accuracy, missing approval detection

Dakshata	Productivity reporting accuracy, accepted output per resource unit
Vyaya	Cost attribution accuracy, cost per accepted deliverable, variance detection
Sudhaar	Root-cause quality, CAPA completion, recurrence rate

Measurement rule: Agents should be evaluated on the quality and reliability of their own decisions and outputs. Departmental business outcomes should supplement, not replace, individual performance assessment.

9. Digital Workforce Capacity Management

This is one of the most important functions in the proposed operating model.

Every agent across Samrudhi will have a capacity record maintained by the Digital Workforce Management System.

Capacity record structure

Field	Definition
Agent ID	Permanent digital identity
Competency	Certified task capability
Workload unit	Standardised task-complexity measure
Sustainable throughput	Accepted tasks per period at required quality
Maximum concurrency	Validated parallel execution limit
Execution latency	Median and high-percentile task duration
Cost per accepted output	Model, tool and execution expenditure
Current assignments	Active work in progress
Queue backlog	Waiting tasks
Utilisation	Assigned workload relative to validated capacity

Error rate	Failed or rejected executions
Quality trend	Performance change under workload
Availability state	Available, busy, saturated, degraded or restricted

Example allocation policy

Work Allocation Decision Logic

New task received

Requirements · Priority · SLA · Client

Find authorised, certified agents

Competency · Client access · Tool permissions

Evaluate capacity and economics

Queue · Latency · Quality · Cost

Assign optimal eligible agent

Record decision, constraints and ownership

Monitor execution and outcome

Quality · SLA · Cost · Feedback

If no agent satisfies the required competency, permissions and capacity criteria, the workflow should queue or escalate rather than assign work to an unsuitable agent.

10. Operations Command Centre

The COO should have a live operational dashboard providing visibility across all active clients, workflows and agents.

Daksh — Operations Command Centre

Proposed dashboard architecture; live operational data not yet connected

Active Workflows

Running · Queued · Blocked · Completed

Delivery SLA

On-time · At risk · Breached

Agent Capacity

Available · Busy · Saturated

Quality Gates

Pending QA · Rework · Accepted

Exceptions

Critical · Major · Routine

Delivery Economics

Cost · Efficiency · Contribution

Rework & CAPA

Revision causes · Repeat defects

Productivity

Accepted output · Cycle time · Trends

11. Operational management cadence

Frequency	Review	Primary agent
Continuous	Workflow state, SLA and exception monitoring	Gati / Suchak
Daily	Production readiness, workload and priority review	Daksh / Yojana
Weekly	Delivery performance, capacity and rework	Niyojan / Nirikshan
Monthly	Productivity, cost and process improvement	Daksh / Unnati
Quarterly	Operating model, scalability and competency requirements	Daksh / Arjun

The monitoring cadence is continuous where technically supported, but executive agents need not run as permanently active model instances. Event triggers, scheduled jobs and deterministic monitoring services should handle routine observation efficiently.

12. Interdepartmental accountability

Department	Operations responsibility	Partner department responsibility
Sales	Validate delivery feasibility and capacity	Provide approved scope and commitments
Client Experience	Coordinate execution and delivery status	Own client communication and approvals
Creative & Content	Assign and monitor production	Own creative quality and content output

Paid Media & SEO	Coordinate campaigns and deadlines	Own campaign performance and technical execution
Analytics	Ensure reporting delivery timelines	Own data accuracy and analysis
Finance	Supply delivery cost and resource data	Own financial controls and invoicing
Technology	Report workflow failures and requirements	Own infrastructure and platform reliability
Assurance	Provide execution evidence and incidents	Independently evaluate compliance and performance

Authority boundaries

Operations may automatically allocate approved work, reprioritise tasks within agreed limits, trigger permitted retries and escalate workflow exceptions.

Operations may not independently expand client scope, change commercial terms, bypass quality gates, authorise restricted data access or publish unapproved client material.

13. Structured feedback and improvement

Each operations agent should receive feedback from:

- Execution telemetry: Workflow completion, errors, retries, latency, cost and SLA performance.
- Downstream agents: Assignment clarity, input completeness, dependency accuracy and handoff quality.
- Human management: Operational judgement, prioritisation, escalation quality and practical usefulness.
- Independent evaluation: Policy compliance, competency adherence, task correctness and performance regression.

Every material failure should be classified by root cause: missing context, incorrect decision, tool failure, inadequate competency, insufficient capacity, workflow design, external dependency or human approval delay.

Improvement proposals must be tested before deployment. Agent prompt or model changes must not be used to conceal an underlying infrastructure or process problem.

14. Implementation priorities

Release 1 — Delivery Control Foundation

P1

Daksh

Yojana
Niyojan
Pravartan
Nirikshan
Sankalan
Samay
Vitaran
Kshamata
Gati
Suchak
Punargathan
Pramaan
Focus on scope mapping, scheduling, allocation, workflow orchestration, capacity, SLA monitoring, quality gates and exception handling.
Release 2 — Operational Intelligence
P2
Unnati
Kram
Dakshata
Vyaya
Sudhaar
Focus on advanced dependency management, productivity benchmarking, delivery economics and continuous process improvement.
Implementation note: The 13 P1 roles represent responsibilities to be covered, not 13 separate systems to build immediately. The first content-production pilot should use a smaller orchestration pod, then split responsibilities as throughput and complexity justify it.

SAMRUDHI AGENTIC AI
Document 01A.06 | Digital Workforce Master Organisation Register
Department 06 — Creative, Content & Social Media
Department Code: CRT Executive Head: Aarya — AI Chief Creative Officer Reports To: Arjun — AI CEO Human Accountability: Creative Director / Designated Content & Creative Lead Deployment Priority: P1 — First Agentic Transformation Pilot Status: Proposed organisation structure
1. Department mandate
Build a scalable, AI-operated, human-governed creative production engine capable of delivering high-quality, medically responsible and brand-consistent marketing content for Samrudhi's healthcare clients.
This department will manage the complete content lifecycle:
Client brief → Research → Strategy → Editorial planning → Copywriting → Creative production → Quality review → Client approval → Publishing → Performance feedback → Optimisation.
The department must be capable of supporting hospitals, specialty clinics, individual

practitioners, diagnostics providers, preventive healthcare brands and other healthcare enterprises, while maintaining distinct client identities and appropriate medical-review controls.

Strategic objectives

- Standardise creative and content delivery across clients without making every brand look or sound the same.
- Reduce repetitive production work through reusable AI agents, templates and approved workflows.
- Improve first-pass content acceptance and reduce revisions.
- Maintain clinical accuracy, responsible health communication and brand consistency.
- Support static, carousel, video, short-form, long-form and campaign content.
- Coordinate publishing, community management and content performance reviews.
- Measure every agent's quality, capacity, efficiency, reliability and contribution.
- Build proprietary healthcare marketing content knowledge, workflows and evaluation datasets.

2. Proposed departmental hierarchy

Arjun — AI CEO

Aarya

AI Chief Creative Officer

CRT-001 · Creative & Content Leadership

Disha

Content Strategy & Research

Kalpana

Editorial & Content Planning

Roop

Creative Direction & Production

Tarangini

Social Media & Distribution

Shuddhi

Content Quality & Clinical Screening

Creative & Content Specialist Agents

Research · Copywriting · Design · Video · Publishing · Community · Optimisation

3. Departmental Agent Master Register

I recommend 22 named agent roles in the target Creative, Content & Social Media organisation.

Agent ID	Identity	Designation	Priority
CRT-001	Aarya	AI Chief Creative Officer	P1
CRT-002	Disha	Content Strategy & Research Lead	P1

CRT-003	Kalpana	Editorial Planning & Content Calendar Lead	P1
CRT-004	Roop	Creative Direction & Production Lead	P1
CRT-005	Tarangini	Social Media & Distribution Lead	P1
CRT-006	Shuddhi	Content Quality & Clinical Screening Lead	P1
CRT-007	Anvesh	Healthcare Content Research Agent	P1
CRT-008	Lekha	Healthcare Copywriting Agent	P1
CRT-009	Chitra	Visual Creative Production Agent	P1
CRT-010	Prakash	Content Publishing & Scheduling Agent	P1
CRT-011	Drishti	Social Media Performance Intelligence Agent	P1

CRT-012	Kathan	Long-form Content & Article Writing Agent	P2
CRT-013	Sutradhar	Video Scriptwriting & Storyboarding Agent	P2
CRT-014	Chalchitra	Video Editing & Motion Creative Agent	P2
CRT-015	Aakar	Brand Design Adaptation Agent	P2
CRT-016	Rachna	Carousel & Infographic Production Agent	P2
CRT-017	Sambhasha	Social Community Engagement Agent	P2
CRT-018	Pratibimb	Content Repurposing Agent	P2
CRT-019	Bhasha	Multilingual Content Localisation Agent	P2
CRT-020	Pariksha	Platform & Technical	P1

		Technical Content QA Agent	
CRT-021	Prayog	Content Experimentation & Optimisation Agent	P2
CRT-022	Abhilekh	Content Asset & Knowledge Library Agent	P2

P1 = foundational role; P2 = expansion role. All are proposed logical identities, not separately deployed models.

22

Proposed roles

12

P1 roles

10

P2 roles

Identity continuity: Aarya, Disha, Kalpana, Roop, Shuddhi, Anvesh, Lekha, Chitra, Prakash and Drishti retain their previously proposed pilot identities. Their final registry IDs will be mapped to the earlier pilot aliases.

4. Functional groups and reporting relationships

A. Creative Leadership

Aarya — CRT-001

Owns the overall creative and content strategy, quality standards, production direction, department performance, creative resource allocation recommendations and coordination with Operations and Client Experience.

Aarya does not bypass required client, clinical or human approval gates.

B. Content Strategy & Healthcare Research

Lead: Disha — CRT-002

Agent	Primary responsibility
Disha	Client content strategy, audience positioning, content pillars
Anvesh	Healthcare research, evidence gathering, source verification

Kathan	Articles, educational blogs, long-form content

This group converts client business objectives into evidence-informed content strategies.
For healthcare content, Anvesh must distinguish between clinical evidence, general educational information, promotional claims and unsupported assertions.

C. Editorial Planning & Content Development

Lead: Kalpana — CRT-003

Agent	Primary responsibility
Kalpana	Monthly calendars, campaign themes, editorial schedules
Lekha	Captions, short-form copy, campaign messages and CTAs
Sutradhar	Video scripts, storyboards and narrative structures
Pratibimb	Repurposing approved content across formats
Bhasha	Translation, localisation and language adaptation

This group manages the transformation from content strategy into production-ready briefs and copy.

D. Creative Direction & Production

Lead: Roop — CRT-004

Agent	Primary responsibility
Roop	Creative direction, visual briefs, production standards
Chitra	Static designs and template-driven visual production
Chalchitra	Video editing and motion creative workflows
Aakar	Client-specific brand adaptations
Rachna	Carousels, educational diagrams and infographics

Abhilekh	Approved asset library, versions and reuse rights

This group produces visual content according to approved brand guidelines and production specifications.

E. Social Media & Distribution

Lead: Tarangini — CRT-005

Agent	Primary responsibility
Tarangini	Platform strategy, publishing coordination, distribution standards
Prakash	Scheduling, approved publishing and publication verification
Sambhasha	Community monitoring, engagement classification and response drafting
Drishti	Social performance analysis and reporting
Prayog	Content experiments and performance optimisation

Tarangini is distinct from Tarang in Samrudhi's internal Marketing Department. Tarang markets Samrudhi; Tarangini manages client social media delivery.

F. Content Quality & Clinical Screening

Lead: Shuddhi — CRT-006

Agent	Primary responsibility
Shuddhi	Clinical-claim screening, factual checks, brand compliance
Pariksha	Platform specifications, link validation, formatting and technical QA

Shuddhi and Pariksha should have independent evaluation paths and must not simply approve their own production outputs.

Clinical screening by an AI agent is not equivalent to clinical approval. Content involving patient-specific advice, sensitive health claims, treatment outcomes or regulated promotion must be

routed to an appropriately qualified human reviewer.

5. Creative production workflow

01 · Client Brief

Smriti + Shruti (CEX)

Client context, scope, objectives, audience

02 · Research & Strategy

Anvesh + Disha

Evidence, content pillars, messaging direction

03 · Editorial Planning

Kalpana

Calendar, formats, deadlines, production briefs

04 · Copy & Creative Production

Lekha + Roop + Chitra

Copy, designs, scripts and other assets

05 · Quality & Clinical Screening

Shuddhi + Pariksha

Accuracy, brand, format and policy checks

06 · Human & Client Approval

CEX + Authorised Clinical Reviewer

Required approvals and final sign-off

07 · Publishing & Verification

Prakash + Tarangini

Approved scheduling, publication and validation

08 · Analytics & Improvement

Drishti + Prayog

Performance feedback and optimisation

Every content item must have a traceable content ID, client ID, brief, assigned agents, source evidence, version history, QA result, approvals, publishing record and performance feedback.

6. Creative, Content & Social Media Process Master

I propose 36 standard operating processes.

Process ID	Process	Primary agent
CRT-P01	Client brand and content context retrieval	Disha
CRT-P02	Audience and content objective analysis	Disha
CRT-P03	Healthcare topic research	Anvesh

CRT-P04	Medical source and claim verification	Anvesh
CRT-P05	Content pillar development	Disha
CRT-P06	Monthly content strategy	Disha
CRT-P07	Editorial calendar creation	Kalpana
CRT-P08	Content brief preparation	Kalpana
CRT-P09	Short-form copywriting	Lekha
CRT-P10	Captions, headlines and CTA development	Lekha
CRT-P11	Long-form article development	Kathan
CRT-P12	Video script and storyboard preparation	Sutradhar
CRT-P13	Creative brief and art direction	Roop
CRT-P14	Static visual asset production	Chitra
CRT-P15	Carousel and infographic production	Rachna
CRT-P16	Video and motion creative production	Chalchitra
CRT-P17	Brand adaptation and visual consistency	Aakar

CRT-P18	Content repurposing	Pratibimb
CRT-P19	Multilingual localisation	Bhasha
CRT-P20	Factual and clinical-claim screening	Shuddhi
CRT-P21	Brand and communication QA	Shuddhi
CRT-P22	Platform formatting and technical QA	Pariksha
CRT-P23	Content revision and correction	Lekha / Chitra
CRT-P24	Client approval coordination	Sweekriti (CEX)
CRT-P25	Social media scheduling	Prakash
CRT-P26	Approved content publishing	Prakash
CRT-P27	Publication verification	Prakash
CRT-P28	Social engagement monitoring	Sambhasha
CRT-P29	Community response drafting	Sambhasha
CRT-P30	Social analytics collection	Drishti
CRT-P31	Content performance reporting	Drishti
CRT-P32	Content experiment planning	Prayog

CRT-P33	Content optimisation recommendations	Prayog
CRT-P34	Asset versioning and archiving	Abhilekh
CRT-P35	Reusable template and content library maintenance	Abhilekh
CRT-P36	Monthly creative performance review	Aarya

Process CRT-P24 is executed by the CEX-owned agent Sweekriti. It is included here as an interdepartmental workflow dependency, not a duplicate agent position.

7. Initial role clarity and competencies

Agent	Essential competencies	Key result areas
Aarya	Creative leadership, orchestration, healthcare brand strategy	Quality, delivery performance, creative effectiveness
Disha	Content strategy, segmentation, messaging	Strategy acceptance, relevance
Kalpana	Editorial planning, scheduling, workflow coordination	Calendar quality, planning adherence
Roop	Art direction, design systems, creative QA	Creative quality, brand consistency
Tarangini	Platform strategy, social operations	Publishing reliability, social performance
Shuddhi	Healthcare content screening, evidence appraisal	Accuracy, claim-risk detection

Anvesh	Medical research, evidence retrieval, citation verification	Source reliability, research accuracy
Lekha	Healthcare copywriting, persuasive communication	Copy acceptance, factual correctness
Chitra	Visual production, design adaptation	Accepted assets, production efficiency
Prakash	Social platform operations, scheduling	Publishing accuracy, zero unauthorised releases
Drishti	Social analytics, reporting, insight generation	Reporting accuracy, actionable insights
Kathan	Long-form writing, healthcare education	Article quality, acceptance
Sutradhar	Scriptwriting, storytelling, storyboard development	Script quality, production readiness
Chalchitra	Video editing, motion design	Accepted videos, rendering efficiency
Aakar	Brand adaptation, design standards	Brand compliance, consistency
Rachna	Infographics, visual information design	Visual clarity, information accuracy
Sambhasha	Community management, response	Response quality, escalation accuracy

	classification	
Pratibimb	Content transformation, channel adaptation	Repurposing quality, efficiency
Bhasha	Translation, cultural localisation	Language accuracy, meaning preservation
Pariksha	Platform QA, technical validation	Technical defect detection
Prayog	Experiment design, analytics, optimisation	Test quality, validated improvements
Abhilekh	Asset management, metadata, rights tracking	Retrieval accuracy, version control

8. Departmental performance framework

A. Department-level KRAs and KPIs

KRA	Primary KPI	Proposed target
Content quality	First-pass human acceptance	≥90% after stabilisation
Delivery reliability	Approved deliverables completed within SLA	≥95%
Healthcare accuracy	Critical clinical errors escaping review	0
Publishing control	Unauthorised external publications	0
Workflow reliability	Eligible workflows completed successfully	≥95%
Efficiency	Production cycle time reduction	≥40% against baseline
Cost efficiency	Cost per accepted	≥25% against

	deliverable reduction	baseline
Traceability	Content with complete production and approval records	100%
Client experience	Revision reasons and feedback captured	100% of reviewed items

These are proposed pilot exit targets, not measured performance.

B. Agent-specific performance metrics

Agent	**Primary KPIs**
Aarya	Department SLA, first-pass acceptance, cost per accepted deliverable
Disha	Strategy acceptance, brief relevance, revision rate
Kalpana	Calendar completeness, scheduling accuracy, planning rework
Roop	Creative brief acceptance, brand compliance, production rework
Tarangini	Publishing plan adherence, platform compliance, content reach quality
Shuddhi	Clinical-risk detection, false-negative rate, screening turnaround
Anvesh	Verified claim rate, source relevance, research acceptance
Lekha	Copy first-pass acceptance, factual errors, copy turnaround
Chitra	Accepted designs, production

	cost, visual defects
Prakash	Correct publication rate, scheduling SLA, unauthorised posts
Drishti	Analytics accuracy, reporting timeliness, insight acceptance
Kathan	Article acceptance, factual accuracy, long-form turnaround
Sutradhar	Script acceptance, production usability, revisions
Chalchitra	Video acceptance, edit turnaround, technical defects
Aakar	Brand consistency, adaptation acceptance
Rachna	Infographic accuracy, visual clarity, revision rate
Sambhasha	Response classification accuracy, escalation compliance
Pratibimb	Repurposed content acceptance, cost savings
Bhasha	Translation accuracy, terminology compliance
Pariksha	Technical defect detection, false-positive rate
Prayog	Experiment validity, accepted recommendations
Abhilekh	Asset retrieval success, version integrity, rights compliance

The individual role documents will establish exact metric formulas, data sources, evaluation samples, targets, thresholds and corrective-action rules.

9. Content capacity engineering

Capacity should be calculated by content format, complexity, required research, clinical review and production effort.

A static promotional post, a medically detailed carousel and a patient education video should not be treated as equal units.

Proposed content complexity framework

Content type	Illustrative workload units
Simple static post	1.0
Standard carousel	2.0
Research-intensive medical carousel	3.5
Short-form video script	1.5
Edited short-form video	3.0
Long-form healthcare article	4.0
Complex infographic	3.0

These are planning weights, not validated production standards. Actual capacity must be measured separately for each agent and task class.

Interactive production workload calculator

Monthly Content Workload Planner

Illustrative workload across clients; not an agent throughput forecast.

Static posts

40

Standard carousels

20

Medical carousels

10

Edited short videos

12

Long-form articles

4

Total deliverables

86

Weighted workload units

167.0

Video workload includes editing but excludes separate scriptwriting where required. Final workload weights should incorporate actual QA, revision and approval effort.

10. Content Quality & Healthcare Compliance

A key architectural decision is to separate content generation, quality screening and final authorisation.

Control layer	Owner	Responsibility
Research evidence	Anvesh	Verify sources and factual support
Copy quality	Lekha / Disha	Produce and internally review content
Creative quality	Roop / Chitra	Brand, visual and design standards
Clinical-risk screening	Shuddhi	Identify unsupported or sensitive medical claims
Technical QA	Pariksha	Dimensions, links, formatting, platform requirements
Independent assurance	Satya / Assurance Office	Audit compliance and systemic failures
Human clinical approval	Authorised clinician	Approve clinically sensitive content
Client approval	Authorised client representative	Approve content for publication
Publication	Prakash	Release only approved versions

A failed critical gate must block publication regardless of the agent's overall performance score. Healthcare content should also be evaluated against the applicable advertising, professional conduct, privacy, consent and platform requirements for the relevant client and jurisdiction.

11. Creative & Content Command Centre

Aarya — Creative Production Dashboard

Proposed dashboard architecture; no live production data connected

Production Pipeline

Briefed · Drafting · QA · Approval · Published

Content Quality

Acceptance · Revisions · Defects

Agent Capacity
Workload · Queue · Saturation
Clinical Screening
Claim risk · Review status · Blocked
Editorial Delivery
Calendar adherence · Overdue items
Production Economics
Cost per accepted deliverable
Content Performance
Engagement · Reach · Conversion
Feedback & Improvement
Root causes · Retests · Improvements

12. Interdepartmental accountability

Department	Creative & Content responsibility	Partner responsibility
Client Experience	Produce against approved briefs	Collect requirements and client approvals
Operations	Provide production estimates and status	Assign resources, manage SLAs and dependencies
Paid Media & SEO	Produce campaign assets and content	Define technical performance requirements
Analytics	Act on content insights	Provide accurate performance data
Technology	Report tool requirements and failures	Maintain infrastructure and integrations
Finance	Provide production usage and cost data	Track profitability and financial controls
Assurance	Provide evidence and respond to findings	Independently audit quality and compliance

13. Agent performance feedback

Every creative agent will be evaluated across five dimensions.

Dimension	Evaluation focus
Output quality	Accuracy, clarity, relevance, originality and brand fit
Efficiency	Time, cost, rework and resource consumption
Reliability	Workflow completion, SLA adherence and tool stability
Business contribution	Accepted deliverables and relevant downstream outcomes
Feedback adaptability	Corrective-action effectiveness and regression avoidance

Evaluation cadence

- Every execution: Automated schema, policy, source and technical checks where applicable.
- Daily: Production monitoring, failures, SLA and capacity.
- Weekly: Sample-based quality reviews, human feedback and corrective actions.
- Monthly: Competency reassessment, cost benchmarking and agent version comparison.
- Quarterly: Role scope, autonomy, performance standards and capacity certification.

The evaluation system must store supporting evidence. An agent should not be able to certify its own competence or approve its own material changes.

14. Initial implementation — Content & Social Media Pilot

I recommend beginning with a smaller functional pod before deploying the complete 22-role organisation.

Release 1 — Content Production Pod

First pilot
Aarya
Leadership
Disha
Strategy
Kalpana
Planning
Roop
Creative Direction
Tarangini
Social Operations
