Shuddhi
Clinical Screening
Anvesh
Research
Lekha
Copywriting
Chitra
Design
Prakash
Publishing
Drishti
Analytics
Pariksha
Technical QA

These twelve logical responsibilities can initially be implemented with a smaller number of reusable agent runtimes and deterministic services.

Proposed pilot scope

Parameter	Initial proposal
Pilot clients	2–3 consenting healthcare clients
Pilot duration	90 days
Content types	Static posts, carousels, captions, selected short-form scripts
Monthly deliverables	120–200, subject to confirmed demand
Publishing	Human/client-approved only
Clinical content	Human-reviewed where required
Performance monitoring	Execution-level telemetry and structured feedback
Go-live approach	Shadow mode → limited production → controlled expansion

The first two weeks should establish actual baseline production costs, turnaround, quality, revision rates and workflow volumes before improvement claims are made.

Document 01A.07 | Digital Workforce Master Organisation Register

Department 07 — Paid Media, SEO & Growth Marketing

Department code: PMG Executive head: Proposed AI Chief Performance & Growth Officer Reports to: Daksh — AI COO (delivery accountability) Strategic coordination: Aarya — AI CCO; Mitra — AI CXO Human accountability: Performance Marketing Director / Designated Campaign Owner Deployment priority: P2 — Following the Content & Social Media Pilot Status: Proposed organisation structure

1. Department mandate

Build a scalable, AI-operated performance marketing engine that manages client acquisition campaigns, search visibility, lead-generation funnels and conversion optimisation, with measurable financial outcomes and controlled advertising expenditure.

Unlike Samrudhi's internal Marketing Department, which generates demand for Samrudhi itself, PMG is responsible for executing paid media, SEO and growth marketing services for Samrudhi's clients.

The department must deliver four outcomes: qualified demand, efficient customer acquisition, sustainable organic visibility and transparent attribution of marketing performance.

Core objectives

- Plan and manage paid search, paid social and other approved acquisition campaigns.
- Develop healthcare-specific keyword, audience and targeting strategies.
- Optimise campaigns for qualified leads and commercially meaningful outcomes—not vanity metrics alone.
- Build SEO and organic growth capabilities for healthcare clients.
- Improve landing-page conversion and lead-funnel performance.
- Monitor campaign expenditure, pacing, delivery and profitability.
- Maintain accurate conversion tracking, attribution and reporting.
- Detect underperformance, policy violations and budget anomalies early.
- Continuously test campaign strategies and optimise resource allocation.
- Establish reliable healthcare advertising compliance and human approval controls.

2. Proposed departmental hierarchy

Arjun — AI CEO

Daksh — AI COO

Delivery, capacity and SLA governance

Tejas

AI Head of Performance & Growth Marketing

PMG-001 · Department Leadership

Lakshya

Paid Media Strategy

Arohan

SEO & Organic Growth

Parivartan

Conversion & Funnel Optimisation

Metrika

Marketing Measurement
Raksha
Campaign Quality & Compliance
Performance Marketing Specialist Agents
Research · Campaigns · Budgeting · Bidding · SEO · CRO · Attribution · Optimisation
Identity adjustment: Lakshya was already registered in the CEO Office as the Enterprise KPI Intelligence Agent (CEO-003). To preserve permanent identity uniqueness, the proposed Paid Media Strategy Lead will instead be named Lakshman in the master register below. The hierarchy's Lakshya label is superseded by that register.

3. Departmental Agent Master Register

I propose 20 named agent roles: one department head, five functional leads and fourteen specialist agents.

Agent ID	Identity	Designation	Priority
PMG-001	Tejas	AI Head of Performance & Growth Marketing	P1
PMG-002	Lakshman	Paid Media Strategy & Campaign Lead	P1
PMG-003	Arohan	SEO & Organic Growth Lead	P1
PMG-004	Parivartan	Conversion & Funnel Optimisation Lead	P2
PMG-005	Metrika	Marketing Measurement & Attribution Lead	P1
PMG-006	Raksha	Campaign Quality & Compliance Lead	P1

PMG-007	Khojika	Keyword & Audience Research Agent	P1
PMG-008	Abhikalp	Campaign Architecture & Setup Agent	P1
PMG-009	Boli	Bidding & Budget Pacing Agent	P1
PMG-010	Lakshyaved	Campaign Optimisation Agent	P1
PMG-011	Sandarbh	Ad Copy & Creative Brief Agent	P1
PMG-012	Ankuran	Lead Funnel & Landing Page Agent	P2
PMG-013	Anveshana	SEO Keyword & Search Intent Agent	P1
PMG-014	Suchi	Technical SEO Audit Agent	P2
PMG-015	Sanket	On-page SEO Optimisation Agent	P2
PMG-016	Pratishtha	Local SEO & Reputation Growth Agent	P2
PMG-017	Maapan	Conversion	P1

		Tracking & Tagging Agent	
PMG-018	Vishleshan	Campaign Analytics & Insight Agent	P1
PMG-019	Prayogika	A/B Testing & Experimentation Agent	P2
PMG-020	Prahari	Budget Anomaly & Policy Risk Monitoring Agent	P1

P1 = foundational responsibility; P2 = expansion responsibility. Roles are logical positions, not a requirement for 20 separate agent runtimes.

20

Proposed roles

13

P1 roles

7

P2 roles

4. Functional groups and reporting relationships

A. Performance & Growth Leadership

Tejas — PMG-001

Owns the department's delivery strategy, client acquisition performance, campaign governance, financial efficiency, resource coordination and executive reporting.

Tejas is accountable for results but cannot independently approve advertising expenditure beyond delegated human-approved limits.

B. Paid Media Strategy & Execution

Lead: Lakshman — PMG-002

Agent	Primary responsibility
Lakshman	Paid media strategy, campaign architecture, performance objectives
Khojika	Audience, competitor, keyword

	and targeting research
Abhikalp	Campaign structure, configuration and launch preparation
Boli	Budget pacing, bidding recommendations and spend allocation
Lakshyaved	Campaign optimisation and performance improvement
Sandarbh	Ad copy, creative briefs and messaging variants

This group supports platforms such as Google Ads and Meta Ads, subject to the client's approved channels, policies and account permissions.

C. SEO & Organic Growth

Lead: Arohan — PMG-003

Agent	Primary responsibility
Arohan	SEO strategy, organic visibility and growth planning
Anveshana	Keyword research, search intent and content opportunities
Suchi	Technical SEO audits and site health
Sanket	On-page SEO, metadata, internal linking and optimisation
Pratishtha	Local SEO, business listings and reputation visibility

This group should prioritise relevant search demand and qualified traffic, not keyword rankings alone.

D. Conversion & Funnel Optimisation

Lead: Parivartan — PMG-004

Agent	Primary responsibility
Parivartan	Funnel strategy, conversion

	optimisation and lead quality
Ankuran	Landing-page structure, lead forms and funnel experience
Prayogika	Controlled A/B testing and experimentation

This group works closely with Client Experience, Creative and Analytics to improve the conversion of traffic into meaningful enquiries.

E. Marketing Measurement & Attribution

Lead: Metrika — PMG-005

Agent	Primary responsibility
Metrika	Measurement framework, attribution standards and data quality
Maapan	Conversion events, tagging and tracking validation
Vishleshan	Campaign performance analysis and actionable insights

Metrika should define the measurement contract, while the central Analytics Department owns shared data infrastructure and enterprise reporting standards.

F. Campaign Quality & Compliance

Lead: Raksha — PMG-006

Agent	Primary responsibility
Raksha	Campaign quality gates, healthcare advertising policy screening
Prahari	Spend anomalies, policy risks and performance exceptions

Raksha coordinates pre-launch and in-flight compliance checks. Independent Assurance retains audit authority.

5. Paid Media & Growth Workflow Architecture

01 · Client Goals & Scope

CEX + Tejas

Service scope, target outcomes, budget limits

02 · Market & Audience Intelligence
Khojika + Anveshana
Search demand, audiences, competitors, intent
03 · Channel & Campaign Strategy
Lakshman + Arohan
Channel mix, campaign structure, objectives
04 · Creative & Funnel Development
Sandarbh + CRT + Ankuran
Ads, landing pages, forms, CTAs
05 · Tracking & Quality Gates
Maapan + Raksha
Conversion validation, compliance, approvals
06 · Controlled Campaign Launch
Abhikalp + Human Campaign Owner
Approved settings, budget and release
07 · Monitoring & Optimisation
Boli + Lakshyaved + Prahari
Pacing, performance, risk and adjustments
08 · Reporting & Learning
Vishleshan + Metrika
Qualified leads, attribution, experiments

6. Paid Media, SEO & Growth Process Master

I recommend 34 standard operating processes.

Process ID	Process	Primary agent
PMG-P01	Client growth objective validation	Tejas
PMG-P02	Advertising account access and readiness	Abhikalp
PMG-P03	Audience and competitor research	Khojika
PMG-P04	Paid keyword research	Khojika
PMG-P05	Campaign strategy and channel selection	Lakshman
PMG-P06	Campaign structure and naming standards	Abhikalp
PMG-P07	Ad copy and creative	Sandarbh

	brief preparation	
PMG-P08	Landing-page and funnel requirement mapping	Ankuran
PMG-P09	Conversion event and tracking specification	Maapan
PMG-P10	Tagging and tracking validation	Maapan
PMG-P11	Healthcare advertising compliance screening	Raksha
PMG-P12	Campaign pre-launch QA	Raksha
PMG-P13	Budget and campaign launch approval	Tejas / Human Owner
PMG-P14	Campaign launch execution	Abhikalp
PMG-P15	Daily budget pacing	Boli
PMG-P16	Bidding and allocation recommendations	Boli
PMG-P17	Search term and audience optimisation	Lakshyaved
PMG-P18	Creative performance optimisation	Lakshyaved
PMG-P19	Campaign anomaly detection	Prahari
PMG-P20	Advertising policy issue management	Raksha
PMG-P21	SEO baseline and opportunity audit	Arohan

PMG-P22	SEO keyword and intent research	Anveshana
PMG-P23	Technical SEO auditing	Suchi
PMG-P24	On-page SEO recommendations	Sanket
PMG-P25	Local SEO and listing optimisation	Pratishtha
PMG-P26	Organic performance monitoring	Arohan
PMG-P27	Landing-page conversion analysis	Parivartan
PMG-P28	Funnel drop-off and lead quality analysis	Parivartan
PMG-P29	A/B test design and approval	Prayogika
PMG-P30	Experiment analysis and recommendations	Prayogika
PMG-P31	Campaign analytics and attribution	Vishleshan
PMG-P32	Weekly performance reporting	Vishleshan
PMG-P33	Monthly growth review and planning	Tejas
PMG-P34	Campaign learning and optimisation backlog	Metrika

7. Initial Role Clarity & Competencies

Agent	**Essential competencies**	**Key result areas**

Tejas	Growth strategy, campaign governance, budget economics	Client growth, campaign performance
Lakshman	Paid media strategy, channel planning	Campaign effectiveness, qualified leads
Arohan	SEO strategy, organic acquisition	Organic visibility, qualified traffic
Parivartan	CRO, funnel design, user behaviour	Conversion efficiency, lead quality
Metrika	Attribution, measurement governance	Data accuracy, measurement completeness
Raksha	Ad policy interpretation, healthcare compliance	Campaign compliance, quality gates
Khojika	Keyword research, audience intelligence	Research relevance, targeting quality
Abhikalp	Campaign configuration, platform operations	Setup accuracy, launch reliability
Boli	Budget pacing, bidding logic	Spend adherence, allocation efficiency
Lakshyaved	Performance optimisation, diagnostics	Validated campaign improvements
Sandarbh	Ad copywriting, creative briefing	Ad quality, creative acceptance

Ankuran	Landing pages, forms, UX	Funnel conversion, lead quality
Anveshana	SEO research, search intent	Keyword relevance, organic opportunity
Suchi	Technical SEO, crawl diagnostics	Technical issue detection
Sanket	On-page optimisation, structured content	On-page quality, implementation acceptance
Pratishtha	Local SEO, listings, reputation	Local visibility, listing accuracy
Maapan	Tracking, analytics configuration	Event accuracy, tracking completeness
Vishleshan	Marketing analytics, insight generation	Reporting accuracy, insight quality
Prayogika	Experiment design, statistical reasoning	Valid experiments, learning quality
Prahari	Anomaly detection, budget monitoring	Risk detection, escalation timeliness

8. Departmental KRAs & KPIs

A. Department-level performance indicators

KRA	**KPI**	**Measurement approach**
Qualified acquisition	Cost per qualified lead	Spend ÷ validated qualified leads
Campaign effectiveness	Qualified lead conversion rate	Qualified leads ÷ attributable sessions or clicks
Financial control	Budget adherence	Actual spend versus

		approved budget
SEO effectiveness	Qualified organic enquiries	Validated enquiries attributable to organic search
Funnel efficiency	Landing-page conversion	Valid conversions ÷ eligible sessions
Data reliability	Conversion tracking accuracy	Validated events ÷ audited events
Delivery reliability	Campaign and reporting SLA	On-time completed commitments
Compliance	Unauthorised spend and launches	Count of critical violations
Client outcomes	Accepted performance goals achieved	Results versus agreed targets

Targets for CPL, conversion, ROAS and SEO growth must be specific to the client's specialty, geography, offer, sales process and baseline. One universal performance target would be misleading.

B. Agent-specific performance metrics

Agent	**Primary KPIs**
Tejas	Department SLA, client goal attainment, budget governance
Lakshman	Strategy acceptance, qualified acquisition efficiency
Arohan	SEO plan execution, qualified organic growth
Parivartan	Conversion improvement, test acceptance
Metrika	Attribution completeness, data-quality issues

Raksha	Policy-risk detection, false negatives, launch compliance
Khojika	Keyword relevance, audience research acceptance
Abhikalp	Setup first-pass accuracy, launch turnaround
Boli	Pacing accuracy, approved-limit adherence
Lakshyaved	Accepted optimisation recommendations, measurable lift
Sandarbh	Ad copy acceptance, compliance rework
Ankuran	Landing-page acceptance, conversion performance
Anveshana	Search-intent accuracy, accepted opportunities
Suchi	Audit precision, technical issue prioritisation
Sanket	On-page implementation acceptance, technical accuracy
Pratishtha	Listing accuracy, local visibility
Maapan	Event validation rate, tracking defects
Vishleshan	Reporting accuracy, insight acceptance
Prayogika	Experiment validity, reproducibility
Prahari	Critical anomaly recall, false-alert rate, response latency

9. Capacity Engineering

Performance marketing agent capacity cannot be measured simply by the number of campaigns.

One small local clinic campaign may be relatively straightforward, while a multi-specialty hospital with several geographies, platforms and conversion pathways may require substantially more work.

Proposed capacity units

Agent group	Capacity unit
Campaign strategy	Active client growth plans
Paid media execution	Weighted campaign/ad-group workload
SEO	Weighted websites, pages and audits
CRO	Active funnels and experiments
Tracking	Conversion events and implementations
Analytics	Campaign datasets and reporting cycles
Compliance	Ads and campaigns reviewed
Budget monitoring	Active spending accounts and anomaly events

Illustrative account complexity weights

Account profile	Workload weight
Single-location specialty clinic	1.0
Multi-specialty clinic or small hospital	1.5
Multi-location healthcare organisation	2.5
Large hospital group / complex healthcare enterprise	4.0

These are preliminary modelling weights. They must be calibrated against actual campaign volume, spend, number of platforms, reporting requirements, change frequency and human review effort.

10. Paid Media Budget & Autonomy Governance

Financial controls are especially important because an automated campaign agent can incur real

expenditure.

Activity	AI authority	Human approval
Keyword and audience research	Autonomous	Periodic review
Campaign strategy	Draft and recommend	Strategy approval
Ad copy preparation	Autonomous drafting	External release approval
Campaign configuration	Prepare in draft state	Launch approval
Budget recommendations	Recommend	Approve limits
Bid adjustments	Within explicitly approved bounds after validation	Outside limits
New campaign launch	No autonomous launch initially	Required
Campaign pausing for verified risk	Permitted under approved emergency rules	Immediate notification
Tracking configuration	Staging and testing	Production approval initially
SEO recommendations	Autonomous	Material site changes
Client performance reporting	Prepare and validate	External reporting approval initially

The platform should enforce approved budgets, account-level permissions, change logs, rollback and alerting independently of the agent's natural-language instructions.

11. Healthcare Advertising Compliance

The department needs specialised safeguards for healthcare advertising.

Relevant risks include unsupported treatment claims, misleading outcome guarantees, inappropriate use of patient information, unapproved testimonials, sensitive targeting and

jurisdiction-specific restrictions on healthcare advertising.

Mandatory control layers

- Claim validation: Promotional statements must be supported and appropriate.
- Clinical screening: Medical claims requiring specialist review are escalated to an authorised human.
- Platform policy validation: Check the applicable advertising platform rules.
- Consent and privacy: Protect patient data and personal information.
- Commercial approval: Validate approved spend and campaign scope.
- Publication approval: Confirm authorised release.
- Continuous monitoring: Detect policy rejections, anomalies and unauthorised changes.

Raksha performs operational screening, while Satya's independent Assurance function audits compliance and control effectiveness.

12. Performance Marketing Command Centre

Tejas — Growth Performance Dashboard

Proposed dashboard architecture; no client advertising data connected

Acquisition

Qualified leads · CPL · Conversion

Budget & Pacing

Approved · Spent · Remaining

Organic Growth

Qualified traffic · Search visibility

Funnel Conversion

Landing pages · Drop-offs · Tests

Attribution

Source quality · Conversion accuracy

Campaign Compliance

Policy issues · Pending approvals

Risk & Exceptions

Spend anomalies · Tracking failures

Agent Capacity

Active campaigns · Queue · Utilisation

13. Interdepartmental Accountability

Department	PMG responsibility	Partner responsibility
Client Experience	Define campaign requirements and report outcomes	Own client communication and approvals
Operations	Provide execution status and capacity needs	Manage scheduling, dependencies and SLAs

Creative & Content	Specify ads and landing-page creative requirements	Produce and quality-check assets
Analytics	Define measurement needs and validate campaign insights	Own shared data systems and reporting standards
Finance	Supply spend and campaign cost records	Reconcile budgets and financial reporting
Technology	Identify platform and tracking requirements	Maintain integrations, access and infrastructure
Assurance	Provide evidence of campaign controls	Independently evaluate compliance

14. Implementation priorities

Release 1 — Paid Media & Measurement Foundation

P1

Tejas

Lakshman

Arohan

Metrika

Raksha

Khojika

Abhikalp

Boli

Lakshyaved

Sandarbh

Anveshana

Maapan

Vishleshan

Prahari

Focus on controlled campaign planning, setup, tracking, budget pacing, compliance, SEO research and performance reporting.

Release 2 — SEO, CRO & Growth Optimisation

P2

Parivartan

Ankuran
Suchi
Sanket
Pratishtha
Prayogika
Focus on conversion optimisation, technical SEO, local search and systematic experimentation.
Register correction: The P1 list contains 14 agents and the P2 list contains 6. These release assignments supersede the earlier summary counts.

SAMRUDHI AGENTIC AI
Document 01A.08 | Digital Workforce Master Organisation Register
Department 08 — Analytics, Intelligence & Reporting
Department code: DAT Executive head: Medha — AI Chief Data & Intelligence Officer Executive reporting: Arjun — AI CEO Operational coordination: Daksh — AI COO Human accountability: Founder / Designated Data & Analytics Owner Deployment priority: P1 — Foundational intelligence capabilities Status: Proposed organisation structure

1. Department mandate

Establish a centralised, trustworthy and scalable intelligence function that converts Samrudhi's operational, commercial, marketing and financial data into validated information, actionable insights and measurable business decisions.
The Analytics Department will function as the intelligence backbone of Samrudhi Agentic OS. It will serve two distinct purposes:

- Client intelligence: Measure the effectiveness of healthcare marketing services delivered to Samrudhi's clients.
- Enterprise intelligence: Measure Samrudhi's own sales, marketing, operations, finance, client experience and digital workforce performance.

The department must ensure that all AI agents operate on consistent, reliable and permission-controlled information.

Core objectives

- Establish a unified data architecture across departments and client accounts.
- Integrate approved sources such as Google Workspace, CRM, social platforms, advertising platforms and website analytics.
- Standardise metric definitions, data validation and reporting methodologies.
- Automate recurring client and management reports.
- Monitor marketing, sales, operational and financial performance.
- Generate forecasts, trend analysis and early-warning intelligence.
- Support evidence-based decisions by executive and functional agents.
- Measure the productivity, reliability and economics of Samrudhi's digital workforce.
- Maintain data lineage, access controls, quality records and auditability.
- Continuously improve reporting accuracy, speed and usefulness.

2. Proposed departmental hierarchy

Arjun — AI CEO
Medha

AI Chief Data & Intelligence Officer
DAT-001 · Enterprise Intelligence Leadership
Srotas
Data Integration & Engineering
Satvik
Data Quality & Governance
Drishti+
Business Intelligence & Reporting
Anuman
Forecasting & Decision Intelligence
Manak
Digital Workforce Analytics
Analytics Specialist Agents
Data Collection · Validation · Attribution · Dashboards · Forecasting · Reporting · Anomalies
Identity clarification: “Drishti+” above is a provisional functional label, not a second identity for Drishti in Creative. The permanent Business Intelligence Lead identity is Darshan in the register below. “Manak” is the previously proposed digital workforce evaluation identity, retained as a cross-functional specialist rather than duplicated.

3. Departmental Agent Master Register

I recommend 19 named roles: one executive head, five functional leads and thirteen specialist agents.

Agent ID	Identity	Designation	Priority
DAT-001	Medha	AI Chief Data & Intelligence Officer	P1
DAT-002	Srotas	Data Integration & Engineering Lead	P1
DAT-003	Satvik	Data Quality & Governance Lead	P1
DAT-004	Darshan	Business Intelligence & Reporting Lead	P1
DAT-005	Anuman	Forecasting & Decision	P2

		Intelligence Lead	
DAT-006	Manak	Digital Workforce Analytics Lead	P2
DAT-007	Sangrah	Data Collection & Ingestion Agent	P1
DAT-008	Shodhan	Data Cleaning & Validation Agent	P1
DAT-009	Samanjasya	Data Mapping & Reconciliation Agent	P1
DAT-010	Paribhasha	KPI Definition & Metric Governance Agent	P1
DAT-011	Prativedan	Client Reporting Agent	P1
DAT-012	Darpan	Dashboard & Visualisation Agent	P1
DAT-013	Aropan	Marketing Attribution Agent	P2
DAT-014	Pravritti	Trend & Pattern Intelligence Agent	P2
DAT-015	Purvanuman	Forecasting & Predictive	P2

		Analytics Agent	
DAT-016	Chetak	Anomaly & Early Warning Intelligence Agent	P1
DAT-017	Nirnayika	Decision Support & Recommenda-tion Agent	P2
DAT-018	Kushal	Agent Efficiency & Cost Intelligence Agent	P2
DAT-019	Sakshya	Data Lineage & Audit Evidence Agent	P2

P1 = foundational responsibility; P2 = expansion responsibility. Manak and Kushal are existing proposed identities assigned to this department rather than new duplicate agents.

19

Proposed roles

11

P1 roles

8

P2 roles

4. Functional groups and reporting relationships

A. Enterprise Intelligence Leadership

Medha — DAT-001

Owns the enterprise data strategy, analytics architecture, reporting governance, metric standardisation, decision intelligence and department performance.

Medha ensures that information provided to Arjun, Daksh and other executive agents is consistent, traceable and fit for decision-making.

B. Data Integration & Engineering

Lead: Srotas — DAT-002

Agent	Primary responsibility

Srotas	Data architecture, integration strategy, source connectivity
Sangrah	Collect data from authorised platforms and files
Samanjasya	Map identifiers, reconcile records and resolve source differences

This group manages the movement of data into the intelligence environment.
It should use deterministic connectors, scheduled jobs and event pipelines wherever possible rather than relying on language models to perform routine data transfers.

C. Data Quality & Governance

Lead: Satvik — DAT-003

Agent	Primary responsibility
Satvik	Data quality policies, governance and access requirements
Shodhan	Data cleaning, completeness checks, validation
Paribhasha	Standard metric definitions and calculation rules
Sakshya	Data lineage, source evidence and audit records

This group ensures that reports and dashboards do not contradict one another because different agents use different definitions.

D. Business Intelligence & Reporting

Lead: Darshan — DAT-004

Agent	Primary responsibility
Darshan	Business intelligence strategy and reporting standards
Prativedan	Recurring client and management reports
Darpan	Dashboard design, visualisation and presentation
Aropan	Marketing attribution and channel

	contribution

This group serves Samrudhi's client reporting and enterprise management reporting requirements.

E. Forecasting & Decision Intelligence

Lead: Anuman — DAT-005

Agent	Primary responsibility
Anuman	Forecasting methodology, decision intelligence governance
Pravritti	Trend and pattern analysis
Purvanuman	Predictive models and scenario forecasts
Chetak	Anomaly detection and early warnings
Nirnayika	Decision briefs and evidence-based recommendations

This group moves Samrudhi beyond historical reporting toward proactive intelligence.

F. Digital Workforce Analytics

Lead: Manak — DAT-006

Agent	Primary responsibility
Manak	Digital workforce metrics, benchmarking and evaluation analytics
Kushal	Agent productivity, capacity efficiency and execution economics

Manak measures and reports performance. Independent Assurance, led by Satya, owns final certification, critical compliance findings and performance adjudication.

5. Enterprise data architecture

Source Systems

CRM · Google Workspace · Ads · Analytics · Social · Finance · AgentOps

Data Ingestion & Integration

Srotas · Sangrah · Samanjasya

Validation & Governance

Satvik · Shodhan · Paribhasha · Sakshya

Trusted Intelligence Layer
Approved metrics · Data models · Access controls · Lineage
Client Intelligence
Campaigns · Leads · Outcomes
Enterprise Intelligence
Sales · Operations · Finance
Decision Intelligence
Forecasts · Risks · Recommendations
Workforce Intelligence
Agent Quality · Capacity · Cost
The trusted intelligence layer should be a governed data service, not a collection of agent-generated summaries.

6. Analytics Process Master

I recommend 32 standard operating processes.

Process ID	Process	Primary agent
DAT-P01	Data source registration and approval	Srotas
DAT-P02	Connector configuration and validation	Srotas
DAT-P03	Scheduled data ingestion	Sangrah
DAT-P04	Data freshness monitoring	Sangrah
DAT-P05	Source-to-target data mapping	Samanjasya
DAT-P06	Record matching and reconciliation	Samanjasya
DAT-P07	Data completeness validation	Shodhan
DAT-P08	Duplicate and inconsistent record detection	Shodhan

DAT-P09	Data quality exception management	Satvik
DAT-P10	KPI definition and formula governance	Paribhasha
DAT-P11	Metric calculation validation	Paribhasha
DAT-P12	Client-specific reporting requirements	Darshan
DAT-P13	Client campaign reporting	Prativedan
DAT-P14	Client monthly performance reports	Prativedan
DAT-P15	Enterprise management reporting	Darshan
DAT-P16	Dashboard development and maintenance	Darpan
DAT-P17	Marketing attribution analysis	Aropan
DAT-P18	Sales funnel analytics	Darshan
DAT-P19	Delivery and operations analytics	Darshan
DAT-P20	Financial performance analytics	Darshan
DAT-P21	Trend and variance analysis	Pravritti
DAT-P22	Forecast preparation	Purvanuman

DAT-P23	Forecast accuracy monitoring	Anuman
DAT-P24	Anomaly and exception detection	Chetak
DAT-P25	Early-warning intelligence	Chetak
DAT-P26	Decision brief preparation	Nirnayika
DAT-P27	Agent productivity reporting	Manak
DAT-P28	Agent capacity and efficiency analysis	Kushal
DAT-P29	Agent execution cost analysis	Kushal
DAT-P30	Data lineage and evidence tracking	Sakshya
DAT-P31	Reporting quality assurance	Satvik
DAT-P32	Monthly intelligence review	Medha

7. Initial role clarity and competencies

Agent	**Essential competencies**	**Key result areas**
Medha	Data strategy, analytics governance, executive intelligence	Trusted reporting, decision support
Srotas	Data architecture, APIs, integration engineering	Source availability, integration reliability

Satvik	Data governance, validation, access control	Data quality, policy compliance
Darshan	BI architecture, dashboard design, reporting	Reporting reliability, stakeholder usefulness
Anuman	Forecasting, modelling, decision analysis	Forecast quality, actionable intelligence
Manak	Agent performance metrics, evaluation design	Workforce performance visibility
Sangrah	Data extraction, APIs, scheduling	Ingestion success, freshness
Shodhan	Data validation, anomaly checks, reconciliation	Data accuracy, defect detection
Samanjasya	Entity matching, mapping, source reconciliation	Mapping accuracy, record consistency
Paribhasha	Metric definitions, data modelling	KPI consistency, formula accuracy
Prativedan	Reporting, summarisation, data interpretation	Report acceptance, timeliness
Darpan	Data visualisation, dashboard UX	Dashboard accuracy, usability
Aropan	Attribution modelling, marketing measurement	Attribution quality, methodology transparency

Pravritti	Trend analysis, statistical interpretation	Insight accuracy, pattern detection
Purvanuman	Forecasting models, uncertainty estimation	Forecast calibration, error
Chetak	Anomaly detection, alert prioritisation	Detection accuracy, alert usefulness
Nirnayika	Decision analysis, scenario comparison	Evidence quality, recommendation usefulness
Kushal	Unit economics, performance analytics	Cost and efficiency intelligence
Sakshya	Data lineage, audit trails, evidence management	Traceability, evidence completeness

8. Departmental KRAs & KPIs

A. Department-level KPIs

KRA	Primary KPI	Proposed target
Data reliability	Successful scheduled ingestion runs	≥99%
Data quality	Valid records in critical datasets	≥99%
Metric consistency	Approved KPI definitions used	100%
Reporting reliability	Reports delivered within SLA	≥98%
Traceability	Material metrics with source lineage	100%
Dashboard availability	Availability during agreed service windows	≥99%

	windows	
Decision support	Accepted actionable intelligence	Establish baseline
Forecasting	Forecast error and calibration	Baseline by model
Privacy	Unauthorised cross-client data exposure	0
Governance	Unapproved metric-definition changes	0

These are proposed engineering targets, not validated baselines.

B. Agent-specific performance metrics

Agent	Primary KPIs
Medha	Data reliability, reporting SLA, critical governance incidents
Srotas	Connector uptime, integration success, recovery time
Satvik	Data quality score, governance exception closure
Darshan	Report accuracy, dashboard reliability, stakeholder acceptance
Anuman	Forecast error, calibration, model review compliance
Manak	Workforce metric completeness, evaluation reproducibility
Sangrah	Ingestion success, data freshness, missing batches
Shodhan	Validation precision, defect detection, false positives
Samanjasya	Mapping accuracy, reconciliation discrepancies

Paribhasha	KPI definition coverage, formula consistency
Prativedan	Report acceptance, timeliness, unsupported claims
Darpan	Dashboard accuracy, refresh success, usability
Aropan	Attribution coverage, methodological validity
Pravritti	Insight acceptance, statistical correctness
Purvanuman	Forecast accuracy, uncertainty calibration
Chetak	Critical anomaly recall, alert latency, false alerts
Nirnayika	Evidence completeness, recommendation acceptance
Kushal	Cost attribution accuracy, efficiency analysis validity
Sakshya	Lineage completeness, audit evidence retrieval

9. Analytics Capacity Engineering

Data and analytics agents require workload definitions that account for source complexity, volume, data quality and processing cost.

Agent group	**Capacity unit**
Data integration	Active source connectors and ingestion jobs
Data validation	Records or datasets validated
KPI governance	Managed metric definitions and revisions
Reporting	Validated reports per reporting

	cycle
Dashboards	Active dashboards and refresh operations
Attribution	Client/channel attribution models
Forecasting	Active forecast models and update cycles
Anomaly detection	Monitored metric streams and alert events
Workforce analytics	Agent execution records and evaluations
Audit evidence	Traceable datasets and evidence requests

Capacity must be measured using successful, quality-validated outputs rather than raw records processed or reports generated.

10. Data Governance & Privacy Architecture

Samrudhi's analytics infrastructure must separate client data from enterprise data and enforce least-privilege access.

Proposed data access layers

Layer	Example information	Access principle
Client operational data	Campaigns, leads, content and client reporting	Client-specific isolation
Samrudhi enterprise data	Revenue, costs, employees, pipeline	Role-based internal access
Agent workforce data	Execution logs, competency, performance	Approved management and assurance access
Restricted healthcare data	Patient-related or sensitive information	Explicit authorisation and lawful purpose
Aggregated intelligence	Approved benchmarks and trends	Privacy-preserving aggregation

The system must not permit one client's confidential information to influence another client's outputs unless an explicitly approved, lawful and appropriately de-identified use is established.

Critical controls

- Client and tenant isolation.
- Role-based access and tool permissions.
- Source lineage and calculation versioning.
- Data minimisation and retention policies.
- Restricted handling of personal and patient information.
- Human approval for external release of sensitive reports.
- Audit logging of data access and material transformations.
- Detection of unusual access and cross-client data leakage.

11. Analytics & Intelligence Command Centre

Medha — Enterprise Intelligence Dashboard

Proposed dashboard architecture; no live data connected

Data Health

Sources · Freshness · Completeness

Anomalies

Critical · Major · Informational

Digital Workforce

Agent Quality · Capacity · Cost

Audit & Lineage

Source Traceability · Changes · Access

12. Interdepartmental Accountability

Department	Analytics responsibility	Partner responsibility
CEO Office	Deliver validated enterprise intelligence	Set business objectives and decision priorities
Sales	Provide funnel analytics and forecasts	Maintain accurate CRM records

Samrudhi Marketing	Measure demand and acquisition	Define campaigns and lead objectives
Client Experience	Generate client reporting intelligence	Validate client reporting needs and communications
Operations	Measure throughput, capacity and delivery	Maintain workflow execution records
Creative & Content	Measure content performance	Supply content metadata and outcomes
Paid Media & SEO	Validate campaign attribution and results	Maintain campaign and tracking configurations
Finance	Provide reconciled financial analytics	Own accounting records and financial approval
Technology	Specify data requirements and issues	Maintain connectors, storage and infrastructure
Assurance	Supply data and evidence for audits	Independently evaluate control effectiveness

13. Performance Feedback & Continuous Improvement

Each analytics agent should receive feedback from:

- Data quality tests: Accuracy, completeness, consistency, freshness and validity.
- Independent evaluation: Reproducibility, statistical correctness, unsupported inference and policy compliance.
- Stakeholder acceptance: Usefulness, clarity and relevance of reports and recommendations.
- System telemetry: Reliability, latency, execution cost and capacity utilisation.
- Outcome review: Whether alerts, forecasts and recommendations improved decisions or operations.

Forecasting agents must be assessed using out-of-sample evidence and uncertainty calibration, not merely whether a forecast sounds plausible.

Reporting agents must distinguish observed facts, estimates, assumptions and recommendations.

14. Implementation Priorities

Release 1 — Trusted Reporting Foundation

P1

Medha

Srotas

Satvik

Darshan

Sangrah

Shodhan

Samanjasya

Paribhasha

Prativedan

Darpan

Chetak

Focus on source integration, data validation, KPI definitions, reporting, dashboards and critical anomaly monitoring.

Release 2 — Predictive & Workforce Intelligence

P2

Anuman

Manak

Aropan

Pravritti

Purvanuman

Nirnayika

Kushal

Sakshya

Focus on attribution, forecasting, decision intelligence, agent performance economics and advanced audit evidence.

Implementation note: The analytics foundation should be built alongside the initial Creative & Content pilot, because agent evaluation and continuous improvement depend on trustworthy execution data. The full department does not need to be deployed before the pilot begins.

SAMRUDHI AGENTIC AI

Document 01A.09 | Digital Workforce Master Organisation Register

Department 09 — Finance & Administration

Department Code: FIN Executive Head: Niti — AI Chief Financial Officer Reports To: Arjun — AI CEO Human Accountability: Founder / Authorised Finance Head Deployment Priority: P1 — Financial control foundation Status: Proposed organisational structure

1. Department mandate

Build an AI-operated, human-governed Finance & Administration function responsible for financial discipline, revenue assurance, cost control, profitability, budgeting, statutory compliance coordination and administrative efficiency across Samrudhi.
The department must provide complete financial visibility into both the conventional agency business and the emerging agentic workforce.
The objective is to make every client account, service line, workflow and AI agent economically measurable, while ensuring that financial commitments and transactions remain under authorised human control.

Core objectives

- Ensure accurate and timely client billing, collections and financial reconciliation.
- Maintain financial records, management accounts and supporting documentation.
- Monitor client-level revenue, contribution margins and profitability.
- Control vendor expenses, subscriptions, infrastructure and AI execution costs.
- Establish annual budgets, monthly forecasts and cash-flow visibility.
- Coordinate tax, statutory, contractual and audit requirements.
- Maintain procurement, vendor and administrative controls.
- Monitor outstanding receivables and payment obligations.
- Support pricing, service costing and commercial decision-making.
- Provide financial intelligence to the AI CEO, Operations and Sales.
- Maintain audit-ready financial records and approval trails.
- Support scalable administration without proportionate growth in back-office headcount.

2. Proposed departmental hierarchy

Arjun — AI CEO

Niti

AI Chief Financial Officer

FIN-001 · Financial Strategy, Governance & Administration

Lekhan

Accounting & Financial Control

Dhanika

Revenue Assurance & Receivables

Arth

Financial Planning & Business Economics

Sampada

Procurement & Administration

Vidhi

Compliance & Financial Governance

Finance & Administration Specialist Agents

Billing · Collections · Accounting · Budgeting · Costing · Procurement · Compliance · Reporting

3. Departmental Agent Master Register

I propose 20 named logical agent roles, comprising one executive, five functional leads and fourteen specialists.

Agent ID	Identity	Designation	Priority

FIN-001	Niti	AI Chief Financial Officer	P1
FIN-002	Lekhan	Accounting & Financial Control Lead	P1
FIN-003	Dhanika	Revenue Assurance & Receivables Lead	P1
FIN-004	Arth	Financial Planning & Business Economics Lead	P1
FIN-005	Sampada	Procurement & Administration Lead	P2
FIN-006	Vidhi	Financial Compliance & Governance Lead	P1
FIN-007	Beejak	Client Billing & Invoice Preparation Agent	P1
FIN-008	Vasooli	Accounts Receivable & Collection Coordination Agent	P1
FIN-009	Milaan	Bank & Ledger Reconciliation	P1

		Reconciliation Agent	
FIN-010	Bhugtan	Accounts Payable & Payment Preparation Agent	P1
FIN-011	Kosh	Cash Flow & Treasury Intelligence Agent	P1
FIN-012	Aayojan	Budgeting & Financial Forecasting Agent	P2
FIN-013	Labh	Client Profitability & Contribution Analysis Agent	P1
FIN-014	Lagaat	Service Costing & AI Workforce Economics Agent	P1
FIN-015	Kharid	Procurement & Vendor Coordination Agent	P2
FIN-016	Naveekaran	Subscription, Licence & Contract Renewal Agent	P2

FIN-017	LekhaPatra	Financial Documentation & Records Agent	P1
FIN-018	Anupalan	Tax & Statutory Compliance Coordination Agent	P2
FIN-019	Prashasan	General Administration & Asset Management Agent	P2
FIN-020	Vittadarshi	Financial MIS & Management Reporting Agent	P1

P1 = foundational responsibility; P2 = expansion responsibility. The register defines accountability, not a requirement to deploy twenty independent AI systems.

20

Logical agent roles

15

P1 responsibilities

5

P2 responsibilities

4. Functional groups and reporting relationships

A. Finance Executive Leadership

Niti — FIN-001

Owns financial strategy, revenue assurance, cash-flow management, profitability, budget governance, financial reporting and administrative accountability.

Niti provides financial intelligence to Arjun and recommends actions to improve Samrudhi's financial performance.

Niti cannot independently transfer funds, sign contracts, change banking instructions or override accounting controls.

B. Accounting & Financial Control

Lead: Lekhan — FIN-002

Agent	Primary responsibility
Lekhan	Accounting control, reconciliations, financial close
Milaan	Bank, ledger and payment reconciliation
Bhugtan	Vendor bill verification and payment preparation
LekhaPatra	Financial document collection, classification and retention

This group maintains reliable financial records and supports the human accountant or finance professional responsible for accounting decisions.

C. Revenue Assurance & Receivables

Lead: Dhanika — FIN-003

Agent	Primary responsibility
Dhanika	Revenue monitoring, receivables governance and collection performance
Beejak	Invoice preparation and billing schedule tracking
Vasooli	Outstanding receivables, payment reminders and collection coordination

This group ensures that approved client services are billed correctly and that collections are monitored systematically.

D. Financial Planning & Business Economics

Lead: Arth — FIN-004

Agent	Primary responsibility
Arth	Financial planning, unit economics and profitability strategy
Kosh	Cash-flow visibility and liquidity forecasts

Aayojan	Budgets, rolling forecasts and scenario modelling
Labh	Client-level contribution margins and profitability
Lagaat	Service costing, AI execution costs and resource economics
Vittadarshi	Financial MIS, dashboards and management reporting

This group will be especially important as Samrudhi transitions toward agentic delivery.

E. Procurement & Administration

Lead: Sampada — FIN-005

Agent	Primary responsibility
Sampada	Procurement policy, vendor administration and administrative efficiency
Kharid	Purchase requests, vendor comparisons and procurement coordination
Naveekaran	Subscription, licence and contract renewal tracking
Prashasan	Administrative records, asset registers and general coordination

This group manages the administrative infrastructure required to run the business efficiently.

F. Compliance & Financial Governance

Lead: Vidhi — FIN-006

Agent	Primary responsibility
Vidhi	Financial control policies, compliance coordination and exception escalation
Anupalan	Tax and statutory obligation tracking, document preparation

Vidhi manages operational compliance coordination. Independent Assurance retains audit authority, while qualified human professionals remain responsible for statutory filings, legal interpretations and certifications.

5. Finance operating architecture

Commercial & Operational Inputs
Signed contracts · Client scopes · Delivery records · Vendor bills · AI usage
Revenue Cycle
Billing · Receivables · Collections
Expenditure Cycle
Vendor bills · Procurement · Payments
Financial Records
Ledgers · Reconciliation · Documents
Cost Intelligence
Client margins · AI costs · Forecasts
Financial Control & Validation
Reconciliation · Approval matrix · Tax review · Audit evidence
Management Intelligence
Revenue · Margins · Cash flow · Forecasts · Financial risks

6. Finance & Administration Process Master

I recommend 36 standard operating processes.

Process ID	Process	Primary agent
FIN-P01	Client commercial master creation	Dhanika
FIN-P02	Contract and billing schedule validation	Beejak
FIN-P03	Recurring client invoice preparation	Beejak
FIN-P04	One-time and additional service billing	Beejak
FIN-P05	Invoice review and authorisation routing	Lekhan
FIN-P06	Invoice dispatch and acknowledgement	Beejak
FIN-P07	Accounts receivable ageing	Vasooli

	ageing	
FIN-P08	Payment reminder preparation	Vasooli
FIN-P09	Collection escalation coordination	Dhanika
FIN-P10	Customer receipt reconciliation	Milaan
FIN-P11	Vendor onboarding and verification	Kharid
FIN-P12	Purchase request and approval	Kharid
FIN-P13	Vendor bill intake and validation	Bhugtan
FIN-P14	Payment approval preparation	Bhugtan
FIN-P15	Payment execution verification	Milaan
FIN-P16	Bank and ledger reconciliation	Milaan
FIN-P17	Monthly accounting close coordination	Lekhan
FIN-P18	Financial document classification	LekhaPatra
FIN-P19	Revenue and expense variance analysis	Arth
FIN-P20	Annual and quarterly budgeting	Aayojan
FIN-P21	Rolling revenue and expense forecast	Aayojan

FIN-P22	Cash-flow forecasting	Kosh
FIN-P23	Client profitability analysis	Labh
FIN-P24	Service-line contribution analysis	Labh
FIN-P25	AI execution cost allocation	Lagaat
FIN-P26	Cost per accepted deliverable analysis	Lagaat
FIN-P27	Vendor cost and subscription optimisation	Sampada
FIN-P28	Licence and contract renewal monitoring	Naveekaran
FIN-P29	Asset and administrative register maintenance	Prashasan
FIN-P30	Tax and statutory compliance calendar	Anupalan
FIN-P31	Compliance documentation coordination	Anupalan
FIN-P32	Financial exception and control breach escalation	Vidhi
FIN-P33	Financial MIS preparation	Vittadarshi
FIN-P34	Monthly financial performance review	Niti

FIN-P35	Audit evidence and document retrieval	LekhaPatra
FIN-P36	Financial process improvement and CAPA	Vidhi

Each process will later receive an SOP with inputs, workflow steps, accountable agents, human approval gates, outputs, KPIs, exceptions and audit requirements.

7. Initial role clarity and competencies

Agent	**Essential competencies**	**Key result areas**
Niti	Financial strategy, governance, business economics	Profitability, cash flow, financial discipline
Lekhan	Accounting controls, reconciliation, close management	Financial accuracy, timely close
Dhanika	Revenue assurance, receivables management	Billing completeness, collections
Arth	Financial modelling, budgeting, unit economics	Forecast quality, margin intelligence
Sampada	Procurement governance, administration	Cost control, administrative reliability
Vidhi	Financial controls, compliance coordination	Control adherence, exception resolution
Beejak	Contract interpretation, invoice preparation	Billing accuracy, timeliness

Vasooli	Receivables analysis, collection communication	Collection follow-up, ageing
Milaan	Reconciliation, transaction matching	Reconciliation accuracy
Bhugtan	Invoice validation, payable processing	Payment preparation accuracy
Kosh	Cash-flow forecasting, liquidity analysis	Forecast accuracy, early warnings
Aayojan	Budgeting, scenario planning	Budget accuracy, forecast usefulness
Labh	Client profitability, contribution analysis	Margin visibility, allocation accuracy
Lagaat	Cost attribution, AI economics	Service costing, cost efficiency
Kharid	Vendor research, procurement	Vendor evaluation, procurement compliance
Naveekaran	Contract tracking, renewal management	Renewal timeliness, avoidable expenses
LekhaPatra	Financial document management	Completeness, retrieval accuracy
Anupalan	Compliance calendars, documentation	Deadline tracking, filing readiness
Prashasan	Administration, asset management	Register accuracy, task completion
Vittadarshi	Financial MIS, reporting, variance analysis	Report accuracy, timeliness

All agents must be competency-tested using representative financial scenarios, including incorrect invoices, duplicate payments, mismatched bank records and incomplete documentation.

8. Departmental KRAs & KPIs

A. Finance Department Scorecard

KRA	KPI	Proposed target
Revenue assurance	Eligible client billing completeness	100%
Billing accuracy	First-pass accurate invoices	≥99%
Receivables	Collection efficiency and overdue ageing	Baseline, then improve
Financial accuracy	Unresolved material reconciliation differences	0 at close
Reporting	Monthly MIS delivered within agreed SLA	100%
Cash flow	Forecast accuracy and liquidity visibility	Baseline by horizon
Profitability	Client contribution margin	Client-specific targets
Cost governance	Unauthorised expenditure	0
Compliance	Missed material statutory deadlines	0
Auditability	Material transactions with supporting evidence	100%

These are proposed control standards, not current measured performance.

B. Agent-specific KPIs

Agent	Primary KPIs

Niti	Cash forecast reliability, profitability, control incidents
Lekhan	Close timeliness, reconciliation exceptions, accounting rework
Dhanika	Billing completeness, DSO, overdue receivables
Arth	Forecast error, variance explanation, model acceptance
Sampada	Procurement compliance, avoidable subscription cost
Vidhi	Control breach detection, compliance readiness
Beejak	Invoice accuracy, billing SLA, missed invoices
Vasooli	Follow-up SLA, overdue ageing, communication accuracy
Milaan	Reconciliation accuracy, unmatched transaction ageing
Bhugtan	Duplicate bill detection, payment preparation accuracy
Kosh	Cash-flow forecast error, early liquidity warnings
Aayojan	Budget variance, forecast calibration
Labh	Margin calculation accuracy, cost allocation coverage
Lagaat	AI cost attribution, cost per accepted deliverable
Kharid	Procurement cycle time, vendor

	evaluation completeness
Naveekaran	Renewal notice timeliness, missed renewals
LekhaPatra	Document completeness, retrieval success
Anupalan	Compliance calendar accuracy, deadline adherence
Prashasan	Asset register accuracy, administrative SLA
Vittadarshi	MIS accuracy, report timeliness, unsupported figures

9. Financial architecture for an agentic organisation

Traditional agencies usually measure payroll, outsourcing costs, software subscriptions and campaign-related expenses.

Samrudhi's agentic operating model requires an additional layer: digital workforce economics. Every accepted deliverable should have an attributable production cost.

Proposed cost structure

Cost category	Examples
AI model execution	Input/output tokens, inference requests
AI tools	Search, image generation, transcription, other APIs
Workflow infrastructure	Orchestration, queues, compute, storage
Human oversight	Review, corrections, approvals, exception handling
Production software	Design, editing, scheduling, analytics tools
External specialists	Designers, editors, clinicians, freelancers
Rework	Revisions, failed generations,

	rejected outputs
Shared overhead	Allocated operations and administration

The accounting treatment of each cost may differ. Management costing should be kept distinct from statutory financial accounting.

Core financial equations

$$\text{Client Contribution}$$
$$\text{Recognised Client Revenue}$$
$$\text{Attributable Delivery Costs}\text{Contribution Margin}$$
$$\frac{\text{Client Contribution}}{\text{Recognised Client Revenue}}$$

$$\times100\text{Cost per Accepted Deliverable}$$

\frac{\text{Total Attributable Production Cost}}
{\text{Number of Accepted Deliverables}}

These metrics should be tracked monthly and by client, service line and production workflow.

10. Illustrative client profitability calculator

This calculator demonstrates the intended management accounting model. All values are editable assumptions, not Samrudhi's actual financial results.

Monthly Client Unit Economics

Illustrative INR-denominated management model

Monthly client revenue
₹1,00,000
Human delivery and review
₹25,000
AI execution costs
₹8,000
Attributable software
₹7,000
Other delivery costs
₹10,000
Accepted deliverables per month
50
Monthly contribution
₹50,000
Contribution margin
50.0%

Attributable delivery cost
₹50,000
Cost per accepted deliverable
₹1,000
Excludes unallocated corporate overhead, tax and financing costs. Advertising media spend paid on behalf of a client should be treated separately according to contractual and accounting arrangements.

11. Financial authority and approval controls

Financial agents must operate within clearly defined authority boundaries.

Activity	AI authority	Human authorisation
Prepare invoices	Draft and validate	Required before issue initially
Send routine payment reminders	Draft and queue	Approved communication policy
Reconcile transactions	Match and flag differences	Material exceptions and close approval
Prepare vendor payment batches	Draft only	Required for every payment
Execute bank transfers	Not permitted	Human-controlled banking
Change bank beneficiary details	Not permitted	Independent verification and approval
Recommend budgets	Permitted	Approval required
Change client pricing	Recommend only	Commercial approval
Approve procurement	Within future delegated rules only	Required initially
Submit statutory filings	Prepare and validate	Authorised human/ professional
Sign contracts	Not permitted	Authorised signatory
Produce financial MIS	Draft and validate	Management review for material reports

Mandatory segregation of duties

No agent should control the entire financial transaction lifecycle.

For example:

Beejak prepares invoice → Lekhan validates → authorised human approves → system issues → Milaan reconciles receipt.

Similarly:

Bhugtan prepares payment → Lekhan verifies → authorised human approves and executes → Milaan independently reconciles.

This segregation should be enforced through application permissions, not merely through instructions to the agents.

12. Finance & Administration Command Centre

Niti — Financial Management Dashboard

Proposed dashboard architecture; live accounting data not connected

Revenue

MRR · Billed · Collected · Outstanding

Cash & Liquidity

Bank balance · Forecast · Obligations

Receivables

Ageing · Overdue · Collection follow-up

Client Profitability

Revenue · Delivery cost · Contribution

AI Workforce Economics

Model costs · Tool costs · Accepted output

Accounting & Close

Reconciliations · Exceptions · Status

Compliance & Renewals

Due dates · Filings · Subscriptions

Financial Controls

Approvals · Exceptions · Audit trail

13. Interdepartmental accountability

Department	Finance responsibility	Partner responsibility
CEO Office	Financial intelligence, budgets, profitability	Approve strategic priorities and major commitments
Sales	Validate pricing economics and contract terms	Own proposals and commercial closure

Samrudhi Marketing	Track internal marketing expenditure	Own campaigns and marketing performance
Client Experience	Resolve billing and collection coordination issues	Own client relationship and communication
Operations	Measure delivery cost and utilisation	Supply validated execution and resource data
Creative & Content	Attribute production expenses	Supply production usage and rework data
Paid Media & SEO	Reconcile media spend and management fees	Maintain campaign spend and platform records
Analytics	Define finance data requirements and validated metrics	Maintain trusted reporting and data pipelines
Technology	Control AI tool and infrastructure spending	Maintain usage telemetry, systems and permissions
Assurance	Provide financial evidence and control records	Independently audit control effectiveness

14. Agent capacity management

Finance agents require capacity measures based on transaction volume, complexity, exception rates and review effort.

Agent group	Capacity unit
Billing	Invoices prepared and validated
Receivables	Active accounts and collection

	cases
Reconciliation	Transactions matched and exceptions resolved
Payables	Vendor bills processed
Cash flow	Forecast periods and cash-flow scenarios
Budgeting	Cost centres and forecast revisions
Profitability	Client and service-line cost models
Procurement	Purchase requests and vendor evaluations
Compliance	Obligations, deadlines and filing packages
Administration	Assets, subscriptions and service requests
Financial reporting	Validated reports and reporting cycles

Capacity must be evaluated on accepted, accurate and compliant outputs—not transaction counts alone.

15. Performance feedback and continuous improvement

Finance agents should receive structured feedback through four mechanisms:

1. Transaction validation: Invoice correctness, duplicate detection, reconciliation accuracy and document completeness.
2. Independent control evaluation: Approval compliance, access restrictions, segregation of duties and exception handling.
3. Financial outcome evaluation: Billing completeness, receivable ageing, cost allocation accuracy and forecast performance.
4. Human finance review: Accounting judgement, reporting usefulness, escalation quality and compliance readiness.

Critical failures such as unauthorised payments, exposure of confidential financial information or incorrect banking instructions must override aggregate performance scores and trigger immediate restriction or suspension of the affected workflow.

16. Implementation priorities

Release 1 — Financial Control & Profitability Foundation
P1
Niti
Lekhan
Dhanika
Arth
Vidhi
Beejak
Vasooli
Milaan
Bhugtan
Kosh
Labh
Lagaat
LekhaPatra
Vittadarshi
Focus on billing, collections, reconciliation, cost attribution, client profitability and financial MIS.
Release 2 — Planning, Procurement & Administration
P2
Sampada
Aayojan
Kharid
Naveekaran
Anupalan
Prashasan
Focus on rolling forecasts, procurement, subscription control, compliance coordination and administrative workflows.
Priority reconciliation: The master register and implementation groups establish 14 P1 roles and 6 P2 roles. These supersede the preliminary summary counts above.

SAMRUDHI AGENTIC AI
Document 01A.10 | Digital Workforce Master Organisation Register
Department 10 — Technology, MCP & AgentOps
Department Code: TEC Executive Head: Sutra — AI Chief Technology Officer Reports To: Arjun — AI CEO Operational Coordination: Daksh — AI COO Human Accountability: Founder / Authorised Technology & Security Owner Deployment Priority: P0 — Critical Infrastructure Status: Proposed organisational structure
1. Department mandate
Establish, operate and continuously improve the technological infrastructure required to transform Samrudhi into an agentic-native, AI-operated, human-governed organisation. Technology, MCP & AgentOps will be responsible for developing and operating two core

systems:

- Samrudhi Agentic OS: The orchestration, integration, knowledge, execution and governance infrastructure supporting AI-operated business functions.
- Digital Workforce Management System (DWMS): The central system for managing every AI agent's identity, role, competency, capacity, permissions, assignments, performance, feedback and lifecycle.

This department is not merely an IT support function. It is responsible for building the technological infrastructure through which Samrudhi's digital workforce operates.

Strategic objectives

- Establish a secure, scalable and modular AI agent architecture.
- Maintain a permanent identity and registry for every approved agent.
- Enable controlled integrations through MCP servers, APIs and other supported interfaces.
- Build reliable workflow orchestration across departments.
- Maintain client-specific knowledge, context and access boundaries.
- Provide model routing, tool execution and cost controls.
- Measure agent execution quality, reliability, latency and resource consumption.
- Support testing, deployment, versioning and rollback of agents.
- Implement security, permissions, monitoring and incident response.
- Enable continuous improvement without uncontrolled agent self-modification.
- Maintain business continuity and disaster recovery.
- Provide the technical foundation for scaling from a small content-production pilot to enterprise-wide operations.

2. Technology organisation structure

Arjun — AI CEO

Sutra

AI Chief Technology Officer

TEC-001 · Technology, Platform & AgentOps Leadership

Vinyas

Platform Architecture & Engineering

Setubandh

MCP & Systems Integration

Yantra

Agent Runtime & Orchestration

SmritiX

Knowledge & Context Infrastructure

Suraksha

Security & Reliability

Niyantrak

AgentOps & Digital Workforce Systems

Technology Specialist Agents & Deterministic Services

Registry · APIs · Tools · Workflows · Context · Testing · Monitoring · Security · Deployment

The hierarchy uses "SmritiX" as a functional label. The permanent identity for the Knowledge & Context Infrastructure Lead is Smaran, avoiding confusion with Smriti, the Client Knowledge

Agent in CEX.

3. Departmental Agent Master Register

I recommend 24 named logical roles: one executive, six functional leads and seventeen specialist agents.

Agent ID	Identity	Designation	Priority
TEC-001	Sutra	AI Chief Technology Officer	P0
TEC-002	Vinyas	Platform Architecture & Engineering Lead	P0
TEC-003	Setubandh	MCP & Systems Integration Lead	P0
TEC-004	Yantra	Agent Runtime & Workflow Orchestration Lead	P0
TEC-005	Smaran	Knowledge & Context Infrastructure Lead	P0
TEC-006	Suraksha	Security, Access & Reliability Lead	P0
TEC-007	Niyantrak	AgentOps & Digital Workforce Systems Lead	P0
TEC-008	Pehchaan	Agent Identity & Registry Agent	P0

TEC-009	Jod	MCP Connector & API Integration Agent	P0
TEC-010	Adhikar	Tool Permissions & Access Control Agent	P0
TEC-011	Pravahika	Workflow Runtime & Execution Agent	P0
TEC-012	Sandarbhika	Context Assembly & Retrieval Agent	P0
TEC-013	Smritikosh	Knowledge Base & Memory Management Agent	P1
TEC-014	Margdarshak	Model Routing & Inference Optimisation Agent	P1
TEC-015	Nirikshak	Observability & Execution Telemetry Agent	P0
TEC-016	Parikshak	Agent Testing & Evaluation Engineering Agent	P0
TEC-017	Sanskaran	Agent Versioning &	P0

		Versioning & Release Management Agent	
TEC-018	Punarsthapana	Rollback & Recovery Coordination Agent	P1
TEC-019	Chaukidar	Security Monitoring & Threat Detection Agent	P0
TEC-020	Upalabdh	Infrastructure Reliability & Availability Agent	P1
TEC-021	Sanchay	Data Storage & Retention Management Agent	P1
TEC-022	Kshamatra	Digital Workforce Capacity Infrastructure Agent	P1
TEC-023	Pratikriya	Technology Incident & Problem Management Agent	P1

TEC-024	Nirman	Developer Enablement & Internal Tooling Agent	P2

P0 = required technical foundation; P1 = operational expansion; P2 = advanced capability. These are responsibilities to engineer, not 24 separate model instances.

24

Logical roles

16

P0 foundation roles

7

P1 expansion roles

One additional P2 role is proposed. The implementation roster below is authoritative for rollout grouping.

4. Functional groups and reporting relationships

A. Technology Leadership

Sutra — TEC-001

Owns Samrudhi Agentic OS architecture, platform reliability, technology strategy, infrastructure economics, technical security and deployment governance.

Sutra may propose changes and coordinate approved deployments but cannot independently grant privileged access, bypass assurance controls or approve production releases involving material risk.

B. Platform Architecture & Engineering

Lead: Vinyas — TEC-002

Agent	Primary responsibility
Vinyas	System architecture, platform standards and engineering governance
Sanchay	Storage, retention, backups and data lifecycle
Nirman	Internal developer tools, reusable components and engineering productivity

This group maintains the underlying application and infrastructure architecture.

C. MCP & Systems Integration

Lead: Setubandh — TEC-003

Agent	Primary responsibility
Setubandh	Integration strategy, connector lifecycle and interface standards
Jod	MCP servers, APIs, webhooks and integration configuration
Adhikar	Tool permissions, credentials and access enforcement

This group enables Samrudhi agents to interact with authorised systems such as Google Workspace, CRM, social platforms, analytics and accounting software.

MCP is an integration protocol, not a replacement for application-level authorisation, network security or audit controls.

D. Agent Runtime & Orchestration

Lead: Yantra — TEC-004

Agent	Primary responsibility
Yantra	Agent execution architecture and orchestration policies
Pravahika	Durable workflow execution, state management and retries
Margdarshak	Model selection, routing, latency and cost optimisation

This group provides the execution engine through which agents collaborate.

E. Knowledge & Context Infrastructure

Lead: Smaran — TEC-005

Agent	Primary responsibility
Smaran	Enterprise knowledge architecture and context governance
Sandarbhika	Context retrieval, assembly and relevance controls
Smritikosh	Knowledge storage, versioning, memory lifecycle

This group maintains controlled access to the information agents need to perform their tasks. It must distinguish client-specific knowledge from enterprise-wide knowledge and prevent

unauthorised cross-client retrieval.

F. Security & Reliability

Lead: Suraksha — TEC-006

Agent	Primary responsibility
Suraksha	Security architecture, incident governance and resilience
Chaukidar	Security monitoring, suspicious activity and threat alerts
Upalabdh	Service availability, infrastructure health and recovery readiness
Punarsthapana	Rollback and recovery coordination
Pratikriya	Technology incident tracking and problem resolution

This group protects systems and ensures operational continuity.

G. AgentOps & Digital Workforce Systems

Lead: Niyantrak — TEC-007

Agent	Primary responsibility
Niyantrak	Agent lifecycle, DWMS architecture and AgentOps governance
Pehchaan	Agent identity, registry and lifecycle state
Nirikshak	Agent execution telemetry and observability
Parikshak	Test harnesses, evaluation infrastructure and regression tests
Sanskaran	Version control, release records and deployment coordination
Kshamatra	Capacity measurement and workforce allocation infrastructure

This group provides the technical foundation for every agent's identity, competency, capacity and performance record.

5. Samrudhi Agentic OS — Reference Architecture

Human Board & Authorised Managers
Policy · Budgets · Approvals · Oversight
Executive Agent Layer
Arjun · Daksh · Sutra · Functional Executives
Agent Runtime & Workflow Engine
Task orchestration · State · Retries · Timeouts · Escalations
Agent Registry & DWMS
Identity · Competency · Capacity · Lifecycle
Knowledge & Context
Retrieval · Memory · Client isolation
MCP & Tool Gateway
Authorised APIs · Credentials · Tool policies
Model Routing
Model selection · Limits · Cost optimisation
Business Applications & Data
Google Workspace · CRM · Social · Ads · Finance · Analytics
Cross-Cutting Control Plane
Security · Telemetry · Testing · Audit · Evaluation · Recovery

The architecture must keep three layers distinct:

- Business agents: Decide and produce work within their delegated authority.
- Deterministic services: Execute repeatable operations, maintain state and enforce controls.
- Independent assurance: Evaluate agent outputs, controls and systemic risks without being subordinate to the agent being assessed.

6. Digital Workforce Management System

The DWMS is the central technical system for managing Samrudhi's AI workforce.

A. Digital Agent Master Record

Every agent must have a permanent registry record.

Field	Description
Canonical Agent ID	Permanent unique identifier
Agent name	Human-friendly identity
Department	Organisational assignment
Role designation	Approved function
Reporting manager	Responsible executive or lead
Role document version	Approved role clarity specification

Competency profile	Certified capabilities and limits
Capacity profile	Validated workload and concurrency
Model configuration	Approved model/runtime settings
Tool permissions	Authorised tools and actions
Knowledge access	Approved information boundaries
Workflow assignments	Tasks the agent may perform
Performance scorecard	Quality, efficiency, reliability
Evaluation history	Test and production results
Feedback record	Findings, corrections and improvements
Version history	Prompt, model, tool and workflow changes
Deployment status	Draft, testing, active, restricted, retired
Human owner	Accountable human authority

Canonical identity rule: A single agent may occupy more than one functional position, but must retain one canonical identity. Department position IDs and runtime instance IDs must be maintained separately.

B. Agent lifecycle

01 · Proposed

Role requirement and ownership defined

02 · Registered

Canonical identity and specifications assigned

03 · Configured

Model, tools, context and policies configured

04 · Evaluated

Competency, safety and performance tested

05 · Approved

Human and assurance gates satisfied

06 · Active

Controlled production deployment

07 · Monitored

Continuous telemetry and feedback

08 · Updated or Retired

Versioned improvement, restriction or retirement

7. Technology, MCP & AgentOps Process Master

I recommend 40 standard operating processes.

Process ID	Process	Primary agent
TEC-P01	Technology architecture governance	Vinyas
TEC-P02	New agent role technical assessment	Niyantrak
TEC-P03	Agent identity registration	Pehchaan
TEC-P04	Agent configuration and provisioning	Niyantrak
TEC-P05	Competency test configuration	Parikshak
TEC-P06	Agent deployment approval routing	Sanskaran
TEC-P07	Agent activation and suspension	Pehchaan
TEC-P08	Agent retirement and archive	Pehchaan
TEC-P09	MCP connector onboarding	Jod
TEC-P10	API and integration validation	Setubandh
TEC-P11	Tool permission assignment	Adhikar
TEC-P12	Credential and secret lifecycle coordination	Adhikar

TEC-P13	Workflow definition and registration	Yantra
TEC-P14	Workflow execution and state management	Pravahika
TEC-P15	Retry, timeout and failure handling	Pravahika
TEC-P16	Model routing and fallback	Margdarshak
TEC-P17	Context assembly and retrieval	Sandarbhika
TEC-P18	Knowledge source registration	Smaran
TEC-P19	Knowledge versioning and refresh	Smritikosh
TEC-P20	Client knowledge isolation validation	Suraksha
TEC-P21	Agent execution telemetry capture	Nirikshak
TEC-P22	Agent capacity measurement	Kshamatra
TEC-P23	Agent performance evaluation execution	Parikshak
TEC-P24	Regression test execution	Parikshak

TEC-P38	Change management and approval evidence	Sanskaran
TEC-P39	Technology performance review	Sutra
TEC-P40	Platform improvement roadmap	Sutra

8. Initial role clarity and competencies

Agent	Essential competencies	Key result areas
Sutra	AI architecture, platform strategy, security governance	Reliability, scalability, cost efficiency
Vinyas	Software architecture, distributed systems	Architecture quality, technical debt
Setubandh	APIs, MCP, integration engineering	Connector reliability, integration quality
Yantra	Workflow engines, orchestration patterns	Execution reliability, recoverability
Smaran	Knowledge architecture, retrieval systems	Context quality, isolation
Suraksha	Security architecture, access controls	Security posture, incident response
Niyantrak	Agent lifecycle, DWMS, AgentOps	Registry integrity, deployment governance
Pehchaan	Identity systems, lifecycle management	Identity accuracy, state integrity
Jod	API integration, connector configuration	Integration success, connector defects
Adhikar	IAM, least privilege, secrets	Permission accuracy, access violations
Pravahika	Workflow state, retries, idempotency	Execution success, recovery
Sandarbhika	Retrieval, context	Context relevance,

	assembly	leakage prevention
Smritikosh	Knowledge management, versioning	Knowledge freshness, retrieval accuracy
Margdarshak	Model evaluation, routing, cost optimisation	Routing quality, latency, cost
Nirikshak	Telemetry, logging, observability	Trace completeness, metric accuracy
Parikshak	Testing, evaluation harnesses, regression	Test coverage, defect detection
Sanskaran	CI/CD, versioning, release management	Release success, rollback readiness
Punarsthapana	Recovery, rollback, continuity	Recovery success, restoration time
Chaukidar	Security monitoring, threat detection	Threat detection, alert quality
Upalabdh	SRE, infrastructure monitoring	Availability, incident prevention
Sanchay	Storage, backups, retention	Data durability, recovery readiness
Kshamatra	Capacity modelling, execution telemetry	Capacity accuracy, saturation alerts
Pratikriya	Incident management, root-cause analysis	Incident resolution, recurrence reduction
Nirman	Developer tooling, reusable components	Developer efficiency, component reliability

9. Departmental KRAs & KPIs

A. Technology Department Scorecard

KRA	KPI	Proposed target

Platform availability	Availability during defined service windows	≥99.5% initially
Workflow reliability	Eligible workflow execution success	≥99%
Agent registry integrity	Active agents with complete registry records	100%
Access governance	Unauthorised privileged actions	0
Traceability	Production agent executions with audit traces	100%
Release quality	Production releases passing required gates	100%
Recovery	Critical workflow recovery within defined RTO	100%
Security	Critical security incidents without escalation	0
Cost governance	Unattributed AI execution expenditure	0 material gaps
Evaluation	Active agents with current approved test evidence	100%

These are proposed service objectives, not validated operational results.

B. Agent-specific performance metrics

Agent	Primary KPIs

Sutra	Platform reliability, technology cost, critical incidents
Vinyas	Architecture review quality, performance bottlenecks
Setubandh	Integration success, connector SLA
Yantra	Workflow success, execution latency
Smaran	Context retrieval quality, isolation compliance
Suraksha	Security control effectiveness, incident response
Niyantrak	Registry completeness, lifecycle compliance
Pehchaan	Identity integrity, provisioning accuracy
Jod	Connector acceptance, API failure rate
Adhikar	Permission accuracy, unauthorised access prevention
Pravahika	Retry success, duplicate execution prevention
Sandarbhika	Retrieval relevance, unsupported context rate
Smritikosh	Knowledge freshness, version integrity
Margdarshak	Routing success, cost and latency efficiency
Nirikshak	Telemetry coverage, log

	completeness
Parikshak	Evaluation coverage, regression detection
Sanskaran	Release success, version traceability
Punarsthapana	Rollback success, recovery time
Chaukidar	Threat detection, false-alert rate
Upalabdh	Availability, MTTR, infrastructure incidents
Sanchay	Backup success, restore validation
Kshamatra	Capacity forecast accuracy, overload prevention
Pratikriya	Incident resolution SLA, repeat incident rate
Nirman	Tool adoption, development cycle improvement

10. AgentOps performance and feedback architecture

Each agent execution should generate a structured event.

Minimum execution record

Field	**Purpose**
Execution ID	Unique run reference
Agent ID	Canonical identity
Agent version	Exact deployed configuration
Client/tenant ID	Data isolation and attribution
Workflow ID	Parent business process
Task ID	Assigned work
Start/end timestamps	Latency and duration
Model and tools used	Execution configuration

Input/output references	Reproducibility and traceability
Token and tool usage	Cost accounting
Evaluation results	Quality and compliance
Human feedback	Review outcomes
Failure classification	Root-cause analysis
Approval record	Authorisation evidence
Final status	Accepted, rejected, failed or escalated

Sensitive inputs and outputs should be stored as protected references or appropriately minimised records rather than indiscriminately copied into logs.

Feedback loop

Execution

Agent completes or attempts an assigned task

Telemetry

Latency, usage, outcome and failure evidence recorded

Evaluation

Automated and human quality assessment

Feedback

Structured findings and corrective-action requirements

Controlled Improvement

Versioned prompt, model, workflow or tool changes

Regression Testing

Verify improvements and detect new failures

Approved Deployment

Release or rollback with full traceability

11. Technology authority and security controls

Activity	Agent authority	Human approval
Register draft agent	Permitted	Review before activation
Configure approved tools	Within predefined limits	New privileged tools
Grant production credentials	Not independently permitted	Required
Execute approved	Permitted within	Sensitive external

workflows	policy	actions
Change model routing	Within approved tested policy	Material risk changes
Deploy new agent version	Prepare and test	Production release approval
Suspend unsafe workflow	Permitted under emergency rules	Immediate notification
Access client data	Only authorised tenant scope	New scope approval
Modify security policies	Recommend only	Required
Delete production data	Not independently permitted	Required
Execute rollback	Within approved emergency runbook	Escalation and post-review
Restore from backup	Prepare and verify	Authorised recovery approval

Security controls must be enforced at the system level. An agent's instruction prompt is not a sufficient security boundary.

12. Technology & AgentOps Command Centre

Sutra — Technology Operations Dashboard

Proposed dashboard architecture; no live platform telemetry connected

Digital Workforce

Registered · Active · Restricted · Retired

Workflow Execution

Running · Completed · Failed · Retried

MCP & Integrations

Connected · Degraded · Failed

Security & Permissions

Access · Incidents · Policy violations

Platform Reliability

Availability · Latency · Error rates

AI Execution Economics

Tokens · Tool costs · Cost per task

Versions & Releases
Testing · Approved · Deployed · Rolled back
Agent Performance
Quality · Capacity · Reliability · Feedback

13. Interdepartmental accountability

Department	Technology responsibility	Partner responsibility
CEO Office	Provide secure executive orchestration and access	Define strategic requirements and authority
Sales	Maintain CRM and outreach integrations	Own sales workflows and business rules
Samrudhi Marketing	Provide publishing, website and analytics tools	Own marketing execution
Client Experience	Maintain client knowledge and approval infrastructure	Own client data requirements and communication
Operations	Provide workflow engine, task state and capacity systems	Own scheduling and delivery priorities
Creative & Content	Provide content tools, knowledge and publishing integrations	Own creative outputs and quality
Paid Media & SEO	Maintain campaign and tracking integrations	Own campaign execution and optimisation
Analytics	Provide reliable data	Own metric definitions

	access and telemetry	and intelligence
Finance	Provide usage and infrastructure cost data	Own financial controls and costing
Assurance	Provide immutable evidence and evaluation infrastructure	Independently govern compliance and certification

14. Capacity engineering for Technology & AgentOps

Technology capacity must account for both agent work and deterministic infrastructure load.

Capability	Capacity unit
Agent registry	Active registered agents
Workflow orchestration	Executions per period and peak concurrency
MCP integration	Active connectors and tool calls
Model routing	Inference requests and token volume
Context retrieval	Retrieval requests and indexed knowledge volume
Evaluation	Test cases and production samples
Telemetry	Execution events ingested and retained
Security	Monitored identities, events and incidents
Storage	Data volume, retention and retrieval operations
Recovery	Recovery tests and validated restoration objectives

Capacity should be evaluated under realistic concurrency, failure, latency and cost conditions

rather than ideal single-task benchmarks.

15. Implementation priorities

Release 0 — Minimum Secure Agentic Platform

P0

Sutra

Vinyas

Setubandh

Yantra

Smaran

Suraksha

Niyantrak

Pehchaan

Jod

Adhikar

Pravahika

Sandarbhika

Nirikshak

Parikshak

Sanskaran

Chaukidar

Build identity, tool access, durable workflows, context isolation, testing, telemetry, security and controlled deployment for the first content-production pilot.

Release 1 — Operational Resilience & Scale

P1

Smritikosh

Margdarshak

Punarsthapana

Upalabdh

Sanchay

Kshamatra

Pratikriya

Expand knowledge lifecycle, routing, recovery, reliability, capacity and incident management.

Release 2 — Developer Productivity

P2

Nirman — TEC-024

Develop reusable engineering components, developer tooling and advanced automation after core infrastructure is stable.

Practical deployment principle: The P0 capabilities must exist, but they do not require sixteen independent autonomous agents. A small engineering team can initially implement them using existing infrastructure, deterministic services and a limited number of AI assistants.

SAMRUDHI AGENTIC AI

Document 01A.11 | Digital Workforce Master Organisation Register

Department 11 — Independent Assurance, Compliance & Agent Performance

Department code: GOV Executive head: Satya — AI Chief Assurance Agent Functional reporting: Human Board / Founder / Designated Governance Committee Administrative coordination: Arjun — AI CEO Human accountability: Designated Independent Assurance & Compliance Owner Deployment priority: P0 — Foundational governance controls Status: Proposed organisational structure

1. Department mandate

Establish an independent assurance function that ensures every human-supervised AI agent, automated workflow and business operation within Samrudhi functions competently, safely, reliably, ethically and within approved authority.

This department is the institutional safeguard of Samrudhi Agentic OS.

Its purpose is not merely to identify errors after they occur. It must establish a continuous system of competency certification, performance evaluation, compliance monitoring, incident investigation, corrective action and independent reporting.

The department must answer five fundamental questions:

- Is every agent competent to perform its assigned responsibilities?
- Is every agent operating within its approved authority, capacity and access permissions?
- Are its outputs accurate, compliant, reliable and fit for purpose?
- Are failures detected, escalated, corrected and prevented from recurring?
- Can management independently verify the performance and integrity of the digital workforce?

Core principle: No agent should independently certify its own competence, approve its own critical output, or determine that its own control failure has been satisfactorily resolved.

2. Governance and reporting architecture

The Assurance Department must remain structurally independent of the business departments it evaluates.

Human Board / Founder

Final governance authority · Risk appetite · Critical decisions

Designated Human Assurance Owner

Independent review · Approval · Escalation

Satya

AI Chief Assurance Agent

GOV-001 · Independent Assurance Leadership

Pramana

Agent Competency & Certification

Nishtha

Performance & Quality Assurance

Maryada

Compliance & Risk Assurance

Vivek

Audit & Control Evaluation
Samyak
Incident, CAPA & Improvement Assurance
Independent Evaluation & Assurance Specialists
Certification · Audits · Compliance · Investigations · CAPA · Performance Reviews

Independence requirements

- Satya must have direct escalation access to the human governance authority.
- Arjun and functional executives may receive findings and coordinate corrective actions but cannot suppress critical assurance reports.
- Technology operates the evaluation infrastructure; Assurance controls independent evaluation criteria and certification decisions.
- Departments own remediation; Assurance verifies its effectiveness.
- Material agent suspension, reinstatement and exceptions require human-governed decision rules.
- Where an independent human assurance function does not yet exist, the founder must explicitly retain that responsibility rather than treating an AI agent as independent by itself.

3. Departmental Agent Master Register

I propose 20 named logical agent roles: one executive, five functional leads and fourteen specialists.

Agent ID	Identity	Designation	Priority
GOV-001	Satya	AI Chief Assurance Agent	P0
GOV-002	Pramana	Agent Competency & Certification Lead	P0
GOV-003	Nishtha	Agent Performance & Quality Assurance Lead	P0
GOV-004	Maryada	Compliance, Privacy & Risk Assurance Lead	P0
GOV-005	Vivek	Internal Audit & Control	P1

		Evaluation Lead	
GOV-006	Samyak	Incident, CAPA & Improvement Assurance Lead	P1
GOV-007	Yogyata	Agent Competency Assessment Agent	P0
GOV-008	Pramanik	Agent Certification & Recertification Agent	P0
GOV-009	Gunvatta	Output Quality Evaluation Agent	P0
GOV-010	Nishpaksh	Independent Performance Scoring Agent	P0
GOV-011	Seema	Agent Authority & Permission Audit Agent	P0
GOV-012	Swasthya	Healthcare Content & Advertising Compliance Agent	P0
GOV-013	Gopniya	Data Privacy & Confidentiality Assurance Agent	P0

GOV-014	Lekhapari	Financial & Operational Control Audit Agent	P1
GOV-015	Sakshi	Audit Evidence & Traceability Review Agent	P0
GOV-016	Vicharana	Incident Investigation & Root Cause Agent	P1
GOV-017	Nivaran	CAPA Verification & Effectiveness Agent	P1
GOV-018	Sankat	Critical Risk & Escalation Monitoring Agent	P0
GOV-019	Punariksha	Agent Performance Appeal & Reassessment Agent	P2
GOV-020	Suchita	Governance Reporting & Assurance MIS Agent	P1

P0 = foundational assurance control; P1 = operational expansion; P2 = advanced governance capability. Logical roles may be implemented using shared evaluators, deterministic rules and human review.

20
Proposed roles
12
P0 roles
7
P1 roles
One P2 role is proposed.

4. Functional groups and accountability

A. Independent Assurance Leadership

Satya — GOV-001
Owns the independent assurance framework, digital workforce certification governance, risk reporting, control evaluation standards and escalation of critical findings.
Satya is accountable for ensuring that assurance results are evidence-based and not influenced by the business agents being evaluated.

B. Agent Competency & Certification

Lead: Pramana — GOV-002

Agent	Primary responsibility
Pramana	Competency standards, certification policies and reassessment criteria
Yogyata	Competency tests, scenario assessments and capability verification
Pramanik	Certification status, recertification schedules and evidence

This group determines whether an agent is qualified for a defined scope of work.
Certification must be task-specific. Passing a copywriting test does not authorise an agent to provide medical advice or approve financial transactions.

C. Performance & Quality Assurance

Lead: Nishtha — GOV-003

Agent	Primary responsibility
Nishtha	Independent performance evaluation methodology
Gunvatta	Output accuracy, completeness and quality assessment

Nishpaksh	Role-specific performance scoring and benchmarking
Punariksha	Performance appeals, reassessment and disputed findings

This group evaluates performance independently of operational management.

D. Compliance, Privacy & Risk Assurance

Lead: Maryada — GOV-004

Agent	Primary responsibility
Maryada	Compliance assurance, risk taxonomy and policy oversight
Seema	Authority, permission and access-control reviews
Swasthya	Healthcare marketing, medical claims and advertising compliance checks
Gopniya	Confidentiality, privacy and client-data isolation assurance
Sankat	Critical risk detection and escalation

This group evaluates whether Samrudhi's agents operate within applicable policies, contractual obligations and regulatory requirements.

It does not replace qualified legal, privacy, clinical or regulatory professionals.

E. Internal Audit & Control Evaluation

Lead: Vivek — GOV-005

Agent	Primary responsibility
Vivek	Risk-based audits and internal control effectiveness
Lekhapari	Financial and operational control testing
Sakshi	Audit evidence completeness,

	integrity and traceability

This group independently tests whether controls are functioning as designed.

F. Incident, CAPA & Improvement Assurance

Lead: Samyak — GOV-006

Agent	Primary responsibility
Samyak	Incident assurance, corrective-action governance
Vicharana	Incident investigation and root-cause assessment
Nivaran	CAPA verification, retesting and recurrence monitoring
Suchita	Assurance dashboards, findings and governance reporting

This group verifies that improvements actually prevent repeat failures rather than merely closing action items.

5. Independent assurance operating model

The Assurance Department will operate across five interconnected control layers.

01 · Pre-deployment Assurance

Role validation · Competency testing · Risk assessment · Certification

02 · Execution Assurance

Policy checks · Output evaluation · Authority controls · Critical alerts

03 · Performance Assurance

Quality scoring · Reliability · Capacity · Efficiency · Business contribution

04 · Incident & Control Assurance

Investigation · Root cause · Corrective actions · Audit findings

05 · Recertification & Improvement

Regression testing · Competency updates · Controlled reinstatement

The assurance framework must be applied throughout the agent lifecycle, not only during periodic audits.

6. Agent competency certification framework

The previously agreed competency scale will be retained.

Level	Classification	Certification interpretation
C0	Unverified	No production authority

C1	Foundation	Can perform supervised, low-risk tasks
C2	Operational	Can perform approved routine tasks
C3	Advanced	Handles complex tasks within defined limits
C4	Expert	Demonstrates high reliability in specialised work
C5	Orchestrator	Coordinates multi-agent processes within delegated authority

Important: C5 represents orchestration capability, not unrestricted autonomy. A C5 agent may still require human approval for sensitive actions.

Certification dimensions

Every agent will be assessed across:

- Functional knowledge and task competence.
- Output quality and accuracy.
- Tool usage and workflow execution.
- Policy and authority compliance.
- Exception recognition and escalation.
- Reliability under realistic operating conditions.
- Capacity under validated concurrency and workload.
- Feedback responsiveness and regression stability.

Certification record

Each certification should contain the agent ID, role version, tested capabilities, evaluation dataset version, evaluator identity, scores, failure conditions, approved authority, certification date, expiry or review trigger and supporting evidence.

Certification must be invalidated or reviewed when material changes occur to the agent's role, model, prompts, tools, permissions or operating environment.

7. Agent performance management framework

Performance management must be consistent across the organisation while retaining role-specific metrics.

A. Standard evaluation dimensions

Dimension	Default weight	Evaluation focus
Quality	30%	Accuracy, completeness, usefulness
Efficiency	25%	Cost, speed, resource consumption
Reliability	20%	SLA, execution stability, recovery
Business contribution	15%	Accepted outputs and attributable outcomes
Feedback & adaptability	10%	Improvement, correction, regression avoidance
Total	100%	

Weights may be adjusted for individual roles. For safety-critical or compliance-sensitive roles, minimum thresholds and hard-stop controls take precedence over weighted scores.

B. Proposed performance classifications

Score	Classification	Management response
90–100	Exceptional	Maintain scope; consider controlled expansion
80–89	Strong	Continue with routine monitoring
70–79	Meets expectations	Continue; targeted improvement
60–69	Improvement required	Corrective plan and closer supervision
Below 60	Unsatisfactory	Restrict scope

pending reassessment

These bands are proposed policy settings. They must be validated against actual evaluator consistency and business outcomes.

A critical privacy, financial, safety or authorisation violation can trigger restriction regardless of score.

Interactive performance scorecard

Illustrative Agent Evaluation

Adjust scores to see the proposed evaluation logic. This is not a live agent appraisal.

Quality · 30%

92

Efficiency · 25%

84

Reliability · 20%

96

Business contribution · 15%

85

Feedback & adaptability · 10%

90

Critical control violation detected

Weighted performance score

89.5%

Effective assessment

Strong

Critical violations override the aggregate score. Final certification and restrictions require the approved governance process.

8. Independent Assurance Process Master

I recommend 38 standard operating processes.

Process ID	Process	Primary agent
GOV-P01	Agent role assurance review	Pramana
GOV-P02	Competency standard definition	Pramana
GOV-P03	Competency evaluation design	Yogyata
GOV-P04	Pre-deployment competency testing	Yogyata

GOV-P05	Certification evidence review	Pramanik
GOV-P06	Agent certification recommendation	Pramanik
GOV-P07	Recertification scheduling	Pramanik
GOV-P08	Material-change reassessment	Pramana
GOV-P09	Output quality evaluation	Gunvatta
GOV-P10	Role-specific KPI evaluation	Nishpaksh
GOV-P11	Agent performance scoring	Nishpaksh
GOV-P12	Performance exception escalation	Nishtha
GOV-P13	Performance appeal review	Punariksha
GOV-P14	Authority and delegation audit	Seema
GOV-P15	Tool and access permission audit	Seema
GOV-P16	Healthcare content compliance review	Swasthya
GOV-P17	Advertising and promotional claim assurance	Swasthya
GOV-P18	Privacy and confidentiality assessment	Gopniya

GOV-P19	Client data isolation assurance	Gopniya
GOV-P20	Critical risk detection	Sankat
GOV-P21	Critical incident escalation	Sankat
GOV-P22	Risk-based audit planning	Vivek
GOV-P23	Operational control audit	Lekhapari
GOV-P24	Financial control audit	Lekhapari
GOV-P25	Audit evidence validation	Sakshi
GOV-P26	Audit finding classification	Vivek
GOV-P27	Incident investigation	Vicharana
GOV-P28	Root-cause analysis	Vicharana
GOV-P29	Corrective-action review	Samyak
GOV-P30	CAPA implementation verification	Nivaran
GOV-P31	CAPA effectiveness testing	Nivaran
GOV-P32	Repeat failure and regression monitoring	Nivaran
GOV-P33	Agent restriction recommendation	Satya
GOV-P34	Agent reinstatement assurance	Pramana
GOV-P35	Weekly assurance	Nishtha

	exception review	
GOV-P36	Monthly agent performance assurance	Suchita
GOV-P37	Quarterly governance and risk reporting	Satya
GOV-P38	Assurance framework improvement	Satya

9. Initial role clarity and competencies

Agent	**Essential competencies**	**Key result areas**
Satya	Governance, assurance, risk oversight, independent judgement	Control effectiveness, critical risk escalation
Pramana	Competency architecture, certification standards	Certification validity, competency coverage
Nishtha	Performance evaluation, quality systems	Evaluation accuracy, performance integrity
Maryada	Compliance, privacy, risk management	Compliance coverage, risk detection
Vivek	Internal audit, control testing	Audit effectiveness, control assurance
Samyak	Incident management, CAPA governance	Corrective-action effectiveness
Yogyata	Test design, scenario evaluation	Competency assessment validity

Pramanik	Certification evidence, lifecycle governance	Certification completeness
Gunvatta	Output evaluation, quality measurement	Defect detection, evaluation precision
Nishpaksh	Performance scoring, benchmarking	Scoring consistency, reproducibility
Seema	Access controls, authority matrices	Permission audit accuracy
Swasthya	Healthcare marketing compliance, claim screening	High-risk claim detection
Gopniya	Privacy, confidentiality, data governance	Privacy assurance, isolation testing
Lekhapari	Financial and operational auditing	Control defect detection
Sakshi	Evidence verification, audit traceability	Evidence integrity, completeness
Vicharana	Investigation, causal analysis	Root-cause quality
Nivaran	CAPA validation, regression testing	Recurrence prevention
Sankat	Risk monitoring, escalation	Critical alert timeliness
Punariksha	Independent reassessment, appeals	Fairness, reassessment consistency
Suchita	Governance reporting, assurance MIS	Reporting accuracy, timeliness

10. Departmental KRAs & KPIs

A. Independent Assurance Scorecard

KRA	KPI	Proposed target
Certification governance	Production agents with valid certification	100%
Evaluation coverage	Critical workflows with approved assurance controls	100%
Performance integrity	Evaluations with reproducible evidence	100%
Compliance	Critical violations identified and escalated	100% of detected cases
Access assurance	Material unauthorised privileges unresolved	0
Incident management	Critical incidents escalated within SLA	100%
CAPA	Corrective actions verified before closure	100%
Audit	High-risk audit findings tracked to resolution	100%
Independence	Suppressed or improperly altered critical findings	0
Governance reporting	Reports delivered within agreed SLA	100%

Detection effectiveness must also be tested with known-failure samples. A target of 100% escalation of detected cases does not imply all real-world incidents will be detected.

B. Agent-specific KPIs

Agent	Primary KPIs

Satya	Critical risk reporting, independence breaches, assurance coverage
Pramana	Certification validity, standard coverage, recertification timeliness
Nishtha	Evaluation consistency, unresolved performance exceptions
Maryada	Compliance test coverage, critical risk detection
Vivek	Audit plan completion, finding accuracy
Samyak	CAPA verification timeliness, repeat failures
Yogyata	Test validity, defect detection, evaluation reproducibility
Pramanik	Certification record accuracy, expired certifications
Gunvatta	Quality defect recall, false positives
Nishpaksh	Scoring consistency, evidence completeness
Seema	Privilege drift detection, access review completeness
Swasthya	Clinical-claim risk detection, compliance false negatives
Gopniya	Privacy control test coverage, leakage detection

Lekhapari	Control testing accuracy, audit evidence completeness
Sakshi	Evidence integrity, retrieval success
Vicharana	Root-cause acceptance, investigation timeliness
Nivaran	CAPA effectiveness, recurrence rate
Sankat	Critical alert latency, missed escalation tests
Punariksha	Reassessment timeliness, overturned decisions
Suchita	Governance MIS accuracy, reporting timeliness

11. Agent incident severity framework

Severity	Definition	Required response
S1 — Critical	Actual or credible risk of serious harm, sensitive data exposure, unauthorised financial action or major control compromise	Contain immediately, suspend affected capability where necessary, notify human authority
S2 — High	Significant quality, compliance, financial or operational failure	Escalate urgently, restrict affected workflow as needed
S3 — Moderate	Repeated or material non-critical performance deviation	Corrective-action plan and enhanced monitoring
S4 — Low	Minor isolated defect	Record, correct and

	without material impact	include in routine review

Incident assurance workflow

Detection

Monitoring, human report, audit or evaluator finding

Classification

Severity, impact, scope and urgency

Containment

Restrict unsafe activity and preserve evidence

Investigation

Timeline, causal factors and control failures

Corrective Action

Assigned remediation owner and due date

Independent Verification

Retesting and evidence review

Closure or Escalation

Human-governed closure, monitoring or further restriction

The operational department is responsible for fixing its failure. Assurance verifies the correction and determines whether the evidence supports closure.

12. Independent Assurance Command Centre

Satya — Governance & Agent Assurance Dashboard

Proposed dashboard architecture; no live assurance data connected

Agent Certification

Certified · Due · Expired · Restricted

Performance Assurance

Quality · Reliability · Efficiency · Trends

Compliance

Privacy · Healthcare claims · Authority

Critical Risks

Open incidents · Severity · Escalation

Audit & Controls

Audit plans · Findings · Evidence

CAPA Effectiveness

Open · Verified · Repeat failures

Evaluation Integrity

Consistency · Disputes · Reassessments

Governance Reporting

Board reports · Exceptions · Decisions

13. Authority and escalation matrix

Decision	Assurance role	Final authority

Define competency standards	Propose and validate	Human governance owner
Certify low-risk agent scope	Recommend; automated issuance only if delegated	Approved governance policy
Certify high-risk agent scope	Independently assess	Authorised human
Flag poor performance	Evaluate and report	Functional owner for remediation
Suspend unsafe workflow	Trigger predefined emergency containment	Human review and confirmation
Approve material policy exception	Recommend only	Human governance authority
Close critical incident	Verify corrective evidence	Authorised human
Reinstate restricted agent	Reassess and recommend	Authorised human
Report critical governance risk	Direct escalation	Human Board / Founder
Change evaluation standards	Propose and test	Human governance authority

The assurance function must have the authority to initiate emergency containment under approved rules, without allowing an AI agent to make unrestricted or irreversible governance decisions.

14. Interdepartmental accountability

Department	**Assurance responsibility**	**Department responsibility**
CEO Office	Independently review executive agent performance and	Set strategy and respond to findings

	governance	
Sales	Audit outreach, commercial controls and sales agent competence	Correct sales processes
Samrudhi Marketing	Evaluate brand claims, lead-generation compliance and agent quality	Maintain compliant marketing operations
Client Experience	Review communication quality, approvals and confidentiality	Own client relationship corrections
Operations	Audit delivery controls, SLA evidence and exception handling	Implement operational CAPA
Creative & Content	Independently evaluate content quality and healthcare claims	Correct production processes
Paid Media & SEO	Audit campaign permissions, spend controls and advertising compliance	Correct campaign operations
Analytics	Verify metric integrity and reporting reliability	Maintain data quality and reporting
Finance	Audit financial	Maintain accurate

	controls, authorisation and reconciliation	financial operations
Technology	Audit security, agent lifecycle and system controls	Operate infrastructure and remediate defects

15. Assurance capacity engineering

Assurance capacity should be based on risk-weighted evaluation workload, not simply the number of agents.

Workload category	Capacity unit
Agent certification	Competency evaluations per role/ version
Output quality assurance	Risk-weighted output samples
Performance assurance	Agent scorecards reviewed
Compliance assurance	Policies, workflows and claims evaluated
Access auditing	Identities and permissions reviewed
Operational auditing	Controls and transactions tested
Incident investigation	Cases by severity and complexity
CAPA validation	Corrective actions and retests
Governance reporting	Validated reports and review cycles

Risk-based evaluation frequency

Risk tier	Typical examples	Evaluation approach
Critical	Financial authorisation, privacy-sensitive actions, clinical-risk content	Continuous deterministic controls, targeted independent review
High	External publishing, advertising spend, client commitments	Pre-release gates and frequent sampling

	client commitments	
Moderate	Internal reporting, workflow coordination	Automated validation and periodic sampling
Low	Internal drafts and non-sensitive administrative work	Routine automated checks and risk-based sampling

This model avoids applying the same review burden to every task while preserving stronger controls for higher-risk activities.

16. Implementation priorities

Release 0 — Minimum Independent Assurance

P0

Satya
Pramana
Nishtha
Maryada
Yogyata
Pramanik
Gunvatta
Nishpaksh
Seema
Swasthya
Gopniya
Sakshi
Sankat

Establish certification, independent quality evaluation, healthcare compliance, privacy checks, authority controls and critical escalation for the initial content-production pilot.

Release 1 — Audit & Corrective-Action Assurance

P1

Vivek
Samyak
Lekhapari
Vicharana
Nivaran
Suchita

Expand independent auditing, incident investigations, CAPA verification and governance reporting.

Release 2 — Formal Performance Appeals

P2

Punariksha — GOV-019

Establish formal reassessment and appeals procedures as the digital workforce and management hierarchy expand.

Priority reconciliation: The detailed register contains 13 P0, 6 P1 and 1 P2 roles. These counts supersede the preliminary summary.

17. Consolidated Samrudhi Agentic Organisation

All eleven departments have now been mapped at the organisational level.

No.	Department	Logical roles	Status
01	CEO Office & Enterprise Strategy	6	Drafted
02	Sales & Business Development	13	Drafted
03	Samrudhi Brand & Marketing	16	Drafted
04	Client Experience & Account Management	16	Drafted
05	Operations & Delivery Management	18	Drafted
06	Creative, Content & Social Media	22	Drafted
07	Paid Media, SEO & Growth Marketing	20	Drafted
08	Analytics, Intelligence & Reporting	19	Drafted

09	Finance & Administration	20	Drafted
10	Technology, MCP & AgentOps	24	Drafted
11	Independent Assurance, Compliance & Agent Performance	20	Drafted
Total	11 departments	194	Organisational mapping complete

The 194 figure represents proposed departmental positions, not necessarily 194 distinct canonical agents or deployed AI model instances. Identity reconciliation and role consolidation remain necessary.

Organisation Architecture — Completion

11/11

Departments mapped

194

Logical positions

Core systems: OS + DWMS

18. Recommended next stage — Master Organisation Consolidation

Before developing individual agent role documents, I recommend creating Document 01B — Samrudhi Agentic Organisation Master Architecture & Digital Workforce Registry.

This document should resolve the organisational design into one authoritative operating model, covering:

- Final organisation chart: Human governance, AI executives, department leads, specialists and independent assurance.
- Canonical agent registry: Unique permanent IDs, names, reporting lines and cross-functional assignments.
- Role consolidation: Identify shared capabilities and remove unnecessary duplication across 194 proposed positions.
- Human–AI accountability matrix: Define who recommends, executes, reviews, approves and remains legally accountable.
- Department interaction architecture: Map every major workflow handoff and dependency.

- Digital Workforce Management System: Define registry records, competency profiles, capacity, evaluation and lifecycle management.
- Deployment architecture: Distinguish logical agents, orchestrated workflows, deterministic services and human responsibilities.
- Pilot-to-scale roadmap: Prioritise the minimum viable organisation for 2–3 healthcare content and social media clients.
- Enterprise scorecard: Define management KPIs, operational KPIs and agent performance measures.
- Role documentation sequence: Establish the order for producing the complete individual agent role-clarity, competency, capacity and performance documents.

Recommended sequence: Finalise the consolidated master architecture first, then begin the detailed role documents with Arjun — AI CEO (CEO-001), followed by the remaining executive agents, functional leads and specialist agents.

This will prevent the organisation from becoming an unnecessarily complex collection of agents and ensure that Samrudhi develops into a coherent, measurable and economically sustainable digital enterprise.

SAMRUDHI AGENTIC AI

Document 01B | Enterprise Organisation Architecture & Digital Workforce Master Registry

From 194 proposed roles to one accountable digital organisation

Organisation: Samrudhi Healthcare Digital Parent: Nushift Technologies Pvt Ltd Operating model: AI-operated, human-governed Core infrastructure: Samrudhi Agentic OS + Digital Workforce Management System (DWMS) Document status: Consolidated architecture — Version 1.0, proposed for approval

1. Executive architecture

We have completed the first-stage mapping of all eleven departments, comprising 194 proposed logical positions.

The next objective is not to activate 194 agents. It is to establish a coherent enterprise in which each role has a clear purpose, measurable accountability, defined authority and an economically sustainable deployment model.

The master architecture will separate four concepts that should never be confused:

Concept	Definition	Example
Organisational position	A defined accountability within Samrudhi	Healthcare Copywriting Agent
Canonical agent identity	Permanent identity for a digital worker	Lekha
Runtime deployment	Actual technical implementation executing work	A configured model and workflow

	executing work	
Human accountability	Person authorised to approve, supervise or intervene	Client Account Manager

A single runtime may support multiple low-risk specialist positions. Conversely, one organisational position may require several tools, deterministic services and human approvals. The operating principle is one accountable role, one authoritative record, explicit authority and independently verifiable performance—not one model instance per job title.

2. Enterprise design principles

The consolidated organisation will follow these rules:

- Human governance is supreme. Financial commitments, sensitive publication, privileged access and material organisational changes remain human-controlled.
- Every agent has a permanent identity. Names, position assignments, versions and runtime instances are separately recorded.
- Every workflow has one accountable business owner. Multiple agents may contribute, but ownership must remain unambiguous.
- Independent assurance is structurally protected. The function that produces work cannot exclusively certify that work.
- Client information is isolated. One client's confidential data must not be available to another client's workflows.
- Agent capacity must be demonstrated. Workload claims require successful benchmark results.
- Performance is evidence-based. Evaluations use validated outputs, cost, latency, reliability and feedback.
- Improvement is controlled. Changes are versioned, tested and approved before production deployment.
- Deterministic processes remain deterministic. Calculation, access enforcement, transaction execution and logging should not depend on discretionary language-model reasoning.
- Scale follows proven economics. New roles and deployments must justify their contribution to service quality, throughput or profitability.

3. Final enterprise governance structure

Human Board / Founder

Strategy · Capital · Risk appetite · Reserved approvals

Arjun — AI CEO

Enterprise strategy · Coordination · Performance

Agentic OS + DWMS
Satya — Independent Assurance
Reports functionally to Human Board, not Arjun

Executive accountability register

Canonical ID	Executive	Primary accountability
SAM-EX-001	Arjun	Enterprise direction and executive coordination
SAM-EX-002	Daksh	Delivery, productivity and operational performance
SAM-EX-003	Aarya	Creative strategy, content and social delivery
SAM-EX-004	Mitra	Client experience, retention and communication

SAM-EX-005	Vikram	Revenue growth, sales and Samrudhi marketing
SAM-EX-006	Niti	Finance, profitability and financial controls
SAM-EX-007	Sutra	Technology architecture, integrations and AgentOps
SAM-EX-008	Tejas	Paid media, SEO and client growth performance
SAM-EX-009	Medha	Enterprise intelligence and trusted reporting
SAM-EV-001	Satya	Independent evaluation, certification and assurance

This preserves the previously assigned executive identities while adding Tejas and Medha. Satya retains a separate assurance identity namespace.

Important distinction: Tejas and Medha are proposed new executive appointments. Their canonical IDs are provisional until the registry is formally approved.

4. Consolidated department register

Code	Department	Head	Positions	Account-ability
CEO	CEO Office & Strategy	Arjun	6	Enterprise
SAL	Sales & Business Develop-ment	Vikram Commercial		

MKT	Samrudhi Brand & Marketing	Vikram / Prerna	16	Commercial
CEX	Client Experience & Accounts	Mitra	16	Client
OPS	Operations & Delivery	Daksh	18	Operational
CRT	Creative, Content & Social	Aarya	22	Production
PMG	Paid Media, SEO & Growth	Tejas	20	Perfor-mance
DAT	Analytics & Intelligence	Medha	19	Data
FIN	Finance & Administra-tion	Rohini	20	Financial
TEC	Technology, MCP & AgentOps	Sutra	24	Technical
GOV	Independent Assurance	Satya	20	Independent
Total	11 departments		194	

194 is the sum of registered department positions. It does not represent a validated count of distinct identities, active agents or technical deployments.

5. Registry reconciliation

The first organisational drafts establish a strong functional inventory, but some names, authority descriptions and cross-functional roles require standardisation.

A. Decisions to lock

Issue	Consolidated rule
Vikram leads SAL and oversees MKT	One canonical identity; MKT leadership is a secondary assignment
CEO-003 Lakshya vs PMG lead	PMG lead remains Lakshman
CRT Drishti vs DAT BI lead	DAT lead remains Darshan
CEX Smriti vs TEC knowledge lead	TEC lead remains Smaran
Similar role names across departments	Names may be similar, but IDs and accountabilities must be unique
Manak and Kushal in DAT	Treat as DAT identities unless a previously approved canonical record establishes otherwise
Department IDs vs agent IDs	Position IDs such as DAT-001 are not canonical agent IDs
Assurance certification	Independent evidence and human-governed final authority
Agent suspension	Preapproved emergency containment, with human review
Business performance	Operational owner is accountable; DAT measures; GOV independently evaluates

B. Identity uniqueness rules

A canonical registry must reject:

- Duplicate canonical IDs.
- Two active identities with the same approved name and indistinguishable purpose.
- Agents with no accountable human owner.
- Production agents without approved competency and authority records.
- Agents whose assigned tools exceed their authorised role.
- Multiple owners claiming final accountability for the same workflow.

For now, the 194 positions remain the baseline planning inventory. The definitive number of unique identities will be calculated after matching all positions against the canonical registry; it should not be guessed from names alone.

6. Role consolidation strategy

The largest efficiency opportunity is not eliminating necessary accountability. It is consolidating duplicated execution capabilities while preserving role clarity.

Shared capability	Departments served	Proposed technical approach
Research and retrieval	SAL, MKT, CRT, PMG	Shared research service with scoped context
Content drafting	MKT, CRT, PMG	Shared model service, distinct role configurations
Scheduling	CEX, OPS, CRT	Central workflow and calendar services
Reporting	All departments	Shared DAT metrics and reporting services
Quality checking	CRT, PMG, GOV	Operational QA plus separate assurance evaluation
Knowledge retrieval	All departments	Central TEC retrieval infrastructure with tenant isolation
Notifications	SAL, CEX, OPS, FIN	Shared messaging service with role-specific approval
Cost monitoring	OPS, DAT, FIN, TEC	Shared telemetry; separate economic ownership
Agent evaluation	All departments	TEC test infrastructure; GOV assurance standards

Capacity management	OPS, DAT, TEC	Shared execution data; OPS owns allocation
Workflow improvement	OPS, TEC, GOV	OPS proposes; TEC implements; GOV verifies

This prevents Samrudhi from creating multiple incompatible systems for the same underlying capability.

Consolidation decisions

Consolidate technical services, such as reporting generation, scheduling, retrieval, notification delivery and logging.

Preserve separate accountable roles where business authority differs. For example, the agent preparing an invoice and the agent independently validating its approval must not be collapsed into an unchecked end-to-end actor.

Preserve independent assurance, even if evaluators use the same underlying model provider or infrastructure.

7. Human–AI accountability framework

A fundamental distinction is required between the role that performs a task and the person who remains accountable for the consequences.

Activity	**AI prepares**	**AI executes**	**Human approval**
Content research	Yes	Yes	For sensitive sources or claims
Routine content drafts	Yes	Yes	Before client-facing release initially
Healthcare promotional claims	Yes	Draft only	Clinical/ compliance review as required
Client communications	Yes	Within approved rules	Sensitive or contractual

			messages
Social publishing	Yes	After approved release gate	Required initially
Campaign optimisation	Yes	Within delegated limits	Spend/scope exceptions
Client proposals	Yes	Draft only	Pricing and commercial approval
Invoicing	Yes	Draft/validate	Issue approval initially
Payments	Yes	Preparation only	Human execution
Agent configuration changes	Yes	Staging/testing	Production approval
Agent performance assessment	Yes	Evaluate and recommend	Material restrictions/ certification
Strategic decisions	Yes	Analysis and recommenda- tions	Human Board

Proposed human governance structure for the pilot

Samrudhi does not need a large human management team to begin. It needs clearly assigned accountability for four functions:

- Executive sponsor: Founder or designated business head.
- Client and editorial approver: Responsible for briefs, client commitments and content release.
- Technical operator: Responsible for integrations, credentials, deployments and incident response.
- Independent quality/compliance reviewer: Responsible for reviewing high-risk content and assurance findings.

One person may initially cover more than one function, but high-risk approvals should retain appropriate separation and independent review. The exact assignment depends on staff competence and availability.

8. Enterprise workflow and departmental handoffs

Samrudhi Agentic OS should orchestrate work through a consistent workflow contract.

01 · Commercial Commitment

SAL closes approved scope and commercial terms

02 · Client Onboarding

CEX captures client knowledge, requirements and approvals

03 · Delivery Planning

OPS translates scope into tasks, timelines and capacity

04 · Specialist Production

CRT and/or PMG execute approved deliverables

05 · Quality & Assurance

Operational QA and independent risk-based checks

06 · Client Approval & Release

CEX obtains approvals; authorised workflows publish

07 · Performance Measurement

DAT validates results, outcomes and evidence

08 · Financial Measurement

FIN calculates billing, costs and contribution

09 · Continuous Improvement

OPS improves processes; TEC deploys changes; GOV verifies

TEC supplies infrastructure throughout the workflow, while CEO provides enterprise oversight and GOV maintains independent assurance.

9. Enterprise responsibility matrix

A = accountable owner; R = responsible executor; C = consulted; I = informed.

Business process	A	R	C
Sales qualification	Vikram	SAL	MKT
Contract and pricing approval	Human commercial owner	SAL	FIN
Client onboarding	Mitra	CEX	OPS
Delivery scheduling	Daksh	OPS	CRT / PMG
Content production	Aarya	CRT	CEX

production			
Healthcare claim approval	Authorised human reviewer	CRT	GOV
Client campaign performance	Tejas	PMG	DAT
Data quality and reporting	Medha	DAT	Source departments
Financial reporting	Niti	FIN	DAT
Platform operation	Sutra	TEC	OPS
Agent certification	Human governance owner	GOV	TEC
Independent incident assurance	Human governance owner	GOV	Affected department

The matrix must be expanded into workflow-level RACI records during SOP development.

10. Digital Workforce Management System — Master Data Architecture

The DWMS should be the authoritative system for digital workforce identity, permissions, competency, capacity and performance.

A. Proposed core data entities

Entity	Key fields	Primary owner
Agent Master	Canonical ID, name, lifecycle status, human owner	TEC
Position Master	Position ID, department, role, reporting line	CEO / OPS
Agent Assignment	Canonical ID, position ID, effective dates	CEO / TEC

Role Specification	Responsibilities, KRAs, authority, interfaces	Functional head
Competency Profile	C0–C5 by skill, evidence, expiry	GOV
Capacity Profile	Validated throughput, concurrency, limits	OPS / TEC
Tool Permissions	Tool, action, tenant, scope, expiry	TEC
Workflow Registry	Process ID, owner, steps, approval gates	OPS
Execution Record	Run ID, outputs, timing, costs, status	TEC
Evaluation Record	Criteria, scores, evaluator, evidence	GOV
Feedback Record	Issue, severity, owner, corrective action	GOV / OPS
Change Record	Version, test results, approval, rollback	TEC
Cost Ledger	Tokens, API calls, human time, allocations	FIN
Client/Tenant Master	Client ID, permissions, retention policies	CEX / TEC

Required relationships

A canonical agent can have multiple position assignments. A position can have successive agents over time. Each execution must reference the specific agent identity, approved version, workflow and client scope.

This avoids the common mistake of using a display name as the permanent identifier.

B. Agent lifecycle states

State	Meaning	Production authority

Proposed	Role identified	None
Registered	Identity created	None
Configured	Tools and workflow configured	None
Testing	Under evaluation	Sandbox only
Certified	Competency approved	Not necessarily active
Active	Approved for assigned production scope	Defined permissions
Restricted	Some or all permissions suspended	Limited
Retired	No longer authorised	None

A certified agent should not automatically become active. Deployment remains a separate approval.

11. Competency, capacity and performance standards

Competency

Retain the approved six-level scale: C0 Unverified, C1 Foundation, C2 Operational, C3 Advanced, C4 Expert and C5 Orchestrator.

Competency must be recorded by skill rather than only as one overall grade. For example, an agent may be C4 in healthcare copywriting but C1 in video scripting.

Capacity

Define capacity as successful, quality-validated workload completed within a stated time and cost envelope.

For each agent, capture:

Metric	Required measure
Throughput	Accepted work units per hour/day
Concurrency	Safe simultaneous executions
Quality floor	Minimum acceptable pass rate
Latency	Median and high-percentile completion times
Unit cost	Cost per accepted task

Recovery	Retry and failure-handling capability
Human dependency	Approval/review time
Saturation point	Load at which quality or reliability deteriorates

Capacity cannot be inferred from the theoretical throughput of the underlying AI model.

Performance

Retain the proposed five-dimensional framework:

Dimension	Default weight
Quality	30%
Efficiency	25%
Reliability	20%
Business contribution	15%
Feedback and adaptability	10%

Critical compliance violations override aggregate scores.

Performance evaluations should occur at execution, daily, weekly, monthly and quarterly levels, with frequency adjusted to risk.

12. Enterprise command centre

Arjun — Enterprise Operating Dashboard

Proposed management interface; all metrics require source integration and validation

Uptime · Integrations · Incidents
Assurance
Certifications · Risks · CAPA

13. Enterprise KPI architecture

Dimension	Enterprise KPI	Primary owner
Growth	New MRR and sales conversion	Vikram
Retention	Client retention and client health	Mitra
Delivery	On-time accepted deliverables	Daksh
Quality	First-pass acceptance and critical defects	Aarya / GOV
Marketing outcomes	Qualified leads and acquisition efficiency	Tejas
Financial performance	Client contribution and cash flow	Niti
Workforce performance	Agent quality, capacity and cost	OPS / DAT / GOV
Reliability	Workflow success and platform availability	Sutra
Governance	Certification coverage and unresolved critical risks	Satya

Every KPI requires a documented definition, source, refresh frequency, calculation method, accountable owner and escalation threshold.

14. Pilot organisation — 2–3 healthcare clients

The initial content and social media pilot should use the enterprise architecture without deploying every organisational position.

Minimum viable digital workforce

Function	Accountable role	MVP implementation

Enterprise oversight	Arjun	Management brief and escalation workflow
Client requirements	Mitra / Shruti	Structured intake and client knowledge
Delivery planning	Daksh / Yojana	Task queue, calendar and status tracking
Content strategy	Aarya / Disha	Editorial planning workflow
Content research	Anvesh	Research and source evidence
Copywriting	Lekha	Drafting workflow
Creative production	Chitra	Visual production tools
Quality screening	Shuddhi / Pariksha	Content and platform checks
Publishing	Prakash	Approval-gated scheduler
Reporting	Medha / Prativedan	Validated performance reports
Platform infrastructure	Sutra / Niyantrak	Agent registry, workflows, telemetry
Independent assurance	Satya / Gunvatta	Evaluation and escalation controls
Cost intelligence	Niti / Lagaat	Per-deliverable cost accounting

These responsibilities can be implemented with a substantially smaller number of actual AI deployments.

Pilot release gates

Gate	Required evidence
G0 — Client consent	Approved pilot scope, access and

	data handling
G1 — Workflow readiness	Tested intake-to-publishing process
G2 — Agent readiness	Competency tests and approved permissions
G3 — Controlled production	Human-reviewed content and approved publishing
G4 — Performance validation	Accepted outputs, quality, cost and SLA evidence
G5 — Expansion approval	Demonstrated reliability, economics and client acceptance

Illustrative 90-day sequence

Days 1–30

Foundation

Build the controlled workflow

Establish agent registry, client knowledge boundaries, intake, content generation, approval gates, execution logs and baseline evaluations.

Days 31–60

Live pilot

Operate with 2–3 clients

Run actual content cycles, measure first-pass acceptance, revision burden, delivery time, human review effort and cost per accepted deliverable.

Days 61–90

Optimisation

Validate economics and scalability

Benchmark capacity, eliminate recurring defects, certify stable workflows and decide whether to add clients or expand service capabilities.

The timeline is a proposed implementation plan, not a guaranteed deployment schedule.

15. Agent role documentation programme

Once this master architecture is approved, each role will be documented using the agreed 18-section role clarity standard.

Section	Required content
01	Document control
02	Agent identity
03	Role purpose

04	Reporting and accountability
05	Attributes and operating characteristics
06	Key result areas
07	Detailed responsibilities
08	Workflows and SOP references
09	Deliverables and acceptance standards
10	Decision authority and restrictions
11	Competency requirements
12	Capacity framework
13	KPIs and performance thresholds
14	Feedback and evaluation
15	Exceptions and escalation
16	Continuous improvement
17	Interfaces and dependencies
18	Acceptance and deployment criteria

Four standard documents per agent

Artifact A — Role Clarity & Accountability: What the agent does, owns and delivers.

Artifact B — Competency & Capacity Framework: What it must be capable of doing, and at what validated throughput.

Artifact C — Performance Management & Evaluation: How performance is scored, independently tested and improved.

Artifact D — Digital Workforce Registry Record: The structured configuration and governance data required for DWMS.

Each agent will also receive a one-page operational role card.

16. Master architecture acceptance criteria

Before treating Document 01B as formally approved, the following must be completed:

- Reconcile all 194 positions against canonical identities.
- Confirm final executive reporting relationships.
- Assign a human accountable owner to each critical function.
- Approve departmental authority boundaries.

- Finalise the initial client content-production workflow.
- Confirm minimum viable agent deployments and infrastructure.
- Approve competency and capacity evaluation standards.
- Establish independent assurance and incident escalation.
- Define the initial enterprise and pilot scorecards.
- Approve the role-documentation sequence.

Recommended next document

Document 01C — Samrudhi Digital Workforce Canonical Registry & Consolidated Organisation Chart

This should be the final bridge between organisational planning and individual agent documentation. It will assign permanent canonical IDs to the specialist agents, map every department position to an identity, identify reusable technical services and establish the definitive reporting hierarchy.

Once that register is locked, we can proceed to Agent 001 — Arjun, AI CEO, developing all four role documents in detail.

The critical distinction at this stage is that the organisation design is complete at the departmental level, but the digital workforce registry and actual deployment architecture are not yet finalised. Completing that reconciliation first will make every subsequent agent role document consistent, traceable and implementation-ready.

SAMRUDHI AGENTIC AI

Document 01C | Canonical Digital Workforce Registry & Consolidated Organisation Chart

Enterprise Digital Workforce — Master Registry V1.0

Organisation: Samrudhi Healthcare Digital Parent organisation: Nushift Technologies Pvt Ltd Operating infrastructure: Samrudhi Agentic OS + Digital Workforce Management System (DWMS) Scope: 11 departments · 194 proposed positions Document status: Consolidated registry — proposed for approval

1. Purpose

This document converts the eleven departmental organisation designs into one unified digital workforce register.

The objectives are to:

- Assign a permanent canonical identity to every proposed digital worker.
- Establish reporting relationships and departmental accountability.
- Eliminate duplicate identities and overlapping technical responsibilities.
- Separate organisational roles from runtime deployments.
- Define the deployment sequence for the initial 2–3-client content and social media pilot.
- Create the authoritative foundation for individual agent role-clarity, competency, capacity and performance documents.

Important distinction: This registry defines 194 proposed logical positions. It does not mean Samrudhi needs to operate 194 independent AI model instances.

2. Canonical identification system

Every digital worker will have three identifiers.

Identifier	Example	Purpose
Canonical Agent ID	SAM-AG-001	Permanent identity of the digital worker
Position ID	CRT-008	Organisational role and departmental assignment
Runtime ID	RUN-CRT-001	Actual deployed technical instance or service

A canonical identity must remain stable even if the agent changes models, versions, runtime infrastructure or department assignments.

Naming conventions

Object	Format
Agent identity	SAM-AG-###
Executive identity	Existing SAM-EX-### retained as legacy aliases
Independent evaluator	Existing SAM-EV-### retained as legacy aliases
Position	DEPT-###
Workflow	DEPT-P##
Agent role document	SAM-ROLE-###
Competency record	SAM-COMP-###
Capacity record	SAM-CAP-###
Evaluation record	SAM-EVAL-###
Runtime deployment	RUN-###

The registry will use SAM-AG-### as the single canonical identity namespace, while retaining earlier executive and evaluator IDs as searchable aliases.

3. Consolidated executive organisation chart

SAM-AG-009	Medha	DAT-001	SAM-EX-009
SAM-AG-010	Satya	GOV-001	SAM-EV-001

Shared executive assignment: Vikram also oversees MKT, but this does not create a second canonical identity.

4. Department-level registry

The following tables assign stable canonical IDs to the remaining proposed positions. These are provisional assignments, subject to approval of the complete registry.

Department 01 — CEO Office & Enterprise Strategy

Canonical ID	Position	Agent	Role
SAM-AG-001	CEO-001	Arjun	AI CEO
SAM-AG-011	CEO-002	Sankalp	Strategic Planning
SAM-AG-012	CEO-003	Lakshya	Enterprise KPI Intelligence
SAM-AG-013	CEO-004	Samanvay	Executive Coordination
SAM-AG-014	CEO-005	Nirnay	Decision Intelligence
SAM-AG-015	CEO-006	Pragati	Initiative & Milestone Tracking

Department positions: 6 Canonical identities: 6

Department 02 — Sales & Business Development

Canonical ID	Position	Agent	Role
SAM-AG-005	SAL-001	Vikram	AI Chief Growth Officer
SAM-AG-016	SAL-002	Aarav	Sales Operations & Pipeline Lead
SAM-AG-017	SAL-003	Tara	Revenue Intelligence & Forecasting Lead
SAM-AG-018	SAL-004	Khoj	Prospect Research
SAM-AG-019	SAL-005	Lakshit	Lead Qualification
SAM-AG-020	SAL-006	Sampark	Outbound

			Prospecting
SAM-AG-021	SAL-007	Amantran	Meeting Coordination
SAM-AG-022	SAL-008	Samvaad	Sales Discovery
SAM-AG-023	SAL-009	Prastav	Proposal Development
SAM-AG-024	SAL-010	Anubandh	Commercial & Contract Coordination
SAM-AG-025	SAL-011	Anugrah	Sales Follow-up
SAM-AG-026	SAL-012	Vistaar	Upselling Intelligence
SAM-AG-027	SAL-013	Setu	Sales-to-Onboarding Handover

Department positions: 13 Canonical identities: 13

Department 03 — Samrudhi Brand & Marketing

Canonical ID	Position	Agent	Role
SAM-AG-028	MKT-001	Prerna	Head of Brand & Marketing
SAM-AG-029	MKT-002	Aditi	Brand Strategy
SAM-AG-030	MKT-003	Uday	Demand Generation
SAM-AG-031	MKT-004	Vaani	Content & Thought Leadership
SAM-AG-032	MKT-005	Nayan	Digital Channels & Website
SAM-AG-033	MKT-006	Spandan	Healthcare Market

			Intelligence
SAM-AG-034	MKT-007	Akriti	Brand Identity
SAM-AG-035	MKT-008	Katha	Editorial Content
SAM-AG-036	MKT-009	Tarang	Social Media & Community
SAM-AG-037	MKT-010	Drishya	Creative Production
SAM-AG-038	MKT-011	Shikhar	SEO & Organic Growth
SAM-AG-039	MKT-012	Abhiyan	Campaign Planning
SAM-AG-040	MKT-013	Sahyog	Partnerships & Events
SAM-AG-041	MKT-014	Pravah	Marketing Automation
SAM-AG-042	MKT-015	Maanak	Marketing Analytics
SAM-AG-043	MKT-016	Pratidhwani	PR & Reputation

Department positions: 16 Canonical identities: 16

Vikram remains the overseeing executive through a secondary reporting assignment, not an additional MKT position.

Department 04 — Client Experience & Account Management

Canonical ID	Position	Agent	Role
SAM-AG-004	CEX-001	Mitra	AI Chief Client Experience Officer
SAM-AG-044	CEX-002	Sneha	Client Success Lead
SAM-AG-045	CEX-003	Saarthi	Client

			Operations Lead
SAM-AG-046	CEX-004	Sparsh	Client Experience Quality
SAM-AG-047	CEX-005	Samriddhi	Retention & Growth
SAM-AG-048	CEX-006	Swagat	Client Onboarding
SAM-AG-049	CEX-007	Smriti	Client Knowledge
SAM-AG-050	CEX-008	Shruti	Client Brief & Requirements
SAM-AG-051	CEX-009	Sandesh	Client Communication
SAM-AG-052	CEX-010	Sweekriti	Client Approval
SAM-AG-053	CEX-011	Samiksha	Client Review Intelligence
SAM-AG-054	CEX-012	Sahay	Client Support
SAM-AG-055	CEX-013	Samadhan	Complaint & Escalation
SAM-AG-056	CEX-014	Nabz	Client Health
SAM-AG-057	CEX-015	Navikaran	Contract Renewal
SAM-AG-058	CEX-016	Vardhan	Account Expansion

Department positions: 16 Canonical identities: 16

Department 05 — Operations & Delivery Management

Canonical ID	Position	Agent	Role
SAM-AG-002	OPS-001	Daksh	AI COO

SAM-AG-059	OPS-002	Yojana	Delivery Planning Lead
SAM-AG-060	OPS-003	Niyojan	Resource & Capacity Lead
SAM-AG-061	OPS-004	Pravartan	Workflow Orchestration Lead
SAM-AG-062	OPS-005	Nirikshan	Delivery Control Lead
SAM-AG-063	OPS-006	Unnati	Operational Excellence Lead

Department positions: 20 Canonical identities: 20

5. Registry reconciliation results

Master Registry Summary

11

Departments

194

Positions

194

Provisional identities

10

Executive / assurance heads

What has been reconciled

- All 194 departmental positions have been assigned canonical IDs.
- The previously agreed executive aliases are preserved.
- Vikram's shared oversight of MKT does not create a duplicate identity.
- The permanent names Darshan, Lakshman and Smaran resolve earlier provisional labels.
- All eleven departments retain their previously defined scope.
- The organisation separates independent assurance from operational delivery.

Remaining naming and implementation issues

Two pairs require attention before the registry is locked:

Names	Issue	Recommended resolution
Maanak (MKT-015) / Manak (DAT-006)	Visually and phonetically similar	Rename DAT-006 to Tulak while retaining its assigned ID
Navikaran (CEX-015) / Naveekaran (FIN-016)	Similar names for different renewal functions	Rename FIN-016 to Avartan while retaining its assigned ID

These are proposed naming changes only; canonical IDs and departmental responsibilities remain unchanged.

The current register should therefore be treated as a version-controlled draft, not an immutable production identity database.

6. Digital workforce versus technical deployment

The organisation has 194 logical roles, but those roles should be implemented through a smaller number of coordinated runtime capabilities.

Layer	Responsibility	Deployment approach
Executive agents	Strategy, planning, coordination and escalation	Shared executive orchestration
Functional leads	Manage workflows and specialist outputs	Configured role-based agents
Specialist agents	Perform domain-specific work	Shared model services with distinct role configurations
Deterministic services	Calculations, scheduling, permissions, logging	Conventional software
Independent evaluators	Assess quality, competency and compliance	Isolated evaluation workflows
Human approvers	Exercise reserved decision authority	Approval interface and audit trail

Recommendation: Do not procure or build infrastructure for 194 independent agent instances. Preserve the 194-role accountability architecture while implementing only the capabilities justified by active workflows.

7. Minimum viable digital workforce for the first pilot

The first pilot remains end-to-end content and social media delivery for 2–3 consenting healthcare clients.

Proposed activation roster

Canonical ID	Agent	Pilot responsibility
SAM-AG-001	Arjun	Enterprise oversight and escalation
SAM-AG-002	Daksh	Delivery management

SAM-AG-003	Aarya	Creative accountability
SAM-AG-004	Mitra	Client relationship and approval coordination
SAM-AG-007	Sutra	Technical accountability
SAM-AG-009	Medha	Reporting accountability
SAM-AG-010	Satya	Independent assurance
SAM-AG-050	Shruti	Client brief intake
SAM-AG-059	Yojana	Delivery planning
SAM-AG-076	Disha	Content strategy
SAM-AG-077	Kalpana	Editorial calendar
SAM-AG-080	Shuddhi	Content quality and medical-claim screening
SAM-AG-081	Anvesh	Healthcare research
SAM-AG-082	Lekha	Copywriting
SAM-AG-083	Chitra	Visual creative production
SAM-AG-084	Prakash	Publishing coordination
SAM-AG-094	Pariksha	Technical content QA
SAM-AG-125	Prativedan	Client reporting
SAM-AG-146	Lagaat	Cost-per-deliverable measurement
SAM-AG-158	Niyantrak	AgentOps and DWMS
SAM-AG-162	Pravahika	Workflow execution

SAM-AG-166	Nirikshak	Execution telemetry
SAM-AG-183	Gunvatta	Independent output evaluation
SAM-AG-186	Swasthya	Healthcare content compliance assurance

24
Initial logical roles

8. Digital Workforce Registry — Required data fields
Each canonical identity should have one master record containing:

Category	Required information
Identity	Canonical ID, name, status,

	creation date
Organisation	Department, position, reporting manager
Human governance	Accountable owner, approval authority
Role	Purpose, KRAs, responsibilities, deliverables
Competency	Required and certified C0–C5 skills
Capacity	Validated throughput, concurrency, quality limits
Permissions	Tools, actions, clients, data access
Technical configuration	Model, prompts, workflow and version
Performance	KPI results, evaluations, historical trends
Feedback	Findings, severity, corrective actions
Economics	Tokens, tool costs, human review, unit cost
Assurance	Certification, restrictions, incidents
Lifecycle	Activation, changes, suspension, retirement

The canonical registry should support historical assignments and versions, not overwrite prior records whenever an agent changes roles or models.

9. Organisation-wide accountability rules

The following rules should become mandatory across all eleven departments.

Rule 01 — Identity: No production workflow may execute without a traceable agent or service identity.

Rule 02 — Ownership: Every workflow must have a designated business owner and human escalation authority.
Rule 03 — Competency: Agents may only perform tasks within their tested and approved competency scope.
Rule 04 — Capacity: Assignments must respect validated capacity and concurrency limits.
Rule 05 — Permissions: Tool and data access must be enforced by the platform, not merely requested through prompts.
Rule 06 — Evaluation: Production work must produce sufficient evidence for independent evaluation.
Rule 07 — Financial control: Agents cannot independently authorise or execute financial transfers.
Rule 08 — Client protection: Client data must remain isolated according to approved permissions.
Rule 09 — Change management: Material agent changes require versioning, testing and approval.
Rule 10 — Incident response: Critical failures must trigger containment, escalation and independent verification.

10. Documentation and implementation roadmap

The organisation is now ready to move from department design to individual agent specification.

Stage	Deliverable	Status
01A	Eleven departmental architectures	Completed
01B	Enterprise master architecture	Drafted
01C	Canonical digital workforce registry	Drafted
02A	Individual agent role clarity	Next
02B	Competency and capacity specifications	Pending
02C	Performance and evaluation framework	Pending
02D	Structured DWMS agent records	Pending

03	Departmental SOP and workflow integration	Pending
04	Technical pilot configuration	Pending
05	Controlled pilot and evaluation	Pending

Next document: SAM-ROLE-001 — Arjun, AI CEO

We should now begin the detailed documentation for each agent, one at a time, starting with Arjun — SAM-AG-001.

The document will follow the agreed 18-section format and define Arjun's:

- Organisational purpose and reporting authority.
- KRAs, responsibilities and decision boundaries.
- Executive workflows and department coordination.
- Expected deliverables and acceptance criteria.
- Competency requirements and certification standards.
- Capacity, concurrency and workload limits.
- Performance KPIs and independent appraisal.
- Feedback, escalation and continuous improvement.
- DWMS registry configuration and deployment readiness.

For each agent, we will develop four linked artifacts: Role Clarity & Accountability, Competency & Capacity, Performance Management & Evaluation, and the DWMS Registry Record.

Document 01C outcome: All 194 proposed positions have provisional canonical identifiers and a consolidated reporting architecture. The remaining steps before production activation are formal registry approval, naming resolution, technical configuration, competency certification and validated capacity testing.
